Date

EXECUTIVE SUMMARY

The South Carolina Department of Environmental Services (SCDES) and Liberty River, LLC (Liberty) entered into Voluntary Cleanup Contract (VCC) 25-8848-NRP (non-responsible party) for the Liberty Steel property (Property) which includes approximately 66 acres located at 1227 Front Street, Georgetown, Georgetown County, South Carolina (Property). GEL Engineering, LLC (GEL) prepared *Voluntary Cleanup Baseline Site Assessment Work Plan -Revision 1* (Work Plan), dated March 2, 2026, that outlined investigation activities designed to evaluate environmental conditions at the Property. The South Carolina Department of Environmental Services (SCDES) approved the work plan on March 11, 2026.

GEL conducted the Baseline Site Assessment from March to June 2026. The assessment included the collection of surface and subsurface soil samples from 48 locations; collection of 37 groundwater samples from newly installed temporary and permanent monitoring wells and existing monitoring wells; collection of six surface water samples; collection of three sediment samples; and collection of four pore water samples. The samples were analyzed for the parameters specified in the Work Plan.

The following sections summarize the analytical results for soil, groundwater, surface water, sediment, and pore water at the Property.

Soil

- Metals including hexavalent chromium, aluminum, antimony, arsenic, barium, cadmium, cobalt, copper, iron, lead, manganese, mercury, nickel, selenium, thallium, vanadium and zinc were detected at concentrations exceeding applicable residential RSLs in one or more soil samples throughout the Property. Only arsenic, cadmium, iron, lead, manganese, thallium and vanadium were detected at concentrations exceeding RSLs for industrial soils.
- Although background concentrations of the detected metals have been identified in the South Carolina Coastal Plain soil, the metal concentrations in soil are present at concentrations exceeding the upper range of background metal concentrations, suggesting that soils have been impacted by site activities.
- Several SVOCs were detected at concentrations exceeding residential RSLs across the Property; however, none of the concentrations exceed industrial RSLs
- One VOC, methylcyclohexane, was detected at a concentration exceeding its residential and industrial RSLs. The sample (LS-SB-27-4.0) was collected near the former Riverside Oil Company building.

- The PCBs Aroclor 1242 and Aroclor 1254 were detected at concentrations exceeding their respective residential soil RSLs in one sample (LS-SB-25-3.0) from near the WWTP.
- Cyanide and pesticides did not exceed screening levels in any of the soil samples

Groundwater

- Groundwater generally flows to the east and southeast toward the Sampit River.
- Metals including hexavalent chromium, aluminum, antimony, arsenic, chromium, cobalt, iron, lead, manganese, nickel, selenium, vanadium and zinc were detected at concentrations exceeding applicable tapwater RSLs in one or more unfiltered groundwater samples. Only antimony, arsenic, chromium, and selenium exceeded their respective MCLs.
- Dissolved hexavalent chromium, aluminum, antimony, arsenic, cobalt, iron, lead, manganese, selenium, silver, and vanadium were detected at concentrations exceeding applicable MCLs or tapwater RSLs in one or more filtered groundwater samples, indicating that metals results are not strictly related to sample turbidity.
- The SVOCs 2-methylnaphthalene, benzo(a)anthracene, bis(2-Ethylhexyl)phthalate, and naphthalene were detected in two or more groundwater samples at concentrations exceeding MCLs or tapwater RSLs. Only bis(2-Ethylhexyl)phthalate exceeded it's respective MCL. The exceedances were in temporary
- well TW-10 near the fuel oil ASTs and existing wells MW-20, MW-23 and CA-3 near the coil compactor area.
- The only VOCs detected in groundwater were chlorinated compounds including 1,1-DCA, 1,1-DCE, 1,2-DCA, cis-1,2-DCE, MC, PCE, TCE, and VC. The detected concentration of 1,1-DCA exceeded its tapwater RSL only. Concentrations exceed MCLs or tapwater RSLs only in existing wells MW-23 and CA-3 near the coil compactor area. No VOCs were detected in the deep well (LS-MW-28D) installed for this assessment located near existing well MW-23.
- PFAS compounds, PFPrOPrA, PFDA, PFHxS, PFOS, and PFOA, exceed their respective tapwater RSLs or MCLs in one or more groundwater samples from all of the wells analyzed for PFAS (LW-MW-17, LS-MW-19, LS-MW-20, LS-MW-24, and LS-MW-27). PFOS and PFOA were also detected in the plant water supply at levels exceeding MCLs.

Surface Water

- Total antimony (LS-SW-02, LS-SW-03, LS-SW-04) and total lead (LS-SW-01, LS-SW-04, LS-SW-05) in the surface water samples exceed their respective MCLs or water and organism screening level. Dissolved antimony and lead in field filtered samples did not exceed

screening levels indicating that the total results were partially the result of sample turbidity and not reflective of surface water quality.

- Total and dissolved mercury in samples LS-SW-02, LS-SW-03, and LS-SW-04 exceeded the "water and organism" and "organism only" screening levels.
- VC slightly exceeded the MCL in sample LS-SW-04 which is located downgradient of the coil compactor area.

Sediment

- Antimony, arsenic, cadmium, chromium, copper, lead, mercury, nickel, and zinc were detected at concentrations exceeding their respective ESVs in sediment sample LS-SD-01 and its field duplicate. Chromium, copper, and zinc also exceed ESVs in samples LS-SD-02 and LS-SD-03, and nickel also exceeds its ESV in LS-SD-02.
- The SVOCs, benzo(a)anthracene, benzo(a)pyrene, bis(2-ethylhexyl)phthalate, chrysene, fluoranthene, phenanthrene, and pyrene exceed their respective ESVs in sediment sample LS-SD-01 and its field duplicate.

Porewater

- Hexavalent chromium, aluminum, antimony, arsenic, beryllium, cadmium, chromium, cobalt, iron, lead, manganese, mercury, vanadium, and zinc were detected in one or more filtered and/or unfiltered pore water samples, at concentrations exceeding tapwater RSLs, MCLs or surface water screening levels. The majority of the exceedances were in unfiltered samples suggesting that the metals results were largely the result of sample turbidity.
- Concentrations in filtered samples (dissolved metals) exceeded screening levels for hexavalent chromium, antimony, arsenic, beryllium, cobalt, iron, manganese, and vanadium in one or more pore water samples.
- The PAHs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were detected at concentrations exceeding applicable tapwater RSLs, MCLs, or surface water screening levels in one sample (LS-PW-04).
- VOCs were not detected at concentrations exceeding screening levels in pore water.
- Several PFAS compounds were detected in the four pore water samples and one field duplicate collected at the Property. PFDA, PFHxS, PFOS, and PFOA were detected at concentrations exceeding tapwater RSLs or MCLs in one or more of the porewater samples. Only PFHxS, PFOS, and PFOA exceeded their respective MCL in each of the porewater samples collected.

The data from this investigation indicate that constituents of potential concern, including metals, SVOCs, VOCs and PFAS compounds are present at the Property in soil, groundwater, sediment, surface water and pore water at concentrations exceeding applicable screening levels. It is recommended that a Media Management Plan be prepared for SCDES approval to limit the exposure to impacted media which may be encountered during proposed redevelopment activities.

Additionally, the current owner, Liberty Steel is removing all structures on the Property down to the concrete slabs. During site redevelopment activities by Liberty, the remaining concrete slabs will be removed. At that time, GEL will prepare a subslab soil assessment work plan for SCDES review and approval.

1.0 INTRODUCTION

The South Carolina Department of Environmental Services (SCDES) and Liberty River, LLC (Liberty) entered into Voluntary Cleanup Contract (VCC) 25-8848-NRP (non-responsible party) for the Liberty Steel property (Property) located at 1227 Front Street, Georgetown, Georgetown County, South Carolina. The Property includes approximately 66 acres identified by Georgetown County Tax Map Serial Numbers 05-0025-059-03-00 (0.42 acres), 05-0028-022-00-00 (1.5 acres), 05-0028-023-01-00 (8.43), 05-0028-022-01-00 (0.51 acres), 01-0439-003-01-00 (7.5 acres), 05-0025-048-00-00 (0.45 acres), 05-0026A-001-00-00 (35.9 acres), 05-0026A-002-00-00 (9.1 acres), 05-0025-053-00-00 (0.22 acres), 05-0025-052- 00-00 (0.25 acres), 05-0025-057-00-00 (1.0 acre), and 05-0025-047-00-00 (0.5 acres). The location of the Property is shown on **Figure 1**, and a detailed site map is included as **Figure 2**.

GEL Engineering, LLC (GEL) prepared *Voluntary Cleanup Baseline Site Assessment Work Plan - Revision 1* (Work Plan), dated March 2, 2026, that outlined investigation activities designed to evaluate environmental conditions at the Property, thereby fulfilling the requirements of the VCC. SCDES approved the work plan as written in a letter dated March 11, 2026. This *Baseline Site Assessment Report* presents the results and evaluations of the activities conducted during the assessment.

1.1 Site Description and Layout

The Property is developed with an electric arc furnace (EAF) steelmaking plant that manufactured wire rod in coils. The plant is currently idled and the bag house and melt shop have been demolished by Liberty Steel. Liberty Steel intends to demolish all of the remaining structures. The major production equipment includes two alternating current EAFs, two ladle metallurgy stations, pre-heat furnace, casting machine, reheat furnace, and wire rolling mill. Support facilities include the rolling mill, casting area, melt shop, drum storage, offices, baghouse, receiving warehouse, guard shack, office trailer, maintenance shops, coil compacting area, mobile equipment shop, warehouse (also used to produce wire mesh), wastewater treatment plant (WWTP), mold repair shop, utility building, exterior storage areas, and dock (owned by Georgetown County). The northeast portion of the Property is the location of the former Direct-Reduced Iron (DRI) plant, which was removed in 2020-2021.

The area between the main mill and dock were used to store scrap metals, slag, mill scale, and other materials, and the southernmost parcels were used to store various materials including wire soils, slag and other unknown piles. Several rail spurs are located on the Property.

The Property was historically part of the Serenity Rice Plantation dating back to 1710 and operated until after the Civil War. Atlantic Coast Lumber operated a large lumber mill on the Property until the Great Depression. Prior to development of the steel mill, other site operators include Georgetown Chemical Works, a portion of American Cyanamid, Standard Oil Company, Riverside Oil Company, Georgetown Veneer, and Georgetown Plywood.

1.2 Environmental Assessment and Conditions

A Phase I Environmental Site Assessment (ESA) was conducted by GEL with a report dated April 25, 2025. The following recognized environmental conditions (RECs) were identified at the locations shown in **Figure 3** during the completion of the ESA:

- The historic uses of the Property as a steel mill, Atlantic Coast Lumber, Georgetown Chemical Works, a portion of American Cyanamid, Standard Oil Company, Riverside Oil Company, Georgetown Veneer, and Georgetown Plywood are considered RECs based on the potential to impact site soils and/or groundwater.

- The Property operated as a steel mill under various entities, including Georgetown Steel, ArcelorMittal, and most recently, Liberty Steel. These operations used a variety of chemicals and generated multiple waste streams. During years of site operations, multiple spills and releases have occurred. It is likely that prior to implementation of current environmental regulations, similar spills and releases occurred that were not contained using present-day requirements. The use of chemicals and generation of waste is considered a REC.

- Several offsite facilities are considered RECs based on their likely or known use of chemicals of concern, including:
    - Two dry cleaners along S. Fraser Street,
    - Two former facilities with gas tanks along S. Fraser Street,
    - Four former filling stations along Front Street, and
    - Four auto service facilities along S. Fraser Street.
    - American Cyanamid, which was partially located on the southeast portion of the Property. The area is now occupied by USALCO and its alum ponds.

- A release of hydraulic oil has occurred in the coil compacting area. Prior soil and groundwater assessments have identified petroleum, chlorinated solvents, and hydraulic

oil in this area. The source area of the petroleum and chlorinated solvents is unknown, but may be a result of an offsite source along S. Fraser Street and/or former onsite operations. Two belt skimmers are currently in operation to remove free-product hydraulic oil in this area. The hydraulic release and ongoing remediation is considered a REC.

- The chlorinated solvents identified in the coil compacting area in 2012 have not been fully assessed. The observed concentrations near the hydraulic oil release area are well above South Carolina Maximum Contaminant Levels (MCLs) for groundwater. Additionally, the 2012 assessment identified chlorinated solvents in manholes that were sampled and may be discharging to the WWTP and/or Sampit River. The presence of chlorinated solvents in site soils and groundwater is considered a REC.

- The facility is developed with a WWTP that receives process water and stormwater from the facility. At one point the WWTP was closed-out with SCDES approval, but was re-opened after Liberty Steel purchased the site in 2017. During WWTP closure, a crack was observed in the sludge drying bed, which could result in a release of wastewater into the underlying soil and groundwater. Additionally, process water and wastes are directed to the WWTP via underground drains, piping, and trenches. Sludges from the WWTP are stored onsite and subject to infiltration and overflow due to rainwater. Due to the unknown integrity of the WWTP, associated discharge conveyances, and sludge storage, the WWTP system is considered a REC.

- Significant waste material from the steelmaking process was identified in the electric arc furnace (EAF) melt shop/furnace and lime silo at the entrance to the EAF melt shop. The dust generated by the steelmaking process is a Resource Conservation and Recovery Act (RCRA) hazardous waste (hazardous waste code K061). Additionally, slag and mill scale produced during steelmaking can also be sources of metals. A prior RCRA inspection noted that baghouse waste was stored in open drums and observed on the top of a drum. The potential presence of these various materials in the EAF melt shop and baghouse area is a REC.

- Several sumps or subgrade structures are located throughout the Property. The integrity of the structures could not be evaluated during the site reconnaissance and are considered RECs, including:

- Much of the equipment in the rolling mill has a subgrade pit to capture mill scale and other materials, including the scale pit. The pit contains water that is a result of stormwater and groundwater infiltration.
- Small sumps were observed to the north of the main mill building near the cooling tower.
- A sump and a covered subgrade structure were observed near the fuel oil ASTs tank farm along the northern side of the structure.
- A set of sumps were observed near the truck wash area near the southwest portion of the mill property.
- A service pit with water is located in the mobile equipment shop.
- A sump is located behind the containment structure near the mold repair shop.
- A sump is located beneath the work area in the mold repair shop.
- The rolling mill is developed with the Morgan oil cellar, which contains two, 10,000-gallon hydraulic oil above-ground storage tanks (ASTs). The floor and walls of the cellar are covered in oil and a sump reportedly captures the oil.
- A stormwater collection sump is reportedly located near the lime silo, where significant staining was previously observed.

