

SERFC Operations Forecasting in SC

South Carolina Meeting
February 3rd , 2016

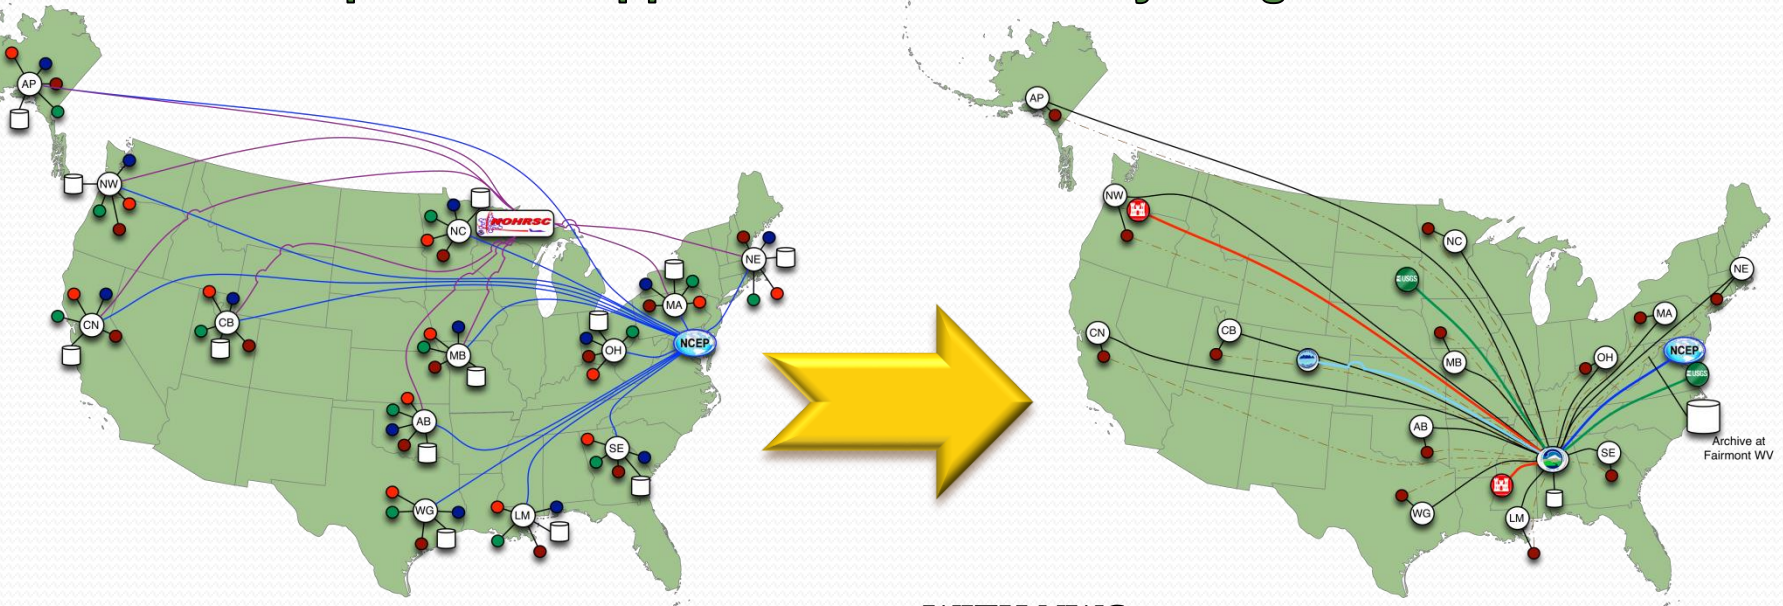

NWS operational Infrastructure

Hydrology Program Data Flow

To enable NWC-provided support and ensure a fully integrated field structure

TODAY

- *Each RFC responsible for all data acquisition, QA/QC, modeling, post-processing, archival and service backup*

-  Archive
-  State/Local Data
-  National External Data
-  Regional External Data
-  Geospatial Data

