SC DEPARTMENT of ENVIRONMENTAL SERVICES

Concrete Batch Plant Exempt List and On-Site Implementation Log (OSIL)

Directions:

For your convenience, these logs may be used to document exempt equipment and OSIL activities. The requirements for these activities can be found under conditions D.1 to D.4 in the permit. Please, review your permit for any additional site-specific requirements that may apply. SCDES is not liable for errors or omissions.

Below is a link to the exempt list maintained by the BAQ:

- BAQ Permitting Exemption List or www.des.sc.gov/airexemptionlist

The OSIL portion of the permit is used to document the installation and/or replacement of control devices including, but not limited to, binvents, baghouses, and dust collectors, and the installation and/or replacement of storage silos. Each OSIL entry needs to include the following documentation:

- A brief description of the activity.
- Manufacturer specification sheets for any new equipment or control devices installed
- The date the activity occurred.
- Revised equipment list to include: A unique equipment ID and Manufacture date

Note that it is recommended that facilities also document the removal of equipment.

The permit requires that the exempt list and the OSIL log be submitted to the Department every 5 years. This submission and due date will appear within the facility's "Upcoming" list of reports on the facility's ePermitting Dashboard page.