- The Property is developed with several hydraulic systems, including one that has been identified as the source of hydraulic oil groundwater impacts in the coil compacting area. The hydraulic systems are located in the EAF area, rolling mill, and coil compacting area and contain varying quantities of oil, ranging between 50 and 2,800 gallons. The hydraulic systems are considered RECs.

- The exterior areas of the Property have historically been used for storage of scrap iron, debris, DRI pellets, slag, mill scale (material that falls off steel during the manufacturing process), mortar, lime, railroad ties, and other materials, including the southernmost parcel of the Property. The ground surface of the former DRI plant (northeast portion of Property) is covered in DRI pellets. Based on the historical use of the site to store these materials, it is possible they have been used as fill material on the site. Based on the potential to leach metals and other contaminants into site soils, the historic and current exterior storage of these materials is considered a REC.

- Significant staining was observed in the oil storage area in the mobile equipment shop and the waste oil storage area. Rainwater infiltration can occur in both of these areas, both of which were observed to contain water. Due to the potential to overflow their containment, these areas are considered RECs.

- A gasoline AST was observed near the utility building. Although no sheens or indications of a release were observed in the AST's secondary containment, fuel is dispensed via underground piping, the integrity of which could not be evaluated. The AST system is considered a REC.

- The north side of the main mill building is developed with fuel oil ASTs within secondary containment. Based on observations, it appears fuel oil may be transferred via underground piping, and is considered an onsite REC.

- A majority of the production floor is exposed soil. Staining was observed in various locations on the ground surface. Based on the heavy use of various oils, lubricants, and other chemicals over decades of operating a steel mill, the potential exists for accumulation of these materials in site soils and/or groundwater and is considered a REC.

- RCRA records indicate that chlorinated solvents were previously used on the Property, likely in conjunction with machine and maintenance shops. These areas also typically use large quantities of oils and lubricants. Chlorinated solvents are reportedly no longer used on the Property. The historic use of chlorinated solvents is considered a REC.

- The facility is reportedly developed with at least three septic tanks that reportedly receive sanitary waste. The septic tanks do not contain leach fields, so the tanks are pumped out on a routine basis. Due to the unknown integrity of the tanks and the potential to receive non-sanitary waste, the septic tanks are considered a REC.

- The facility was reportedly developed with at least five underground storage tanks (USTs). All USTs have reportedly been abandoned, but no files pertaining to the closure of the systems were identified for review. Two releases occurred in association with the USTs: the first was reported in June 1993 and issued a letter of no further action (NFA) in July 1995 and the second was reported in December 1995 and issued an NFA in March 1990. Based on the lack of closure or assessment files, the former USTs are considered a REC.

Although not considered a REC, large quantities of materials were observed throughout the Property, including oils (ASTs, drums, and buckets), lubricants, laboratory chemicals and other materials used in the manufacturing process. These materials will need to be inventoried, characterized, and disposed in accordance with applicable regulations. The large quantity of chemicals in need of proper disposal is considered a Business Environmental Risk.

Potential asbestos-containing materials are likely located throughout the structures. Prior to renovation or demolition, an asbestos inspection should be conducted to evaluate for the absence/presence of asbestos-containing materials. The potential presence of asbestos-containing materials is considered a Business Environmental Risk.

2.0 SITE ASSESSMENT ACTIVITIES

The activities described herein were conducted in general accordance with the *Work Plan* to assess environmental conditions on the Property as specified by the VCC.

2.1 Assess Waste Materials and Segregated Sources

As described in the *Work Plan*, waste materials and segregated sources specified in the VCC and identified below will be characterized. Assessment will include an evaluation of contaminant concentrations and an estimation of the quantity or extent of each type of waste material or segregated source, as applicable, or as specified below.

- Any remaining USTs and associated piping located on the Property, which may require a geophysical survey to identify.
- Any remaining ASTs and associated piping located on the Property. If the secondary containment of any AST contains standing water, a sample of that water shall be collected and analyzed for TAL-Metals (with speciation to analyze for hexavalent chromium), TCL-VOCs, and TCL-SVOCs.
- Any oil or chemical containing vessels located on the Property, including but not limited to drums, buckets, totes, and intermediate bulk containers.
- Any waste material from the steelmaking process, including but not limited to baghouse dust, located on the Property.
- Any hydraulic systems and associated hydraulic oil reservoirs located on the Property.
- The on-site WWTP and any associated underground drains, piping, and trenches located throughout the Property.
- Sludge from the WWTP.
- Scrap material, debris, DRI pellets, slag, mill scale, and any other waste material that is found in piles throughout the Property. The volume of each pile shall be estimated, and a representative number of samples shall be collected for TCLP analysis.
- Any sumps, service pits, cellars, and other subgrade structures located throughout the Property. If water is present in any of these structures, a sample shall be collected and analyzed for TAL-Metals (with speciation to analyze for hexavalent chromium), TCL-VOCs, and TCL-SVOCs.
- Any septic tanks located on the Property, which may require a geophysical survey to identify.
- Building structures should be assessed for asbestos-containing materials.
- Any transformers, capacitors, and other electrical equipment shall be confirmed to not contain PCB oil.

Many of the waste materials/segregated sources identified above are being addressed during the ongoing decommissioning of the steel mill by the current owner. A report describing disposition of waste sources addressed during demolition will be prepared and issued under separate cover from this *Baseline Site Assessment Report*. Waste materials/segregated sources remaining after decommissioning is complete will be characterized and disposed, as necessary, in accordance with an additional work plan, which will be submitted to SCDES.

2.2 Well Survey

GEL conducted a windshield survey to identify public and private wells used for drinking water supply within a one-half-mile radius of the Property and wells used for irrigation or other non-drinking water use within a one-quarter-mile radius. Also, the EDR Radius Map™ Report included in the Phase I ESA Report dated April 25, 2025, and the South Carolina Department of Natural Resources (SCDNR) Coastal Plain Well Inventory were reviewed for evidence of area wells. **Figure 4** depicts the locations of wells identified in the DNR database and two suspected wells identified by the windshield survey.

2.3 Soil Quality Assessment

Soil borings were installed on the Property at the locations specified in the *Work Plan* at the locations shown in **Figures 5 and 6,** and analytical results are summarized in **Table 2**. The soil samples were designated with the identification numbers LS-SB-01 through LS-SB-48. Surface soil samples were collected from 0-2 feet below the land surface (bls), and subsurface soil samples were typically collected from a depth of 2-3 feet bls with some samples collected at 3-4 or 4-5 feet bls. Soil sample depths for each sample are summarized in Table 2. Soil from each boring was field screened for organic vapors at 1-foot intervals using a photoionization detector (PID). PID readings are shown on the soil boring logs included in **Appendix I.**

Soil samples were collected using a drill rig equipped with Direct Push Technology (DPT) or a stainless-steel hand auger. At each sampling location, the boring was advanced to approximately 1-foot bls to collect a surface soil sample from the upper one foot and a subsurface soil sample from approximately 2 to 3 ft bls. Surface samples were collected at 1-2 ft bls in areas where concrete was present at the surface and subsurface samples were collected at 3 to 4 ft bls or 4 to 5 feet bls in these areas. The soil was placed into clean stainless-steel bowls or resealable plastic bags for evaluation and sample collection. Lithologic descriptions of the soil samples were recorded on soil boring logs along with physical indications of constituents of potential concern (COPCs), such as odors or staining. The soil boring logs are included in **Appendix I**.

After the soil samples were logged, portions of the extracted soil were transferred to laboratory-clean sample containers. Laboratory-quality nitrile gloves were worn by sampling personnel throughout the sampling process and changed between each sample. Upon collection, the sample bottles were placed on ice in a cooler and transported to the analytical laboratory under proper chain-of-custody procedures. Downhole equipment, bowls, and any other non-disposable sampling equipment were cleaned in the field between soil boring locations following GEL standard operating procedures.

Subsurface soil VOC samples were collected from a discrete depth using a sampler that conforms to EPA Method 5035. The VOC aliquot was collected from an undisturbed section of soil at the base of the interval (e.g., VOC samples were collected at 3 ft bls for the 2 to 3 ft bls interval).

The analyses required by the VCC for every soil sample include EPA Target Compound List (TCL) SVOCs, hexavalent chromium, and Target Analyte List (TAL) metals. TCL VOCs were analyzed for subsurface samples only. The samples and duplicate from LS-SB-04 and samples from LS-SB-16, LS-SB-17, and LS-SB-25 were also analyzed for TCL PCBs, TCL Pesticides, and cyanide.

2.4 Groundwater Quality Assessment

To assess groundwater quality at the Property, GEL installed eleven temporary wells using a drill rig equipped with DPT, and seventeen permanent shallow monitoring wells using a hollow stem auger drill rig or sonic drilling capabilities at the locations shown in **Figures 7 and 8**. All monitoring wells were installed by South Carolina-certified well drillers per South Carolina R.61-71 Well Standards (SCDES, May 27, 2016). The temporary wells were designated as LS-TW-02, -03, -06 through -13, and -15. Permanent wells were designated as LS-MW-01, -04, -05, -14, -16 through -27, and LS-MW-28D. Well construction details are summarized in **Table 3** and analytical results are summarized in **Table 4**.

Temporary wells consisted of installing a 2 1/4-inch diameter boring with DPT to the total well depth, ranging from 12 to 13 ft bls, and inserting a 1-inch diameter well screen and riser into the borehole. A peristaltic pump and disposable tubing were used to sample the wells and field parameters including temperature, pH, conductivity, and turbidity were recorded on field data sheets at the time of sampling. Field data are included in Appendix II. Temporary wells were abandoned in accordance with R.61-71 after sampling was completed.

Permanent wells were installed with a drill rig equipped with hollow stem augers or sonic drilling capability and consisted of a 2-inch diameter, flush-threaded polyvinyl chloride (PVC) well casing and a 5 or 10-foot long 0.010-inch machine-slotted well screen set to bracket the water table. A filter pack of No. 2 washed quartz sand was placed around the screen from the total well depth

to a minimum of two feet above the screen. Approximately two feet of bentonite pellets were placed on top of the filter pack and hydrated to form a seal. The well was grouted with neat Portland cement to the land surface. The well was finished with a watertight lockable well cap on the 2-inch diameter riser pipe, a 2-foot by 2-foot concrete pad, and a lockable steel flush-mounted protective casing. Following installation, the monitoring wells were developed using a submersible pump until the groundwater was relatively sediment-free, and pH and specific conductivity readings stabilized, as practicable.

Groundwater samples were collected from newly installed permanent monitoring wells no sooner than the day following development. The newly installed and existing wells were sampled using a submersible or peristaltic pump. Before sample collection, at least three casing volumes were evacuated to ensure that groundwater samples were representative of the water quality in the aquifer immediately surrounding the new wells. Indicator parameters, including turbidity, specific conductance, pH, and temperature, were measured in the field and recorded following the evacuation of each casing volume. Wells were considered adequately evacuated, and groundwater samples were collected when turbidity had stabilized or was below 10 Nephelometric Turbidity Units, pH measurements remained constant within 0.1 standard units of each other, specific conductivity varied by no more than 10 percent, and the temperature remained within 5 percent for at least three consecutive readings, as practicable. The field measurements were recorded on a Groundwater Sampling Field Data Sheet for each well. The Monitoring Well Installation Logs, Monitoring Well Development Logs, and Groundwater Sample Field Data Sheets are included in **Appendix II.**

The groundwater monitoring well analyses required by the VCC included TCL VOCs, TCL SVOCs, and total and dissolved TAL metals and hexavalent chromium. Additional analyses required for the samples collected from LS-TW-02, LS-TW-04, LS-MW-18, and LS-MW-24 included TCL PCBs, TCL Pesticides, and cyanide. Wells LS-MW-17, LS-MW-19, LS-MW-20, LS-MW-24 and LS-MW-27 were also analyzed for PFAS. Additionally, a sample of the plant's municipal water supply was collected from a spigot near the bathrooms and wastewater area and analyzed for PFAS (sample LS-Facility Water in **Table 4**). The plant is supplied with water by the City of Georgetown. Groundwater samples were collected in laboratory clean sample containers that are pre-dosed with preservatives required for the analytical parameters specified in the work plan for each well and the quality control samples. Laboratory-quality nitrile gloves were worn by sampling personnel throughout the sampling process and changed, at a minimum, between each well. Upon collection, the sample bottles were placed on ice in a cooler and transported to the analytical laboratory under proper chain-of-custody procedures.

2.5 Surface Water, Sediment, and Pore Water Assessment

Six surface water and three sediment samples were collected at the locations shown in **Figures 9, and 10**, respectively. The surface water and sediment sample analyses required by the VCC included TCL VOCs, hexavalent chromium, TCL SVOCs, and TAL metals. Field filtered surface water samples were also analyzed for dissolved TAL metals and hexavalent chromium. Four pore water samples were collected at the locations shown in **Figure 11**. Pore water sample analyses included TCL VOCs, TCL SVOCs, PFAS, and total and dissolved TAL metals and hexavalent chromium.

2.6 Quality Assurance/Quality Control Procedures and Reviews

To supplement the laboratory QA/QC analyses prescribed by the EPA laboratory methods, three additional types of QC samples (field duplicates, equipment blanks, and trip blanks) were collected and submitted for laboratory analysis, as indicated in Table 1. Ten field duplicate samples and one equipment blank were collected for the soil sampling program, and four field duplicates samples and one equipment blank were collected for the groundwater program. Equipment blanks were collected from disposable or decontaminated non-disposable sampling equipment by pouring laboratory-purified VOC-free water over the cleaned reusable equipment and/or unused disposable equipment and collecting it in sample containers. The field QC samples were analyzed for the sets of analytical parameters listed in **Table 1**. Trip blanks were prepared by the laboratory and accompanied each cooler containing samples analyzed for TCL VOCs. Nineteen trip blanks were submitted over the course of the project.