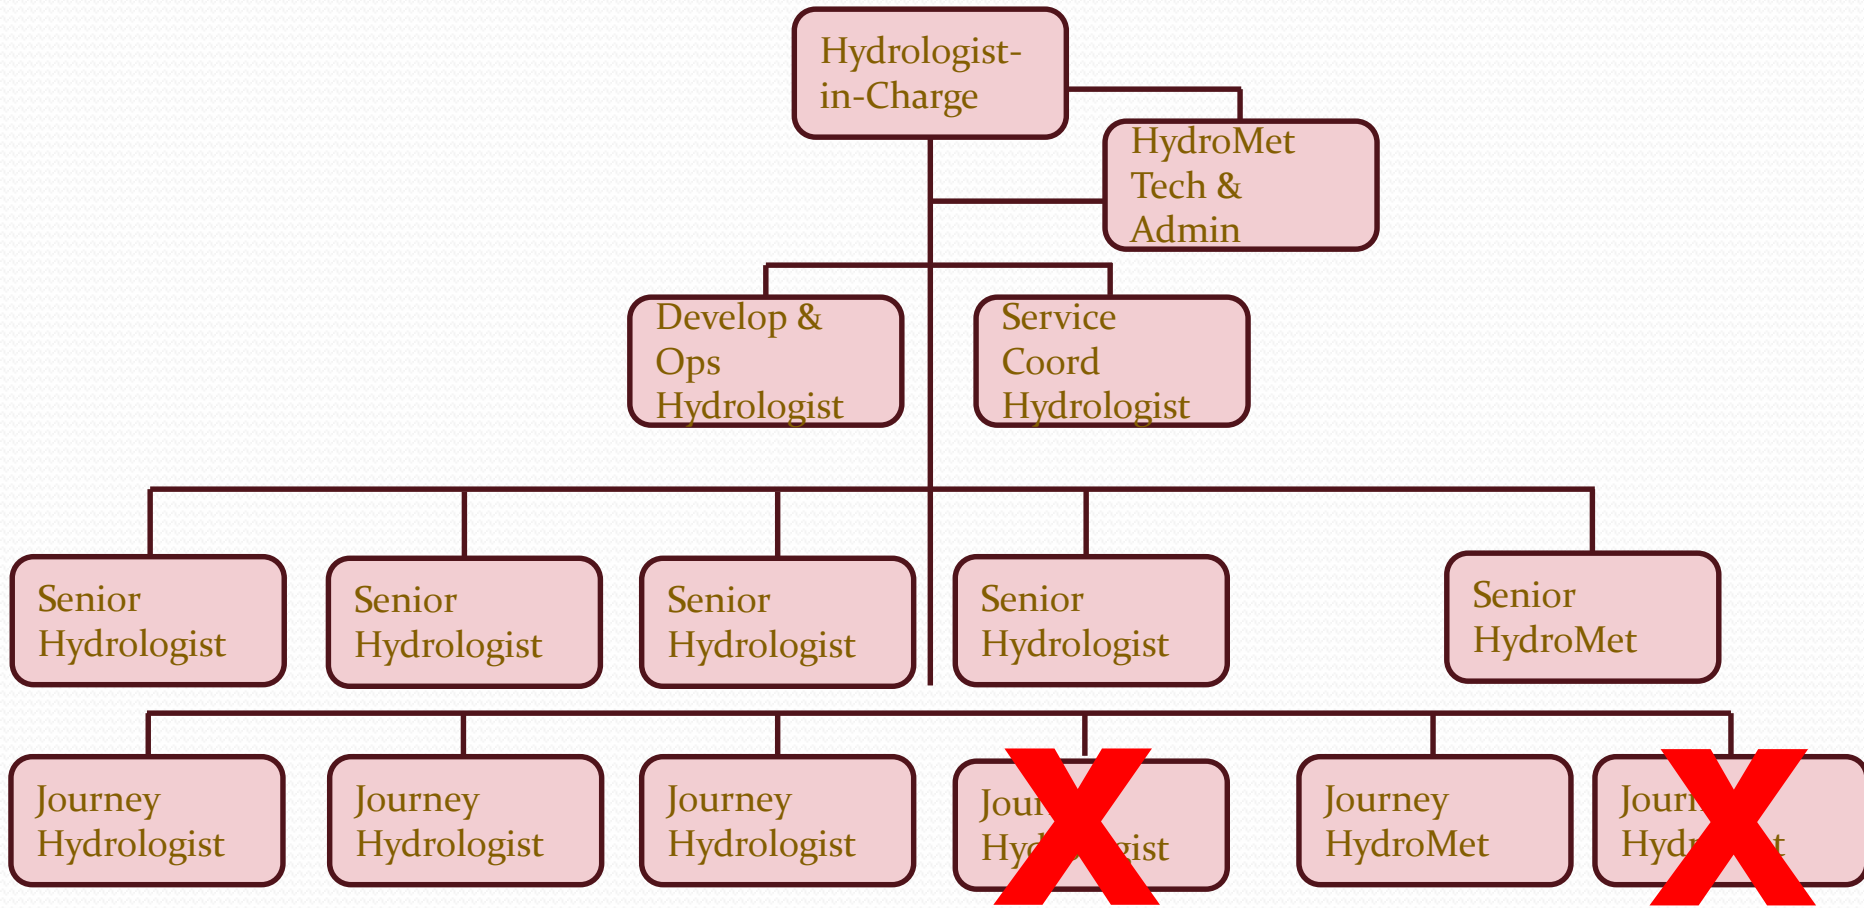

WITH NWC

- *NWC centralizes data acquisition, processing, archival and service backup*
- *RFCs acquire local data, especially anthropogenic, and QA/QC*
- *NWC provides centralized forecast guidance for full spectrum of water parameters*
- *Focal point for threading global-regional-local modeling, forecasting and situational awareness to ensure consistency in products and services*

NWS National Water Center

Staffing Profile

3 civil engineers
 1 Hydrology major
 8 Meteorologists

University of Oklahoma
 Penn State
 Georgia Tech
 Iowa State
 Universidad de Chile