2.7 Investigation-Derived Waste

Water and soil from the monitoring well installation, development, and sampling were containerized in labeled 55-gallon steel drums. The drums will be properly disposed of by a third-party contractor.

3.0 DISCUSSION OF RESULTS

Summaries of constituents detected in the assessment samples are provided in **Tables 2** and **4 through 7**. The tables include EPA and South Carolina values used for site "screening" purposes and as initial cleanup goals, if applicable, as outlined in the *Baseline Site Assessment Work Plan*. Screening criteria are not de facto cleanup standards and should not be viewed as such. The role of these levels in the screening process is to help identify areas, contaminants, and conditions that may require further attention at a particular site.

At sites where contaminant concentrations fall below applicable screening criteria, no further action or study is warranted under the Superfund program, so long as the exposure assumptions at a site match those considered by the screening criteria calculations. Chemical concentrations above screening criteria would not automatically designate a site as "dirty" or trigger a response action; however, exceeding a screening level suggests that further evaluation of the potential risks from site contaminants may be appropriate.

3.1 Soil Assessment Results

A total of 106 surface and subsurface soil samples, including 10 field duplicates, were collected from 48 locations throughout the Property. The analytical results for those constituents detected in one or more soil samples are presented in **Table 2** and sample locations are shown in **Figures 5 and 6**. The sample identifications used include a numerical suffix such as “-1.0” which indicates the bottom of the sampled 1 foot interval in feet bls. The analytical laboratory reports, presenting the sample certificates of analysis and chain-of-custody forms, are provided in **Appendix III**.

Detected constituent concentrations are compared to the Regional Screening Levels (RSLs) for residential and industrial soil and the maximum contaminant level (MCL)-based Protection of Groundwater Soil Screening Levels (SSLs) from the United States Environmental Protection Agency (EPA) November 2024 RSL Summary Tables (Total Hazard Quotient (THQ) = 0.1). RSLs are not regulatory standards, and as a result, deviation from either level is not an indication of compliance issues. Analytical results exceeding screening criteria are highlighted in color in **Table 2**. Although concentrations exceeding SSLs for the protection of groundwater are highlighted in **Table 2**, monitoring wells installed for this assessment provide a direct indication of groundwater impact. Therefore, the SSL exceedances are not discussed further and are not shown in **Figures 7 and 8.**

As shown in the table, metals including hexavalent chromium, aluminum, antimony, arsenic, barium, cadmium, cobalt, copper, iron, lead, manganese, mercury, nickel, selenium, thallium, vanadium and zinc were detected at concentrations exceeding applicable residential RSLs in one or more soil samples. Only arsenic, cadmium, iron, lead, manganese, thallium and vanadium were detected at concentrations exceeding RSLs for industrial soils. While other metal constituents were detected above method detection limits, none of the concentrations exceeded applicable RSLs. Screening level exceedances for metals are summarized below:

- Detected concentrations of hexavalent chromium exceed its residential RSL (0.95 milligrams per kilogram (mg/Kg)) in six soil samples. The exceeding concentrations range from 1.01 to 12.5 mg/kg.

- Detected concentrations of aluminum exceed its residential RSL (7,700,000 micrograms per kilogram (ug/Kg)) in 32 soil samples. The exceeding concentrations range from 8,020,000 to 78,000,000 ug/kg.
- Detected concentrations of antimony exceed its residential RSL (3,100 ug/Kg) in 21 soil samples. The exceeding concentrations range from 3,290 to 26,400 ug/kg.
- Detected concentrations of arsenic exceed its residential RSL (680 ug/Kg) in 86 soil samples. 59 of the samples also exceed the industrial RSL (3,000 ug/Kg). The exceeding concentrations range from 700 to 41,600 ug/kg.
- The detected concentration of barium exceeds its residential RSL (1,500,000 ug/Kg) in one soil sample. The exceeding concentration is 3,800,000 ug/kg.
- Detected concentrations of cadmium exceed its residential RSL (710 ug/Kg) in 36 soil samples. Six of the samples also exceed the industrial RSL (10,000 ug/Kg). The exceeding concentrations range from 737 to 45,100 ug/kg.
- The detected concentration of cobalt exceeds its residential RSL (2,300 ug/Kg) in 54 soil samples. The exceeding concentrations range from 2,340 to 65,500 ug/kg.
- The detected concentration of copper exceeds its residential RSL (310,000 ug/Kg) in 10 soil samples. The exceeding concentrations range from 359,000 to 1,120,000 ug/kg.
- Detected concentrations of iron exceed its residential RSL (5,500,000 ug/Kg) in 68 soil samples. Twenty-eight of the samples also exceed the industrial RSL (82,000,000 ug/Kg). The exceeding concentrations range from 5,630,000 to 662,000,000 ug/kg.
- Detected concentrations of lead exceed its residential RSL (200,000 ug/Kg) in 12 soil samples. Four of the samples also exceed the industrial RSL (800,000 ug/Kg). The exceeding concentrations range from 211,000 to 2,740,000 ug/kg.
- Detected concentrations of manganese exceed its residential RSL (180,000 ug/Kg) in 62 soil samples. Thirty-one of the samples also exceed the industrial RSL (2,600,000 ug/Kg). The exceeding concentrations range from 239,000 to 35,400,000 ug/kg.
- The detected concentration of mercury exceeds its residential RSL (710 ug/Kg) in 3 soil samples. The exceeding concentrations range from 834 to 1,960 ug/kg.
- The detected concentration of nickel exceeds its residential RSL (140,000 ug/Kg) in 7 soil samples. The exceeding concentrations range from 141,000 to 649,000 ug/kg.
- The detected concentration of selenium exceeds its residential RSL (39,000 ug/Kg) in one soil sample. The exceeding concentration is 50,700 ug/kg.

- Detected concentrations of thallium exceed its residential RSL (78 ug/Kg) and industrial RSL (1,200 ug/Kg) in 3 soil samples. The exceeding concentrations range from 1,740 to 3,670 ug/kg.
- Detected concentrations of vanadium exceed its residential RSL (39,000 ug/Kg) in 45 soil samples. Three of the samples also exceed the industrial RSL (580,000 ug/Kg). The exceeding concentrations range from 41,300 to 1,040,000 ug/kg.
- The detected concentrations of zinc exceed its residential RSL (2,300,000 ug/Kg) in 8 soil samples. The exceeding concentrations range from 2,410,000 to 21,400,000 ug/kg.

The metals detected at the Property have been reported in background samples from the South Carolina Coastal Plain as published in *Elements in South Carolina Inferred Background Soil and Stream Sediment Samples* (Canova, South Carolina Geology, 1999). However, for most metals the concentrations detected at the Property locally exceed the maximum concentrations detected in Coastal Plain background samples, indicating that site activities have caused metals impact in soil in some areas of the Site.

SVOCs detected in soil samples are shown on Table 2. The only SVOC concentrations that exceed applicable screening levels are polynuclear aromatic hydrocarbons (PAHs) including 2-methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and dibenzo(a,h)anthracene.

- Detected concentrations of 2-methylnaphthalene exceed its residential RSL (24,000 ug/Kg) in one soil sample. The exceeding concentration is 63,900 ug/kg.
- Detected concentrations of benzo(a)anthracene exceed its residential RSL (1,100 ug/Kg) in one soil sample. The exceeding concentration is 2,040 ug/kg.
- Detected concentrations of benzo(a)pyrene exceed its residential RSL (110 ug/Kg) in 17 soil samples. The exceeding concentrations range from 132 to 1,390 ug/kg.
- Detected concentrations of benzo(b)fluoranthene exceed its residential RSL (1,100 ug/Kg) in 3 soil samples. The exceeding concentrations range from 1,200 to 2,190 ug/kg.
- Detected concentrations of dibenzo(a,h)anthracene exceed its residential RSL (110 ug/Kg) in 3 soil samples. The exceeding concentrations range from 144 to 218 ug/kg.

VOCs detected in the 53 subsurface soil samples (including 5 field duplicates) analyzed for VOCs are shown on Table 2. Methylcyclohexane was the only VOC to exceed applicable screening levels. It was detected in one sample at 86,900 ug/Kg exceeding its residential RSL (9,800 ug/Kg) and industrial RSL (41,000 ug/Kg).

Pesticides, PCBS, and cyanide were analyzed in 11 soil samples (including 1 field duplicate). Low concentrations of several of these constituents were detected in one or more soil samples. The PCBs aroclor 1242 and aroclor 1254 were detected in one soil sample at 334 ug/Kg and 122 ug/Kg, respectively, exceeding their respective residential RSLs of 230 ug/Kg and 120 ug/Kg. None of the detected concentrations for the other parameters exceed residential or industrial screening levels.

3.2 Groundwater Flow Determination

The water table elevation calculated from the static depths to water and surveyed tops of casing measured for each of the temporary and permanent monitoring wells are listed in **Table 3**. These elevations are also presented in **Figure 12**, along with inferred water table elevation contour lines and groundwater flow directions. Based on the potentiometric surface map, groundwater generally flows to the east and southeast toward the Sampit River.

3.3 Groundwater Assessment Results

A total of 42 groundwater samples, including 4 field duplicates, were collected from 28 newly installed temporary and permanent monitoring wells and 10 permanent wells installed for previous assessments. The well locations are shown in **Figures 7 and 8**. The analytical results for those constituents detected in groundwater samples are presented in **Table 4**. The analytical laboratory reports, presenting the sample certificates of analysis and chain-of-custody forms, are provided in **Appendix IV**. Groundwater quality results are compared to the primary MCLs in the South Carolina Primary Drinking Water Regulations, R.61-58, or, if not specified in R.61-58, to the most current EPA RSLs for tapwater, which are not regulatory standards for groundwater.

As shown in **Table 4**, total metals results and dissolved metals results, conducted on field filtered groundwater samples, are reported to evaluate the effects of sample turbidity on the metals concentrations. As shown in the table, metals including hexavalent chromium, aluminum, antimony, arsenic, chromium, cobalt, iron, lead, manganese, nickel, selenium, silver, vanadium and zinc were detected at concentrations exceeding applicable MCLs or tapwater RSLs in one or more filtered or unfiltered groundwater samples.

Screening level exceedances for metals are summarized below:

- Detected concentrations of total and dissolved hexavalent chromium exceed its tapwater RSL (0.00011 milligrams per liter (mg/L)) in 15 groundwater samples and 12 groundwater samples, respectively. The exceeding concentrations range from 0.003 to 0.0889 mg/L.

- Detected concentrations of total and dissolved aluminum exceed its tapwater RSL (2,000 micrograms per liter (ug/L)) in 12 groundwater samples and 4 groundwater samples, respectively. The exceeding concentrations range from 2,640 to 250,000 ug/L. The results suggest that aluminum is largely the result of sample turbidity.
- Detected concentrations of total and dissolved antimony exceed its MCL (10 ug/L) in 7 groundwater samples and 4 groundwater samples, respectively. The exceeding concentrations range from 8.01 to 21.5 ug/L. The results suggest that antimony concentrations are not the result of sample turbidity.
- Detected concentrations of total and dissolved arsenic exceed its MCL (10 ug/L) in 7 groundwater samples and 4 groundwater samples, respectively. The exceeding concentrations range from 11.3 to 61.5 ug/L. The results suggest that arsenic concentrations may be related in part to sample turbidity.
- Detected concentrations of total chromium exceed its MCL (100 ug/L) in one unfiltered groundwater sample. The exceeding concentration is 165 ug/L. The results suggest that the chromium concentration may be related to sample turbidity.
- Detected concentrations of total and dissolved cobalt exceed its tapwater RSL (0.6 ug/L) in 9 groundwater samples and 5 groundwater samples, respectively. The exceeding concentrations range from 1.14 to 20.5 ug/L. The results suggest that the higher cobalt concentration may be related to sample turbidity.
- Detected concentrations of total and dissolved iron exceed its tapwater RSL (1,400 ug/L) in 31 groundwater samples and 27 groundwater samples, respectively. The exceeding concentrations range from 2,160 to 820,000 ug/L. The results suggest that the iron concentrations are not related to sample turbidity.
- Detected concentrations of total and dissolved lead exceed its MCL (10 ug/L) in 10 groundwater samples and 1 groundwater sample, respectively. The exceeding concentrations range from 10.1 to 274 ug/L. The results suggest that the higher lead concentrations are related to sample turbidity.
- Detected concentrations of total and dissolved manganese exceed its tapwater RSL (43 ug/L) in 32 groundwater samples and 28 groundwater samples, respectively. The exceeding concentrations range from 56.8 to 41,600 ug/L. The results suggest that the higher manganese concentrations are not related to sample turbidity.
- Detected concentrations of total nickel exceed its tapwater RSL (39 ug/L) in 2 unfiltered groundwater samples. The exceeding concentrations range from 39.1 to 64.1 ug/L. The results suggest that the higher nickel concentrations are related to sample turbidity.

- Detected concentrations of total and dissolved selenium exceed its MCL (50 ug/L) in 3 groundwater samples and 3 groundwater samples, respectively. The exceeding concentrations range from 76.8 to 200 ug/L. The results suggest that the higher selenium concentrations are not related to sample turbidity.
- Detected concentrations of dissolved silver exceed its tapwater RSL (9.4 ug/L) in one filtered groundwater sample. The exceeding concentration is 9.61 ug/L. The results suggest that the higher selenium concentrations are not related to sample turbidity.
- Detected concentrations of total and dissolved vanadium exceed its tapwater RSL (8.6 ug/L) in 17 groundwater samples and 8 groundwater samples, respectively. The exceeding concentrations range from 9.91 to 551 ug/L. The results suggest that the higher vanadium concentrations are not related to sample turbidity.
- Detected concentrations of total zinc exceed its tapwater RSL (600 ug/L) in two unfiltered groundwater samples. The exceeding concentrations range from 627 to 2,200 ug/L. The results suggest that the higher zinc concentrations may be related to sample turbidity.

SVOCs detected in groundwater samples are shown on Table 4. The only SVOC concentrations that exceed applicable screening levels are PAHs including 2-methylnaphthalene, benzo(a)anthracene, bis(2-ethylhexyl)phthalate and naphthalene. SVOC screening level exceedances are summarized below:

- Detected concentrations of 2-methylnaphthalene exceed its tapwater RSL (3.6 ug/L) in two groundwater samples. The exceeding concentrations range from 18.9 to 53.4 ug/L.
- Detected concentrations of benzo(a)anthracene exceed its tapwater RSL (0.03 ug/L) in two groundwater samples. The exceeding concentrations range from 0.45 to 1.6 ug/L.
- Detected concentrations of bis(2-ethylhexyl)phthalate exceed its MCL (6 ug/L) in two groundwater samples. The exceeding concentrations range from 7.83 to 314 ug/L.
- Detected concentrations of naphthalene exceed its tapwater RSL (0.12 ug/L) in three groundwater samples. The exceeding concentrations range from 2.22 to 18.2 ug/L.

VOCs detected in the groundwater samples are shown on Table 4. The only VOCs detected were chlorinated compounds including 1,1-dichloroethane (1,1-DCA), 1,1-dichloroethylene (1,1-DCE), 1,2-dichlorethane (1,2-DCA), cis-1,2-dichloroethylene (cis-1,2-DCE), methylene chloride (MC), tetrachloroethylene (PCE), trichloroethylene (TCE) and vinyl chloride (VC). VOC screening level exceedances are summarized below:

- The detected concentration of 1,1-DCA exceeds its tapwater RSL (2.8 ug/L) in one groundwater sample. The exceeding concentration is 21.6 ug/L.
- The detected concentration of 1,1-DCE exceeds its MCL (7 ug/L) in one groundwater sample. The exceeding concentration is 39.4 ug/L.
- The detected concentration of 1,2-DCA exceeds its MCL (5 ug/L) in one groundwater sample. The exceeding concentration is 20.5 ug/L.
- Detected concentrations of cis-1,2-DCE exceed its MCL (70 ug/L) in two groundwater samples. The exceeding concentrations range from 12,100 to 27,600 ug/L.
- The detected concentration of MC exceeds its MCL (5 ug/L) in one groundwater sample. The exceeding concentration is 230 ug/L.
- Detected concentrations of PCE exceed its MCL (5 ug/L) in two groundwater samples. The exceeding concentrations range from 80.6 to 1,180 ug/L.
- Detected concentrations of TCE exceed its MCL (5 ug/L) in two groundwater samples. The exceeding concentrations range from 245 to 1,530 ug/L.
- The detected concentration of VC exceeds its MCL (2 ug/L) in one groundwater sample. The exceeding concentration is 1,930 ug/L.

Several PFAS compounds were detected in the five groundwater samples and one field duplicate collected at the Site. 2,3,3,3-Tetrafluoro-2-(1,1,2,2,3,3,3-heptafluoropropoxy)-propanoic acid (PFPrOPrA), perfluorodecanoic acid (PFDA), perfluorohexane sulfonic acid (PFHxS), perfluorooctane sulfonic acid (PFOS), and perfluorooctanoic acid (PFOA) were detected at concentrations exceeding tapwater RSLs or MCLs in one or more of the groundwater samples. Additionally, PFOS and PFOA were detected at concentrations exceeding screening levels in a sample from the plant water supply. PFAS screening level exceedances are summarized below:

- The detected concentration of PFPrOPrA exceeds its MCL (10 nanograms per liter (ng/L)) in one groundwater sample. The exceeding concentration is 17.9 ng/L.
- The detected concentrations of PFDA exceed its tapwater RSL (0.004 ng/L) in two groundwater samples. The exceeding concentrations range from 3.04 to 6.25 ng/L.
- The detected concentrations of PFHxS exceed its MCL (10 ng/L) in four groundwater samples. The exceeding concentrations range from 16.2 to 33.2 ng/L.
- The detected concentrations of PFOS exceed its MCL (4 ng/L) in six groundwater samples. The exceeding concentrations range from 34.3 to 136 ng/L. PFOS was also detected in the plant water supply at 8.08 ng/L also exceeding the MCL.

- The detected concentrations of PFOA exceed its MCL (4 ng/L) in six groundwater samples. The exceeding concentrations range from 12.7 to 62.1 ng/L. PFOA was also detected in the plant water supply at 5.25 ng/L also exceeding the MCL.

Pesticides, PCBS, and cyanide were analyzed in 5 groundwater samples (including 1 field duplicate). None of these parameters were detected in the groundwater samples.

3.4 Surface Water, Sediment, and Pore Water Assessment Results

Surface water and pore water samples were analyzed for TCL VOCs, TCL SVOCs, and total and dissolved TAL metals and hexavalent chromium. Pore water samples were also analyzed for PFAS. Sediment samples were analyzed for TCL VOCs, TCL SVOCs, TAL metals, and hexavalent chromium. The analytical results for those constituents detected in one or more surface water, sediment, and pore water samples are presented in **Tables 5, 6, and 6**, respectively. The analytical laboratory reports, presenting the sample certificates of analysis and chain-of-custody forms, are provided in **Appendices III and IV**.

Detected surface water constituent concentrations are compared to the South Carolina Water Classification and Standards R. 61-68 (June 27, 2014) based on the consumption of either "water and organism" or "organism only" as applicable for the water body, if listed, and to the groundwater MCLs. As shown in **Table 5**, total antimony (LS-SW-02, LS-SW-03, LS-SW-04) and total lead (LS-SW-01, LS-SW-04, LS-SW-05) in the surface water samples exceed their respective MCLs or water and organism screening level. Dissolved antimony and lead in field filtered samples did not exceed screening levels indicating that the total results were partially the result of sample turbidity and not reflective of surface water quality. Total and dissolved mercury in samples LS-SW-02, LS-SW-03, and LS-SW-04 exceeded the “water and organism” and “organism only” screening levels. Vinyl chloride slightly exceeded the MCL in sample LS-SW-04.

Detected constituent concentrations in sediment samples are compared to EPA Region 4 Ecological Screening Values (ESVs) for marine sediment at hazardous waste sites (*Supplemental Guidance to ERAGS: Region 4, Ecological Risk Assessment*; March 2018), if listed. ESVs are not regulatory standards, so failure to meet ESVs is not a compliance issue. As shown in **Table 6**, antimony, arsenic, cadmium, chromium, copper, lead, mercury, nickel, and zinc were detected at concentrations exceeding their respective ESVs in sediment sample LS-SD-01 and its field duplicate. Chromium, copper, and zinc also exceed ESVs in samples LS-SD-02 and LS-SD-03, and nickel also exceeds its ESV in LS-SD-02. The SVOCs, benzo(a)anthracene, benzo(a)pyrene, bis(2-ethylhexyl)phthalate, chrysene, fluoranthene, phenanthrene, and pyrene exceed their respective ESVs in sediment sample LS-SD-01 and its field duplicate.

Detected pore water constituent concentrations are compared to the EPA MCLs and tapwater RSLs for constituents without established MCLs and to the South Carolina Water Classification and Standards R. 61-68 (June 27, 2014) based on the consumption of either "water and organism" or "organism only" as applicable for the water body. As shown in **Table 7**, hexavalent chromium, aluminum, antimony, arsenic, cadmium, chromium, cobalt, iron, lead, manganese, mercury, vanadium, and zinc were detected in one or more filtered and/or unfiltered porewater samples, at concentrations exceeding tapwater RSLs, MCLs or surface water screening levels. The majority of the exceedances were in unfiltered samples suggesting that the metals results were largely the result of sample turbidity. Concentrations in filtered samples (dissolved metals) exceeded screening levels for hexavalent chromium, aluminum, antimony, arsenic, beryllium, cobalt, iron, manganese, and vanadium in one or more samples.

The PAHs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were detected at concentrations exceeding applicable tapwater RSLs, MCLs, or surface water screening levels in one sample (LS-PW-04).

The only VOC detected was methylene chloride which did not exceed screening levels. Methylene chloride was detected in all five pore water samples and was also detected in the laboratory method blank, indicating that the detections resulted from laboratory interferences.

Several PFAS compounds were detected in the four pore water samples and one field duplicate collected at the Site. PFDA, PFHxS, PFOS, and PFOA were detected at concentrations exceeding tapwater RSLs or MCLs in one or more of the porewater samples.

PFAS screening level exceedances in pore water are summarized below:

- The detected concentrations of PFDA exceed its tapwater RSL (0.004 ng/L) in two porewater samples. The exceeding concentrations range from 2.92 to 12.4 ng/L.
- The detected concentrations of PFHxS exceed its MCL (10 ng/L) in two porewater samples. The exceeding concentrations range from 12.2 to 13.8 ng/L.
- The detected concentrations of PFOS exceed its MCL (4 ng/L) in all five porewater samples. The exceeding concentrations range from 12.2 to 42.2 ng/L.
- The detected concentrations of PFOA exceed its MCL (4 ng/L) in four porewater samples. The exceeding concentrations range from 4.02 to 29.2 ng/L.

3.5 QA/QC Analysis Results

Table 1 details the QA/QC samples collected as part of the assessment, including equipment blanks, trip blanks, and field duplicates. The analytical results were subjected to Level II data validation, which comprises an evaluation of the laboratory's quality control measures. The data validation was performed in accordance with the United States Environmental Protection Agency (USEPA) National Function Guidelines (NFG) for Organic and Inorganic Superfund Methods Data Review (November 2020). The Data Validation Report in Appendix V compiles the data validation reports for each laboratory report. Additional details and applicable additional qualifiers are contained in the data validation report, and the data qualifiers are also included in the summary tables for each sample medium.

Overall the laboratory data is considered acceptable for use in this assessment. Data validation identified non-detected results for several SVOCs in some soil and sediment sample batches that were rejected due to laboratory control sample or matrix spike results being outside acceptance limits. These SVOCs were not detected or were rarely detected in any of the other soil samples, and the rejection of these results does not adversely affect the evaluation of the data. Additionally, results for some analytes were considered estimated based on laboratory control sample, matrix spike, or matrix spike duplicate recoveries being below specified acceptance ranges in some sample batches. The majority of field duplicate results were acceptable with minor failures for specific analytes in some samples which are considered estimated. Additional details are contained in the data validation report included in Appendix V, and applicable additional qualifiers are shown on the laboratory certificates of analysis included in Appendix V, and shown on the summary tables.

4.0 SUMMARY OF RESULTS

The following sections present discussions and summaries of the analytical results for soil, groundwater, sediment, surface water and porewater at the Property.

Soil

- Metals including hexavalent chromium, aluminum, antimony, arsenic, barium, cadmium, cobalt, copper, iron, lead, manganese, mercury, nickel, selenium, thallium, vanadium and zinc were detected at concentrations exceeding applicable residential RSLs in one or more soil samples throughout the Property. Only arsenic, cadmium, iron, lead, manganese, thallium and vanadium were detected at concentrations exceeding RSLs for industrial soils.
- Although background concentrations of the detected metals have been identified in the South Carolina Coastal Plain soil, the metal concentrations in soil are present at

concentrations exceeding the upper range of background metal concentrations, suggesting that soils have been impacted by site activities.

- Several SVOCs were detected at concentrations exceeding residential RSLs across the Property; however, none of the concentrations exceed industrial RSLs
- One VOC, methylcyclohexane, was detected at a concentration exceeding its residential and industrial RSLs. The sample (LS-SB-27-4.0) was collected near the former Riverside Oil Company building.
- The PCBs aroclor 1242 and aroclor 1254 were detected at concentrations exceeding their respective residential soil RSLs in one sample (LS-SB-25-3.0) from near the WWTP.
- Cyanide and pesticides did not exceed screening levels in any of the soil samples

Groundwater

- Groundwater generally flows to the east and southeast toward the Sampit River.
- Metals including hexavalent chromium, aluminum, antimony, arsenic, chromium, cobalt, iron, lead, manganese, nickel, selenium, vanadium and zinc were detected at concentrations exceeding applicable MCLs or tapwater RSLs in one or more unfiltered groundwater samples.
- Dissolved hexavalent chromium, aluminum, antimony, arsenic, cobalt, iron, lead, manganese, selenium, silver, and vanadium were detected at concentrations exceeding applicable MCLs or tapwater RSLs in one or more filtered groundwater samples, indicating that metals results are not strictly related to sample turbidity.
- The SVOCs 2-methylnaphthalene, benzo(a)anthracene, bis(2-Ethylhexyl)phthalate, and naphthalene were detected in two or more groundwater samples at concentrations exceeding MCLs or tapwater RSLs. The wells with exceedances were in wells including LS-TW-10 near the fuel oil ASTs and existing wells MW-23 and CA-3 near the coil compactor area in the vicinity of the hydraulic oil release.
- The only VOCs detected in groundwater were chlorinated compounds including 1,1-DCA, 1,1-DCE, 1,2-DCA, cis-1,2-DCE, MC, PCE, TCE, and VC. Concentrations exceed MCLs or tapwater RSLs only in existing wells MW-23 and CA-3 near the coil compactor area. No VOCs were detected in the deep well (LS-MW-28D) installed for this assessment located near existing well MW-23. Based on the ratio of the detected concentrations of PCE and TCE to their degradation daughter products it appears the chlorinated solvent plume is naturally attenuating. Additionally, the plume appears to be stable and localized given that chlorinated solvents are not detected in downgradient wells LS-MW-01, LS-MW-04, LS-MW-14, and LS-MW-27.

- PFAS compounds, PFPrOPrA, PFDA, PFHxS, PFOS, and PFOA, exceed their respective tapwater RSLs or MCLs in one or more groundwater samples from wells LW-MW-17, LS-MW-19, LS-MW-20, LS-MW-24, and LS-MW-27. PFOS and PFOA were also detected in the plant water supply at levels exceeding MCLs. The detected concentrations of PFAS compounds across the entire site do not appear to be indicative of a localized source area as it is unlikely that PFAS compounds would have been used across the entire Liberty Steel facility. Additional groundwater investigation would be required to evaluate the source of PFAS at the site, if any.