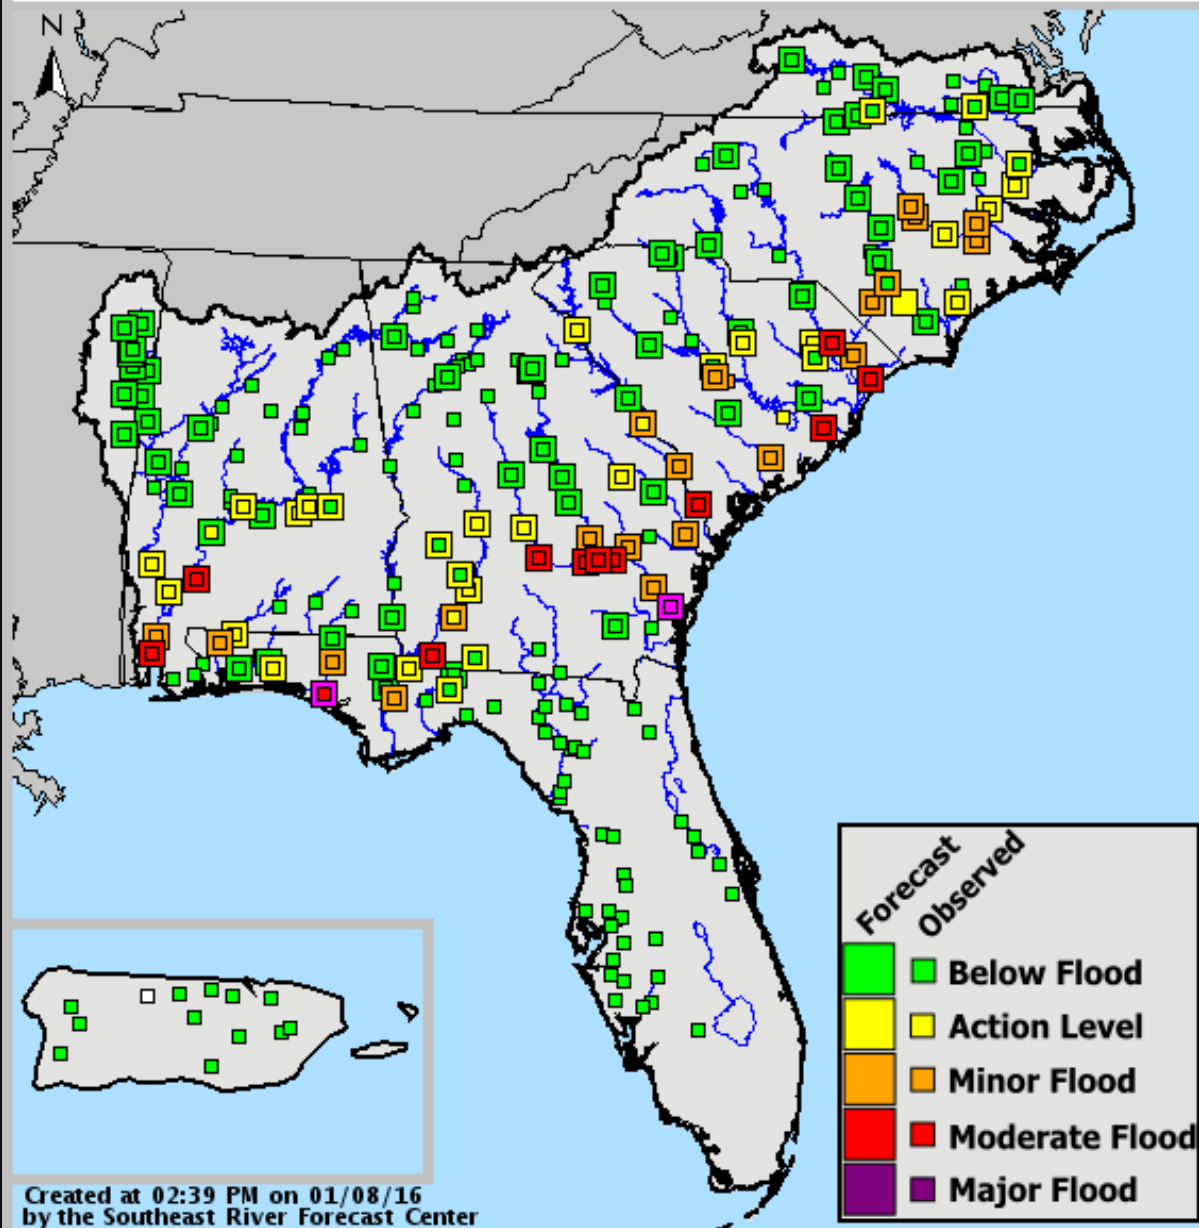

University of Colorado
 University of Arizona

WPC Rainfall Forecast

Hydrologic Forecast Operation Role

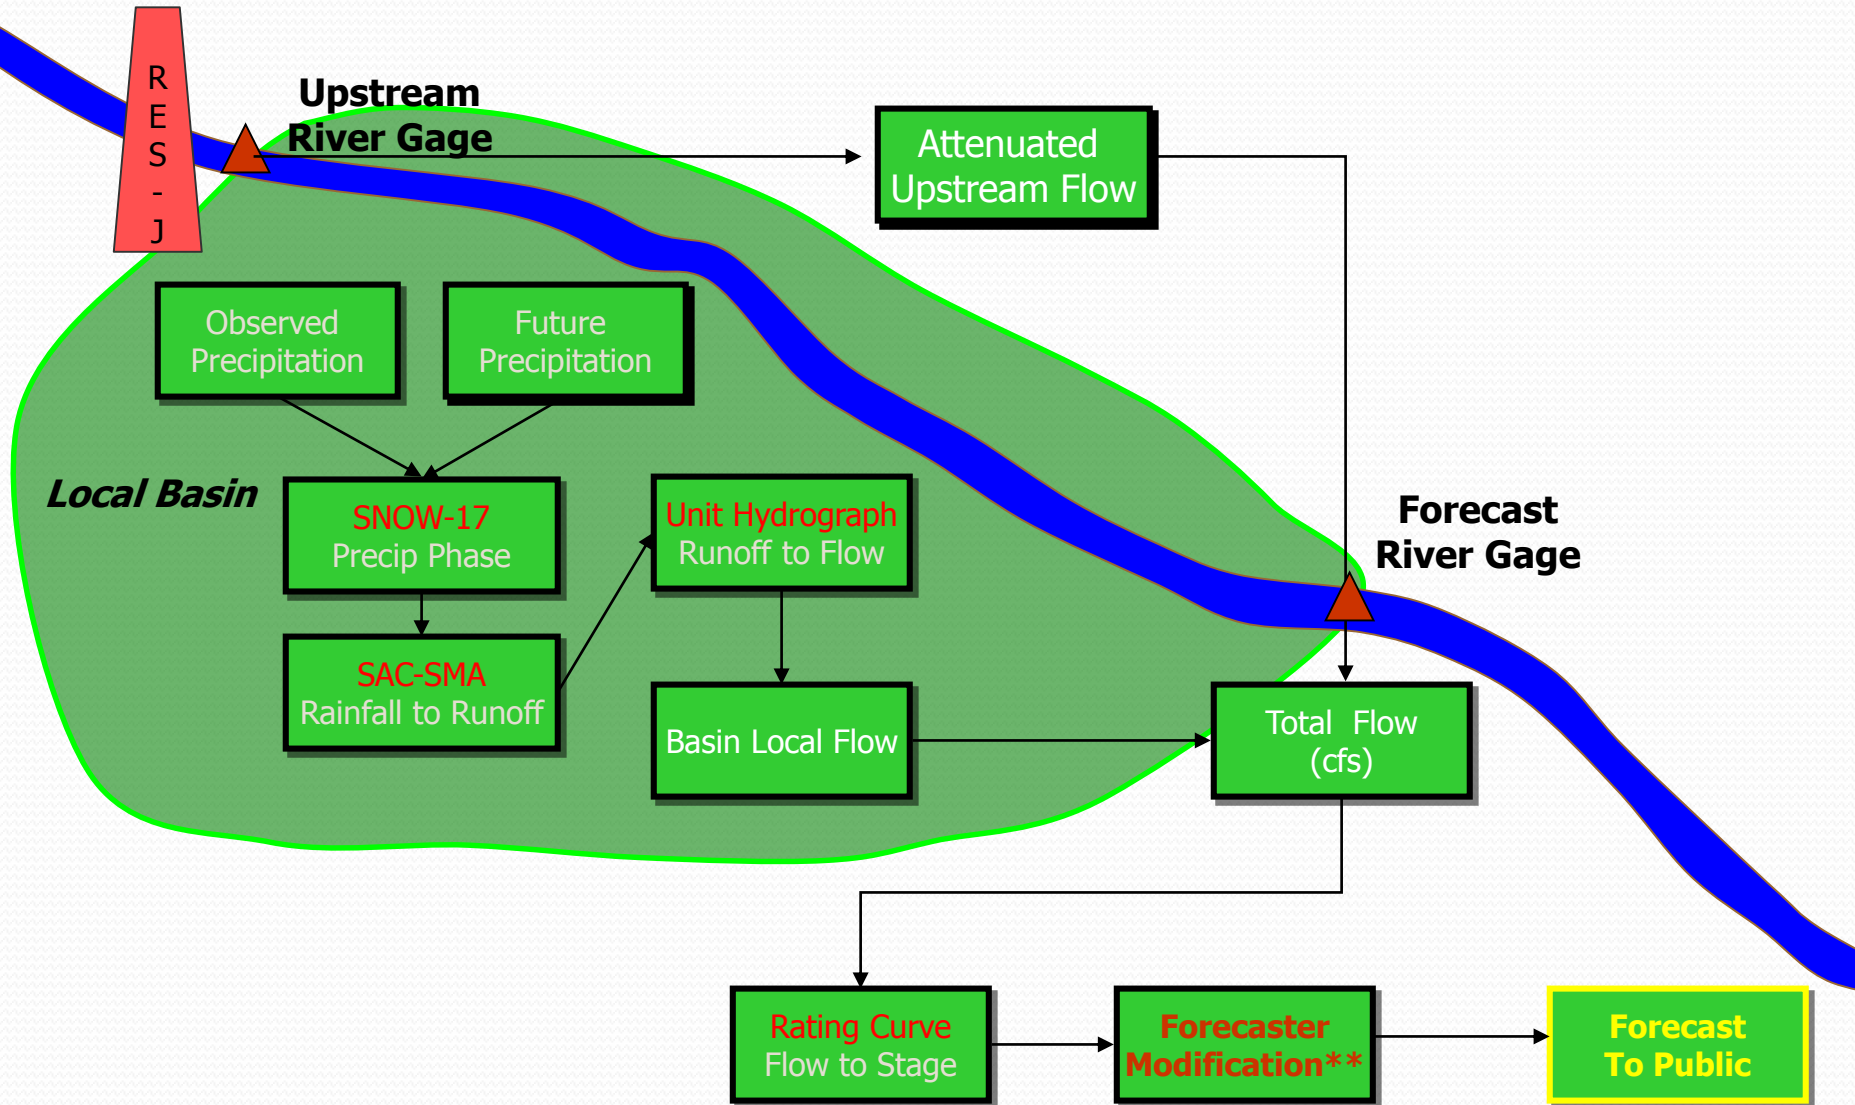

- **SERFC models...**
 - ***Rainfall-runoff processes*** exclusively with the Sacramento Soil Moisture Accounting Model (SAC-SMA). It is continuous, conceptual, lumped-parameter*, and calibrated to streamflow.
 - ***Precipitation phase*** exclusively with the SNOW-17 model.
 - ***Major reservoirs*** exclusively with the RES-SNGL/RES-J model.
 - ***Basin-to-basin hydrograph routing*** with the LAG/K model and a stray HEC-RAS hydraulic model or two.
- **SERFC hydrologic forecasters are also modelers.** The operational forecaster knows the assumptions and limitations of these models and makes modifications when they are violated to generate “forecasts”.