Surface Water

- Total antimony (LS-SW-02, LS-SW-03, LS-SW-04) and total lead (LS-SW-01, LS-SW-04, LS-SW-05) in the surface water samples exceed their respective MCLs or water and organism screening level. Dissolved antimony and lead in field filtered samples did not exceed screening levels indicating that the total results were partially the result of sample turbidity and not reflective of surface water quality.
- Total and dissolved mercury in samples LS-SW-02, LS-SW-03, and LS-SW-04 exceeded the "water and organism" and "organism only" screening levels.
- VC slightly exceeded the MCL in sample LS-SW-04 which is located downgradient of the coil compactor area/chlorinated solvent release area. The LS-SW-04 sample was taken directly from a stormwater discharge pipe that has a continuous flow during dry weather. It appears that the stormwater discharge pipe is receiving a nominal amount of groundwater intrusion into the pipe. All of the stormwater infrastructure at the Liberty Steel site will be removed, rerouted, and replaced as a part of the site redevelopment activities which would eliminate this discharge.

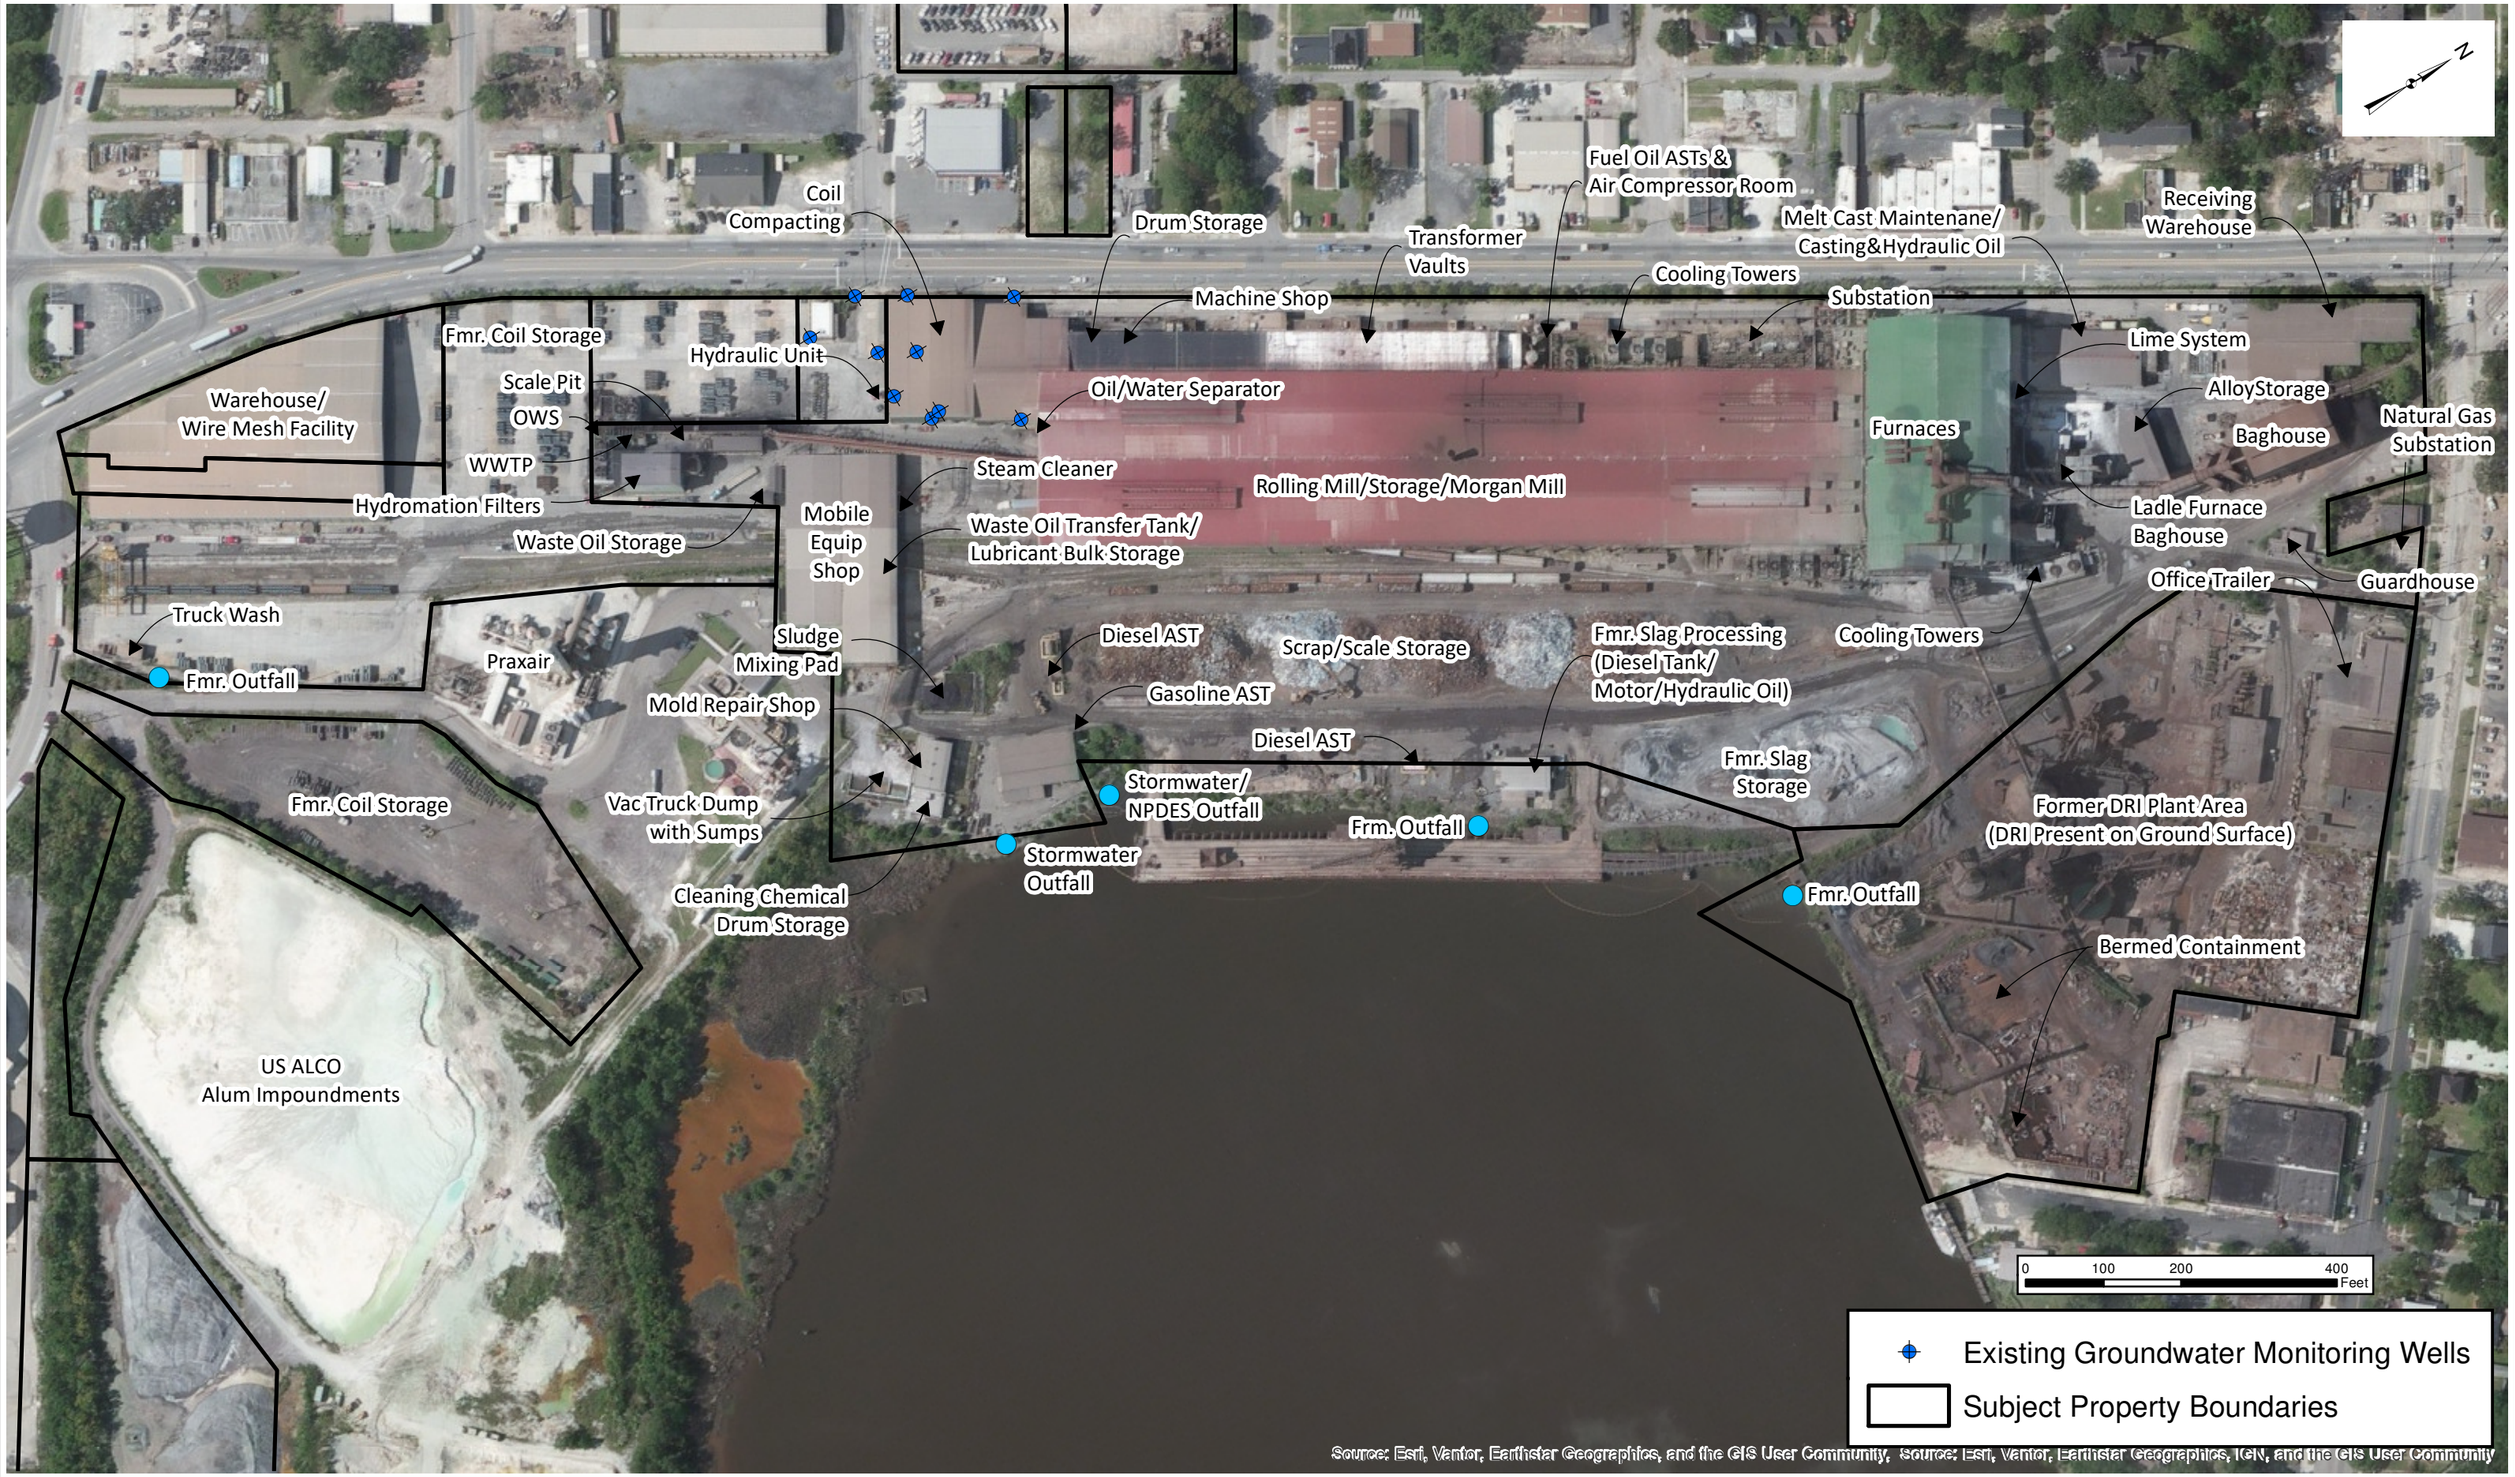
Sediment

- Antimony, arsenic, cadmium, chromium, copper, lead, mercury, nickel, and zinc were detected at concentrations exceeding their respective ESVs in sediment sample LS-SD-01 and its field duplicate. Chromium, copper, and zinc also exceed ESVs in samples LS-SD-02 and LS-SD-03, and nickel also exceeds its ESV in LS-SD-02.
- The SVOCs, benzo(a)anthracene, benzo(a)pyrene, bis(2-ethylhexyl)phthalate, chrysene, fluoranthene, phenanthrene, and pyrene exceed their respective ESVs in sediment sample LS-SD-01 and its field duplicate.

Pore Water

- Hexavalent chromium, aluminum, antimony, arsenic, cadmium, chromium, cobalt, iron, lead, manganese, mercury, vanadium, and zinc were detected in one or more filtered and/or unfiltered pore water samples, at concentrations exceeding tapwater RSLs, MCLs or surface water screening levels. The majority of the exceedances were in unfiltered samples suggesting that the metals results were largely the result of sample turbidity.
- Concentrations in filtered samples (dissolved metals) exceeded screening levels for hexavalent chromium, antimony, arsenic, cobalt, iron, manganese, and vanadium in one or more pore water samples.
- The PAHs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were detected at concentrations exceeding applicable tapwater RSLs, MCLs, or surface water screening levels in one sample (LS-PW-04).
- VOCs were not detected at concentrations exceeding screening levels in pore water.
- Several PFAS compounds were detected in the four pore water samples and one field duplicate collected at the Site. PFDA, PFHxS, PFOS, and PFOA were detected at concentrations exceeding tapwater RSLs or MCLs in one or more of the porewater samples.
- Due to the tidal influence of the Sampit River it is unlikely that the porewater samples represent pure groundwater entering the Sampit River. Additional investigation would be necessary to evaluate if the detected concentrations in groundwater are migrating to the Sampit River.

5.0 RECOMMENDATIONS



The data from this investigation indicate that constituents of potential concern including metals, SVOCs, VOCs and PFAS compounds are present at the Property in soil, groundwater, sediment, surface water and pore water at concentrations exceeding applicable screening levels. It is recommended that a Media Management Plan be prepared for SCDES approval to limit the exposure to impacted media which may be encountered during proposed redevelopment activities.

Additionally, the current owner, Liberty Steel is removing all structures on the Property down to the concrete slabs. During site redevelopment activities by Liberty, the remaining concrete slabs will be removed. At that time, GEL will prepare a subslab soil assessment work plan for SCDES review and approval.

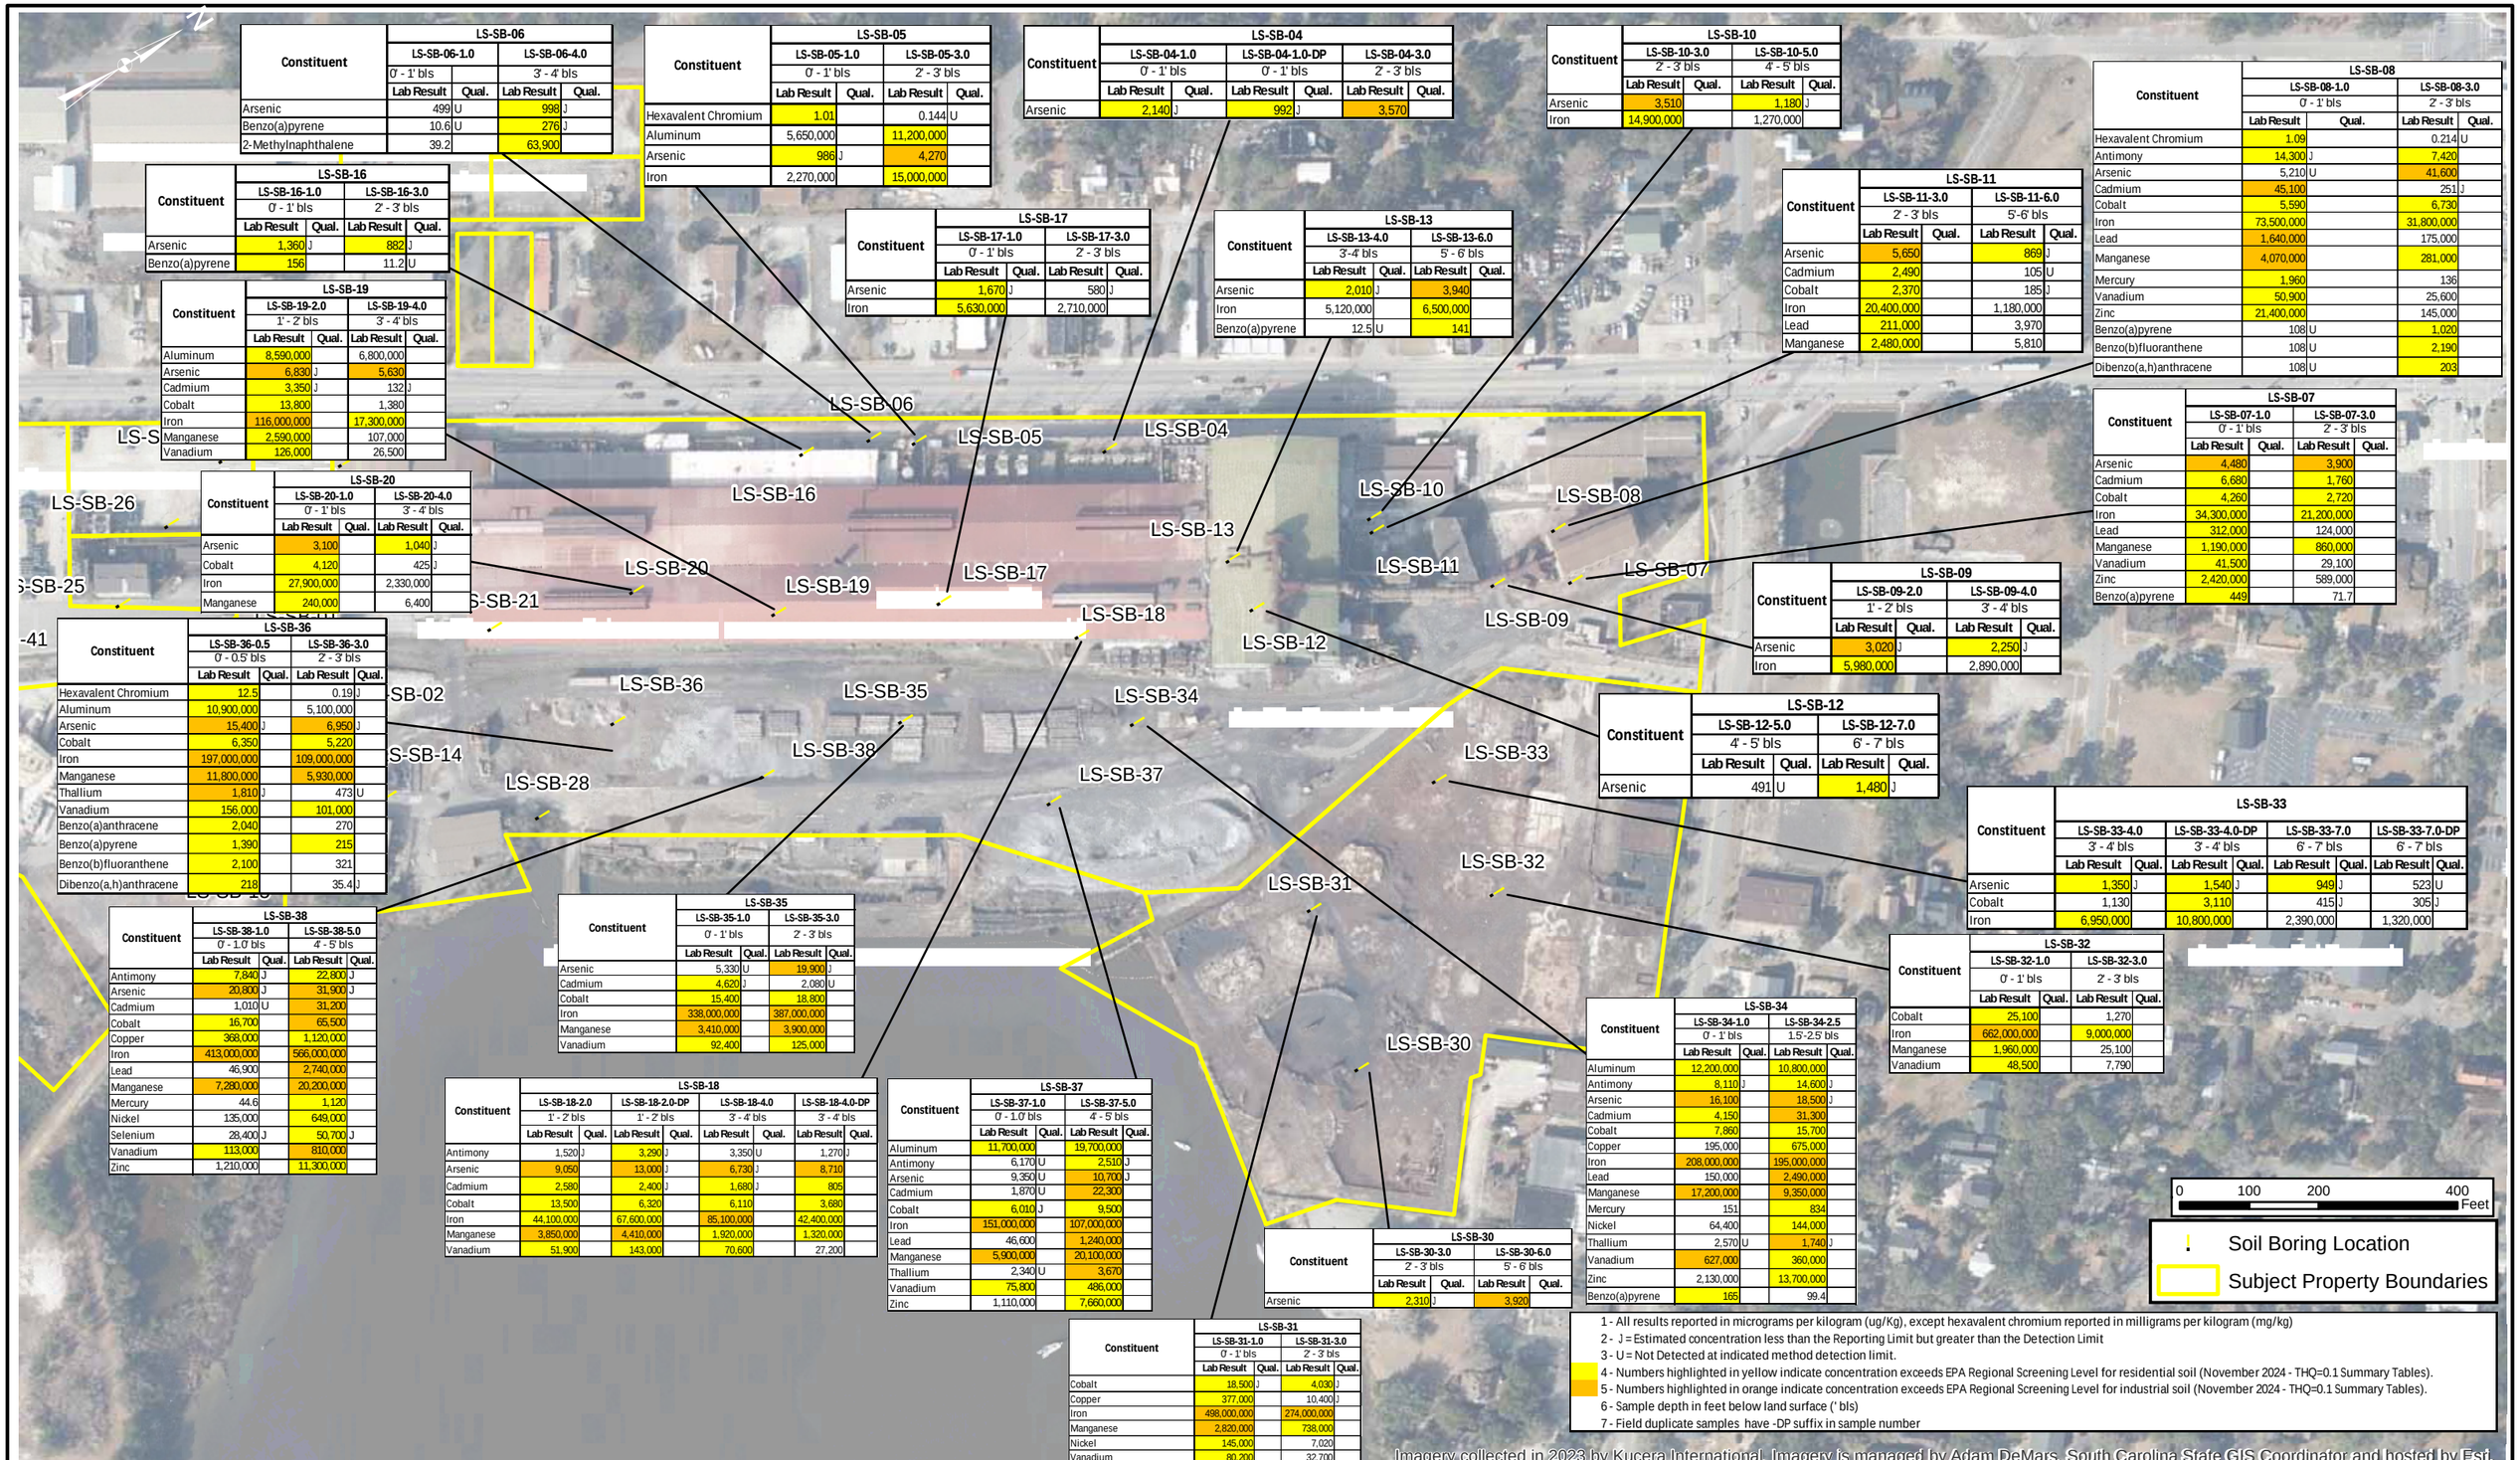
1 - All results reported in micrograms per kilogram (ug/Kg), except hexavalent chromium reported in milligrams per kilogram (mg/kg)
2 - J = Estimated concentration less than the Reporting Limit but greater than the Detection Limit
3 - U = Not Detected at indicated method detection limit.
4 - Numbers highlighted in yellow indicate concentration exceeds EPA Regional Screening Level for residential soil (November 2024 - THQ=0.1 Summary Tables).
5 - Numbers highlighted in orange indicate concentration exceeds EPA Regional Screening Level for industrial soil (November 2024 - THQ=0.1 Summary Tables).
6 - Sample depth in feet below land surface (' bls)
7 - Field duplicate samples have -DP suffix in sample number



Imagery collected in 2023 by Kucera International. Imagery is managed by Adam DeMars, South Carolina State GIS Coordinator and hosted by Esri.