Hydrologic Cycle

Deterministic River Forecasts

How are they created?

**** Forecaster Modification can also happen at any step in the process!**

What the Forecaster Sees

CHRG1: Charlotte - Altamaha R.

What the Public Sees

CONGAREE RIVER AT COLUMBIA

Universal Time (UTC)

Flood Impacts & Photos

Collapse

If you notice any errors in the below information, please contact our Webmaster

- 30 The Essex Park Apartments along the Broad River and I-20 become flooded.
- 28 Flooding begins in low lying areas of the Riverland Park subdivision in Cayce.
- 24 The SCE&G Columbia Canal Hydroelectric Plant at the Gervais Street bridge becomes flooded. Flooding also occurs in the Palmetto Rock Quarry in Cayce.
- 21 Extensive swampland and large areas of farmland and pasture land downstream from Columbia are flooded.
- 19 Extensive swampland and large areas of farmland and pasture land downstream from Columbia become flooded.
- 16 Old State Road, SC 66, below Cayce becomes flooded.
- 14 Roads in low lying areas and swampland downstream from Columbia become flooded. Most of the Cayce and West Columbia river walk is flooded.
- 13 Flooding occurs in flood prone areas near and downstream from Columbia. Flooding also occurs over much of the Cayce and West Columbia river walk.
- 10 At 10 feet, flooding occurs in flood prone areas near and downstream from Columbia. Flooding also occurs on parts of the Cayce and West Columbia river walk.