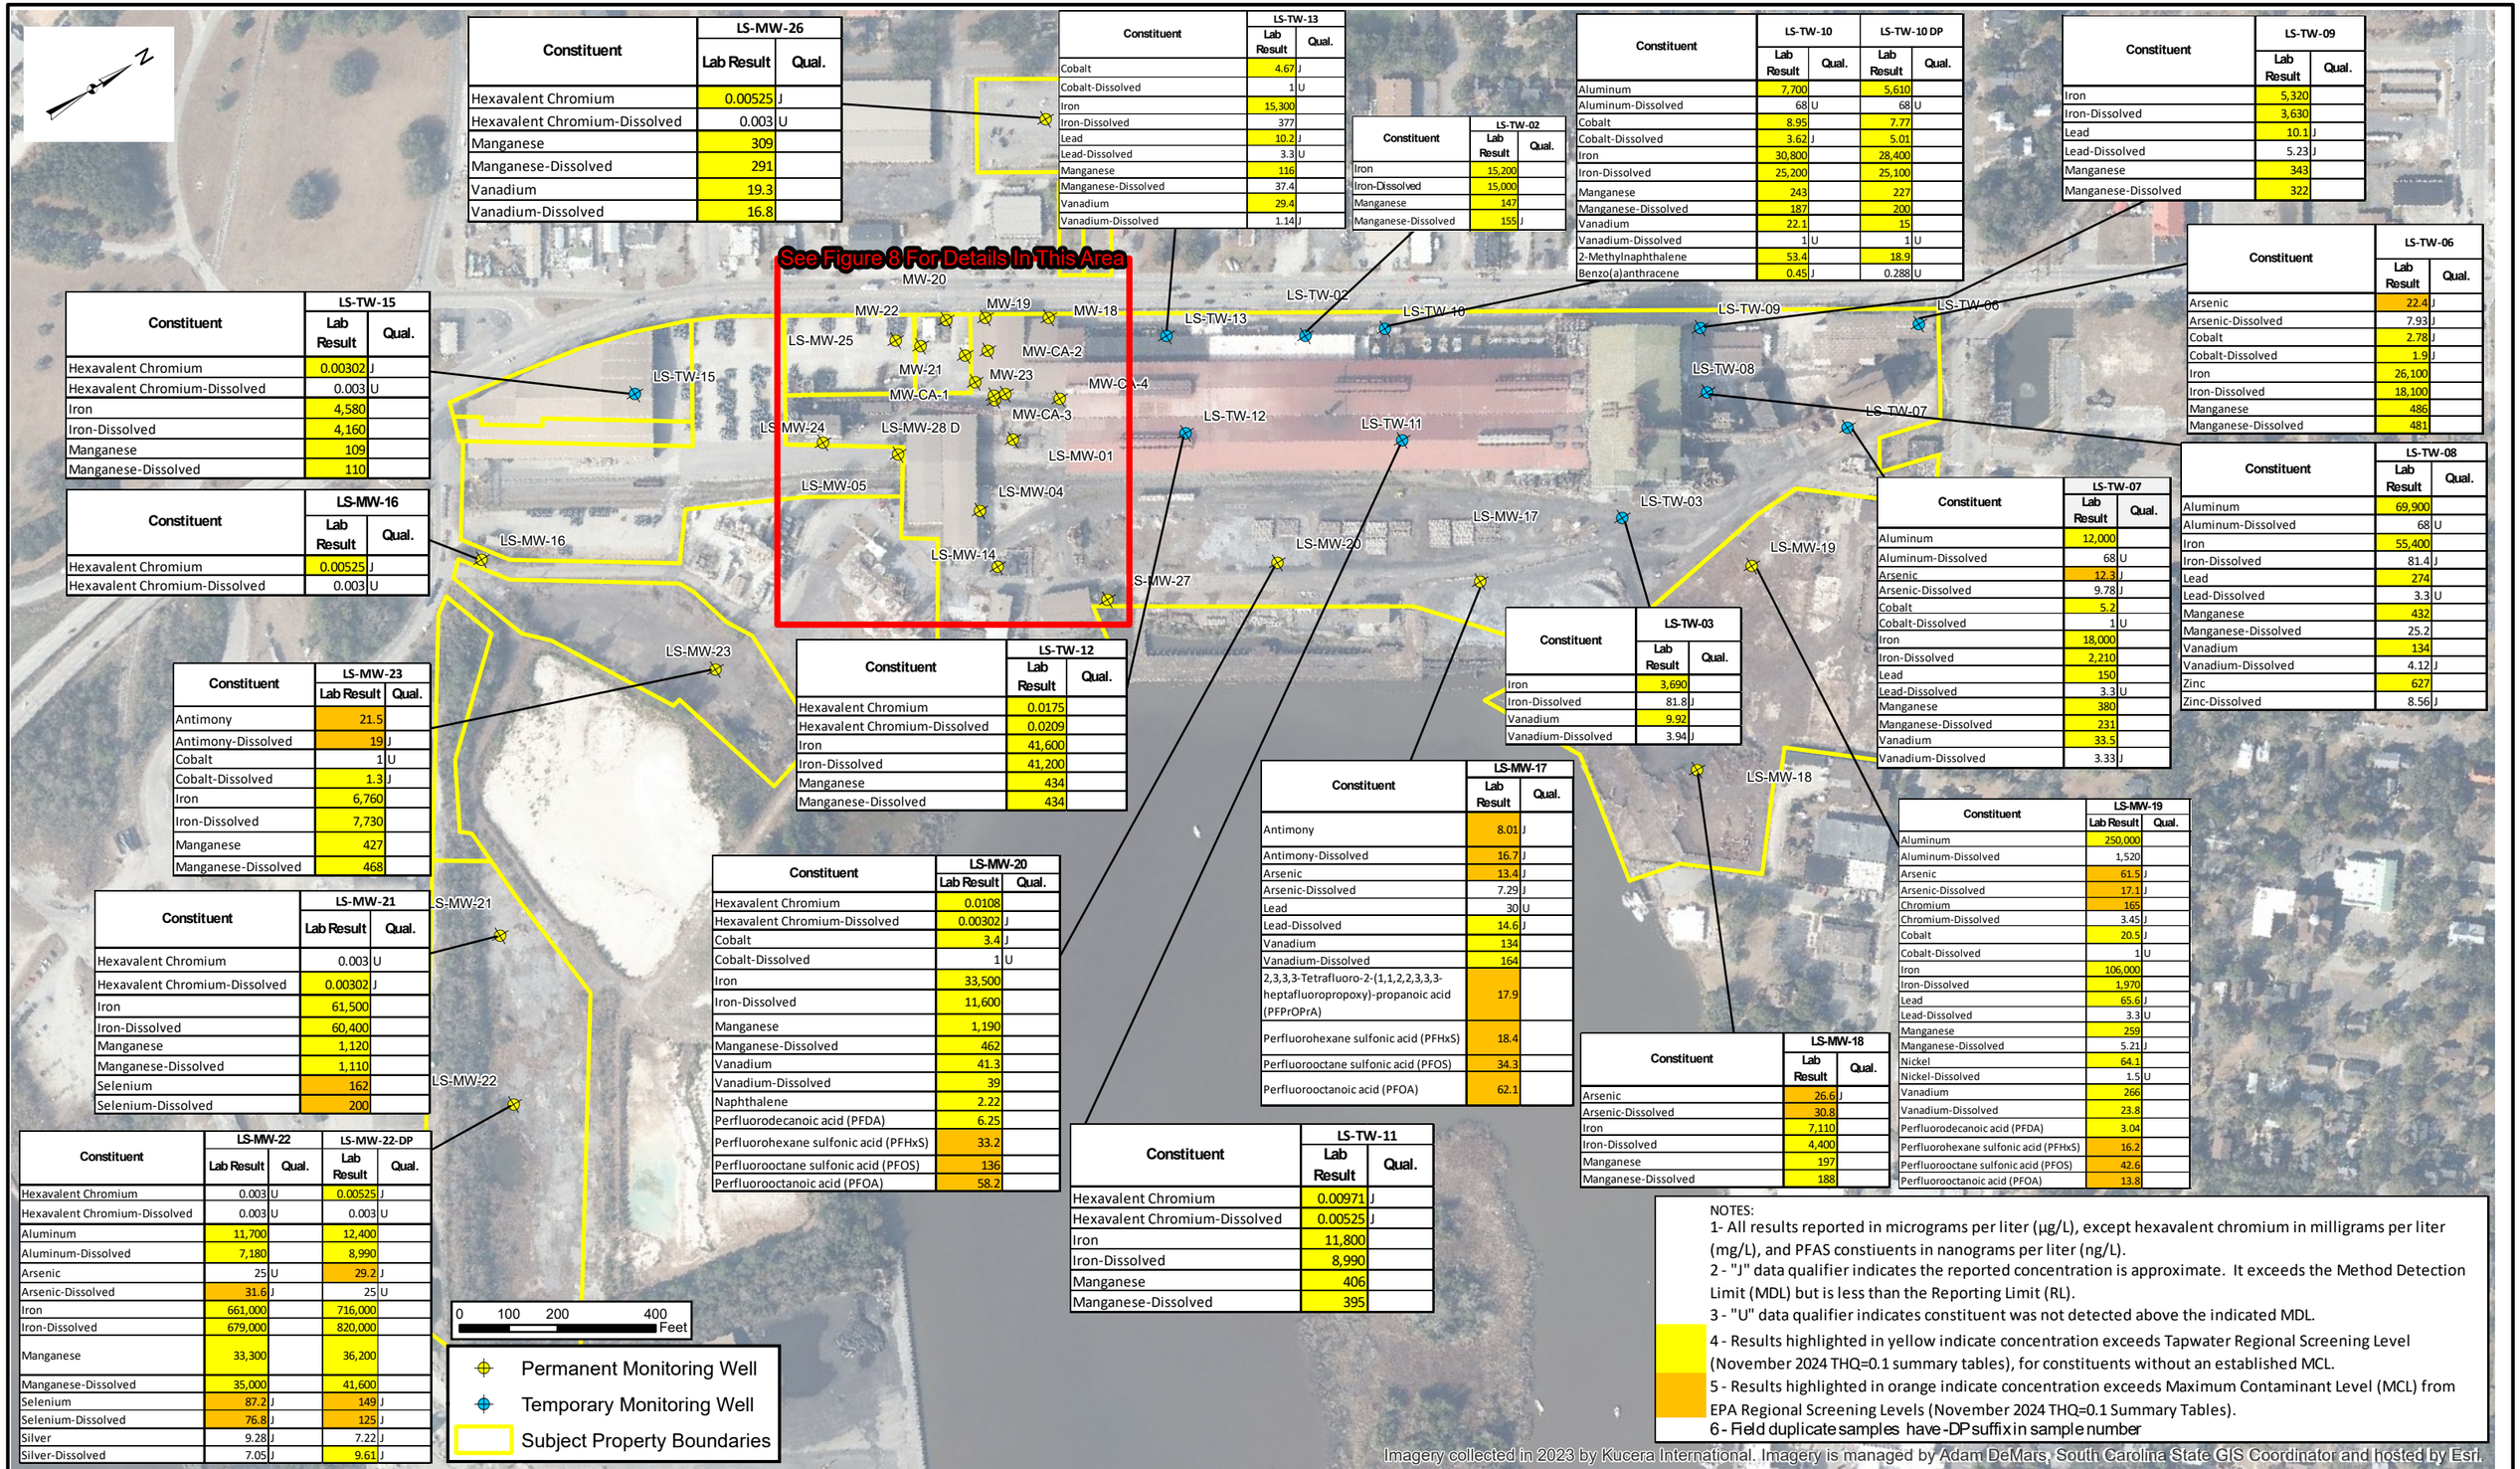
1 - All results reported in micrograms per kilogram (ug/Kg), except hexavalent chromium reported in milligrams per kilogram (mg/kg)
2 - J = Estimated concentration less than the Reporting Limit but greater than the Detection Limit
3 - U = Not Detected at indicated method detection limit.
4 - Numbers highlighted in yellow indicate concentration exceeds EPA Regional Screening Level for residential soil (November 2024 - THQ=0.1 Summary Tables).
5 - Numbers highlighted in orange indicate concentration exceeds EPA Regional Screening Level for industrial soil (November 2024 - THQ=0.1 Summary Tables).
6 - Sample depth in feet below land surface (' bls)
7 - Field duplicate samples have -DP suffix in sample number



Imagery collected in 2023 by Kucera International. Imagery is managed by Adam DeMars, South Carolina State GIS Coordinator and hosted by Esri.

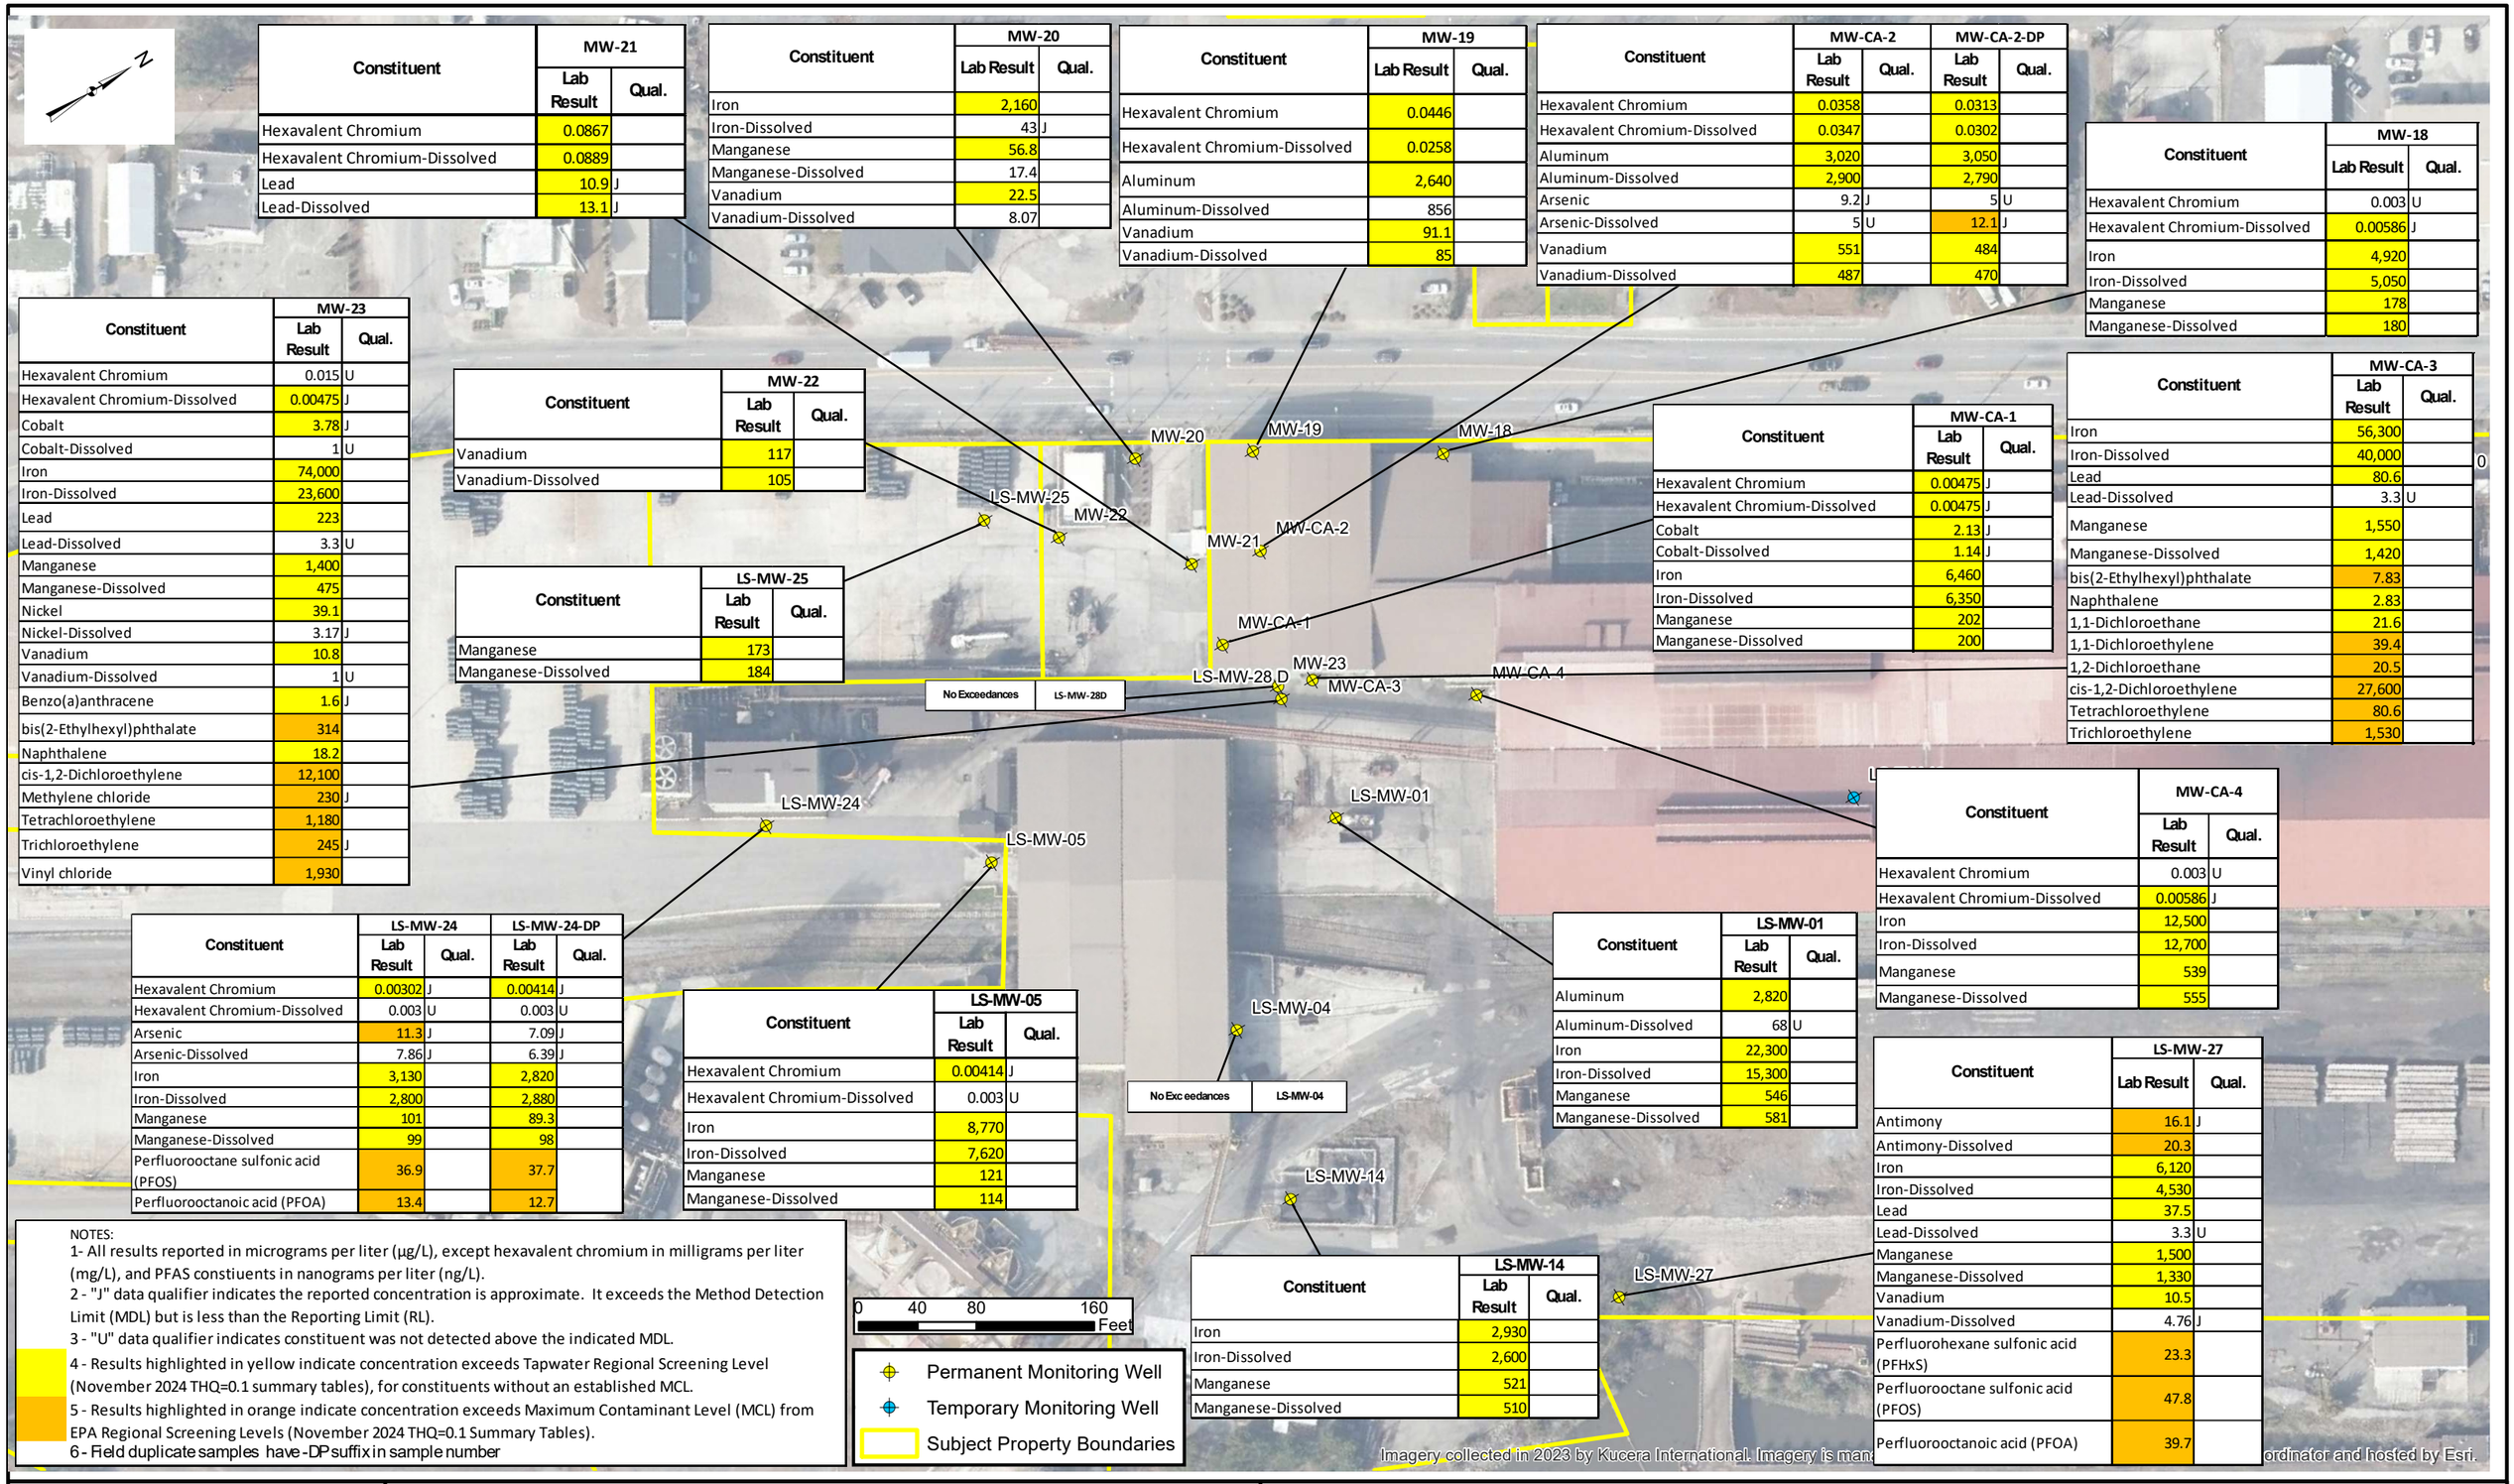
NOTES:
1- All results reported in micrograms per liter (µg/L), except hexavalent chromium in milligrams per liter (mg/L), and PFAS constiuents in nanograms per liter (ng/L).
2 - "J" data qualifier indicates the reported concentration is approximate. It exceeds the Method Detection Limit (MDL) but is less than the Reporting Limit (RL).
3 - "U" data qualifier indicates constituent was not detected above the indicated MDL.
4 - Results highlighted in yellow indicate concentration exceeds Tapwater Regional Screening Level (November 2024 THQ=0.1 summary tables), for constituents without an established MCL.
5 - Results highlighted in orange indicate concentration exceeds Maximum Contaminant Level (MCL) from EPA Regional Screening Levels (November 2024 THQ=0.1 Summary Tables).
6 - Field duplicate samples have -DP suffix in sample number



Imagery collected in 2023 by Kucera International. Imagery is managed by Adam DeMars, South Carolina State GIS Coordinator and hosted by Esri.

GROUNDWATER SAMPLE LOCATIONS WITH CONSTITUENTS EXCEEDING SCREENING LEVELS

PROJECT: RVDE00226 | DATE: AUGUST 12, 2026 | FIGURE 7

Constituent	MW-21 Lab Result	MW-21 Qual.
Hexavalent Chromium	0.0867	
Hexavalent Chromium-Dissolved	0.0889	
Lead	10.9	J
Lead-Dissolved	13.1	J

Constituent	MW-20 Lab Result	MW-20 Qual.
Iron	2,160	
Iron-Dissolved	43	J
Manganese	56.8	
Manganese-Dissolved	17.4	
Vanadium	22.5	
Vanadium-Dissolved	8.07	

Constituent	MW-19 Lab Result	MW-19 Qual.
Hexavalent Chromium	0.0446	
Hexavalent Chromium-Dissolved	0.0258	
Aluminum	2,640	
Aluminum-Dissolved	856	
Vanadium	91.1	
Vanadium-Dissolved	85	

Constituent	MW-CA-2 Lab Result	MW-CA-2 Qual.	MW-CA-2-DP Lab Result	MW-CA-2-DP Qual.
Hexavalent Chromium	0.0358		0.0313	
Hexavalent Chromium-Dissolved	0.0347		0.0302	
Aluminum	3,020		3,050	
Aluminum-Dissolved	2,900		2,790	
Arsenic	9.2	J	5	U
Arsenic-Dissolved	5	U	12.1	J
Vanadium	551		484	
Vanadium-Dissolved	487		470	

Constituent	MW-18 Lab Result	MW-18 Qual.
Hexavalent Chromium	0.003	U
Hexavalent Chromium-Dissolved	0.00586	J
Iron	4,920	
Iron-Dissolved	5,050	
Manganese	178	
Manganese-Dissolved	180	

Constituent	MW-23 Lab Result	MW-23 Qual.
Hexavalent Chromium	0.015	U
Hexavalent Chromium-Dissolved	0.00475	J
Cobalt	3.78	J
Cobalt-Dissolved	1	U
Iron	74,000	
Iron-Dissolved	23,600	
Lead	223	
Lead-Dissolved	3.3	U
Manganese	1,400	
Manganese-Dissolved	475	
Nickel	39.1	
Nickel-Dissolved	3.17	J
Vanadium	10.8	
Vanadium-Dissolved	1	U
Benzo(a)anthracene	1.6	J
bis(2-Ethylhexyl)phthalate	314	
Naphthalene	18.2	
cis-1,2-Dichloroethylene	12,100	
Methylene chloride	230	J
Tetrachloroethylene	1,180	
Trichloroethylene	245	J
Vinyl chloride	1,930	

Constituent	MW-22 Lab Result	MW-22 Qual.
Vanadium	117	
Vanadium-Dissolved	105	

Constituent	LS-MW-25 Lab Result	LS-MW-25 Qual.
Manganese	173	
Manganese-Dissolved	184	

Constituent	MW-CA-1 Lab Result	MW-CA-1 Qual.
Hexavalent Chromium	0.00475	J
Hexavalent Chromium-Dissolved	0.00475	J
Cobalt	2.13	J
Cobalt-Dissolved	1.14	J
Iron	6,460	
Iron-Dissolved	6,350	
Manganese	202	
Manganese-Dissolved	200	

Constituent	MW-CA-3 Lab Result	MW-CA-3 Qual.
Iron	56,300	
Iron-Dissolved	40,000	
Lead	80.6	
Lead-Dissolved	3.3	U
Manganese	1,550	
Manganese-Dissolved	1,420	
bis(2-Ethylhexyl)phthalate	7.83	
Naphthalene	2.83	
1,1-Dichloroethane	21.6	
1,1-Dichloroethylene	39.4	
1,2-Dichloroethane	20.5	
cis-1,2-Dichloroethylene	27,600	
Tetrachloroethylene	80.6	
Trichloroethylene	1,530	

Constituent	MW-CA-4 Lab Result	MW-CA-4 Qual.
Hexavalent Chromium	0.003	U
Hexavalent Chromium-Dissolved	0.00586	J
Iron	12,500	
Iron-Dissolved	12,700	
Manganese	539	
Manganese-Dissolved	555	

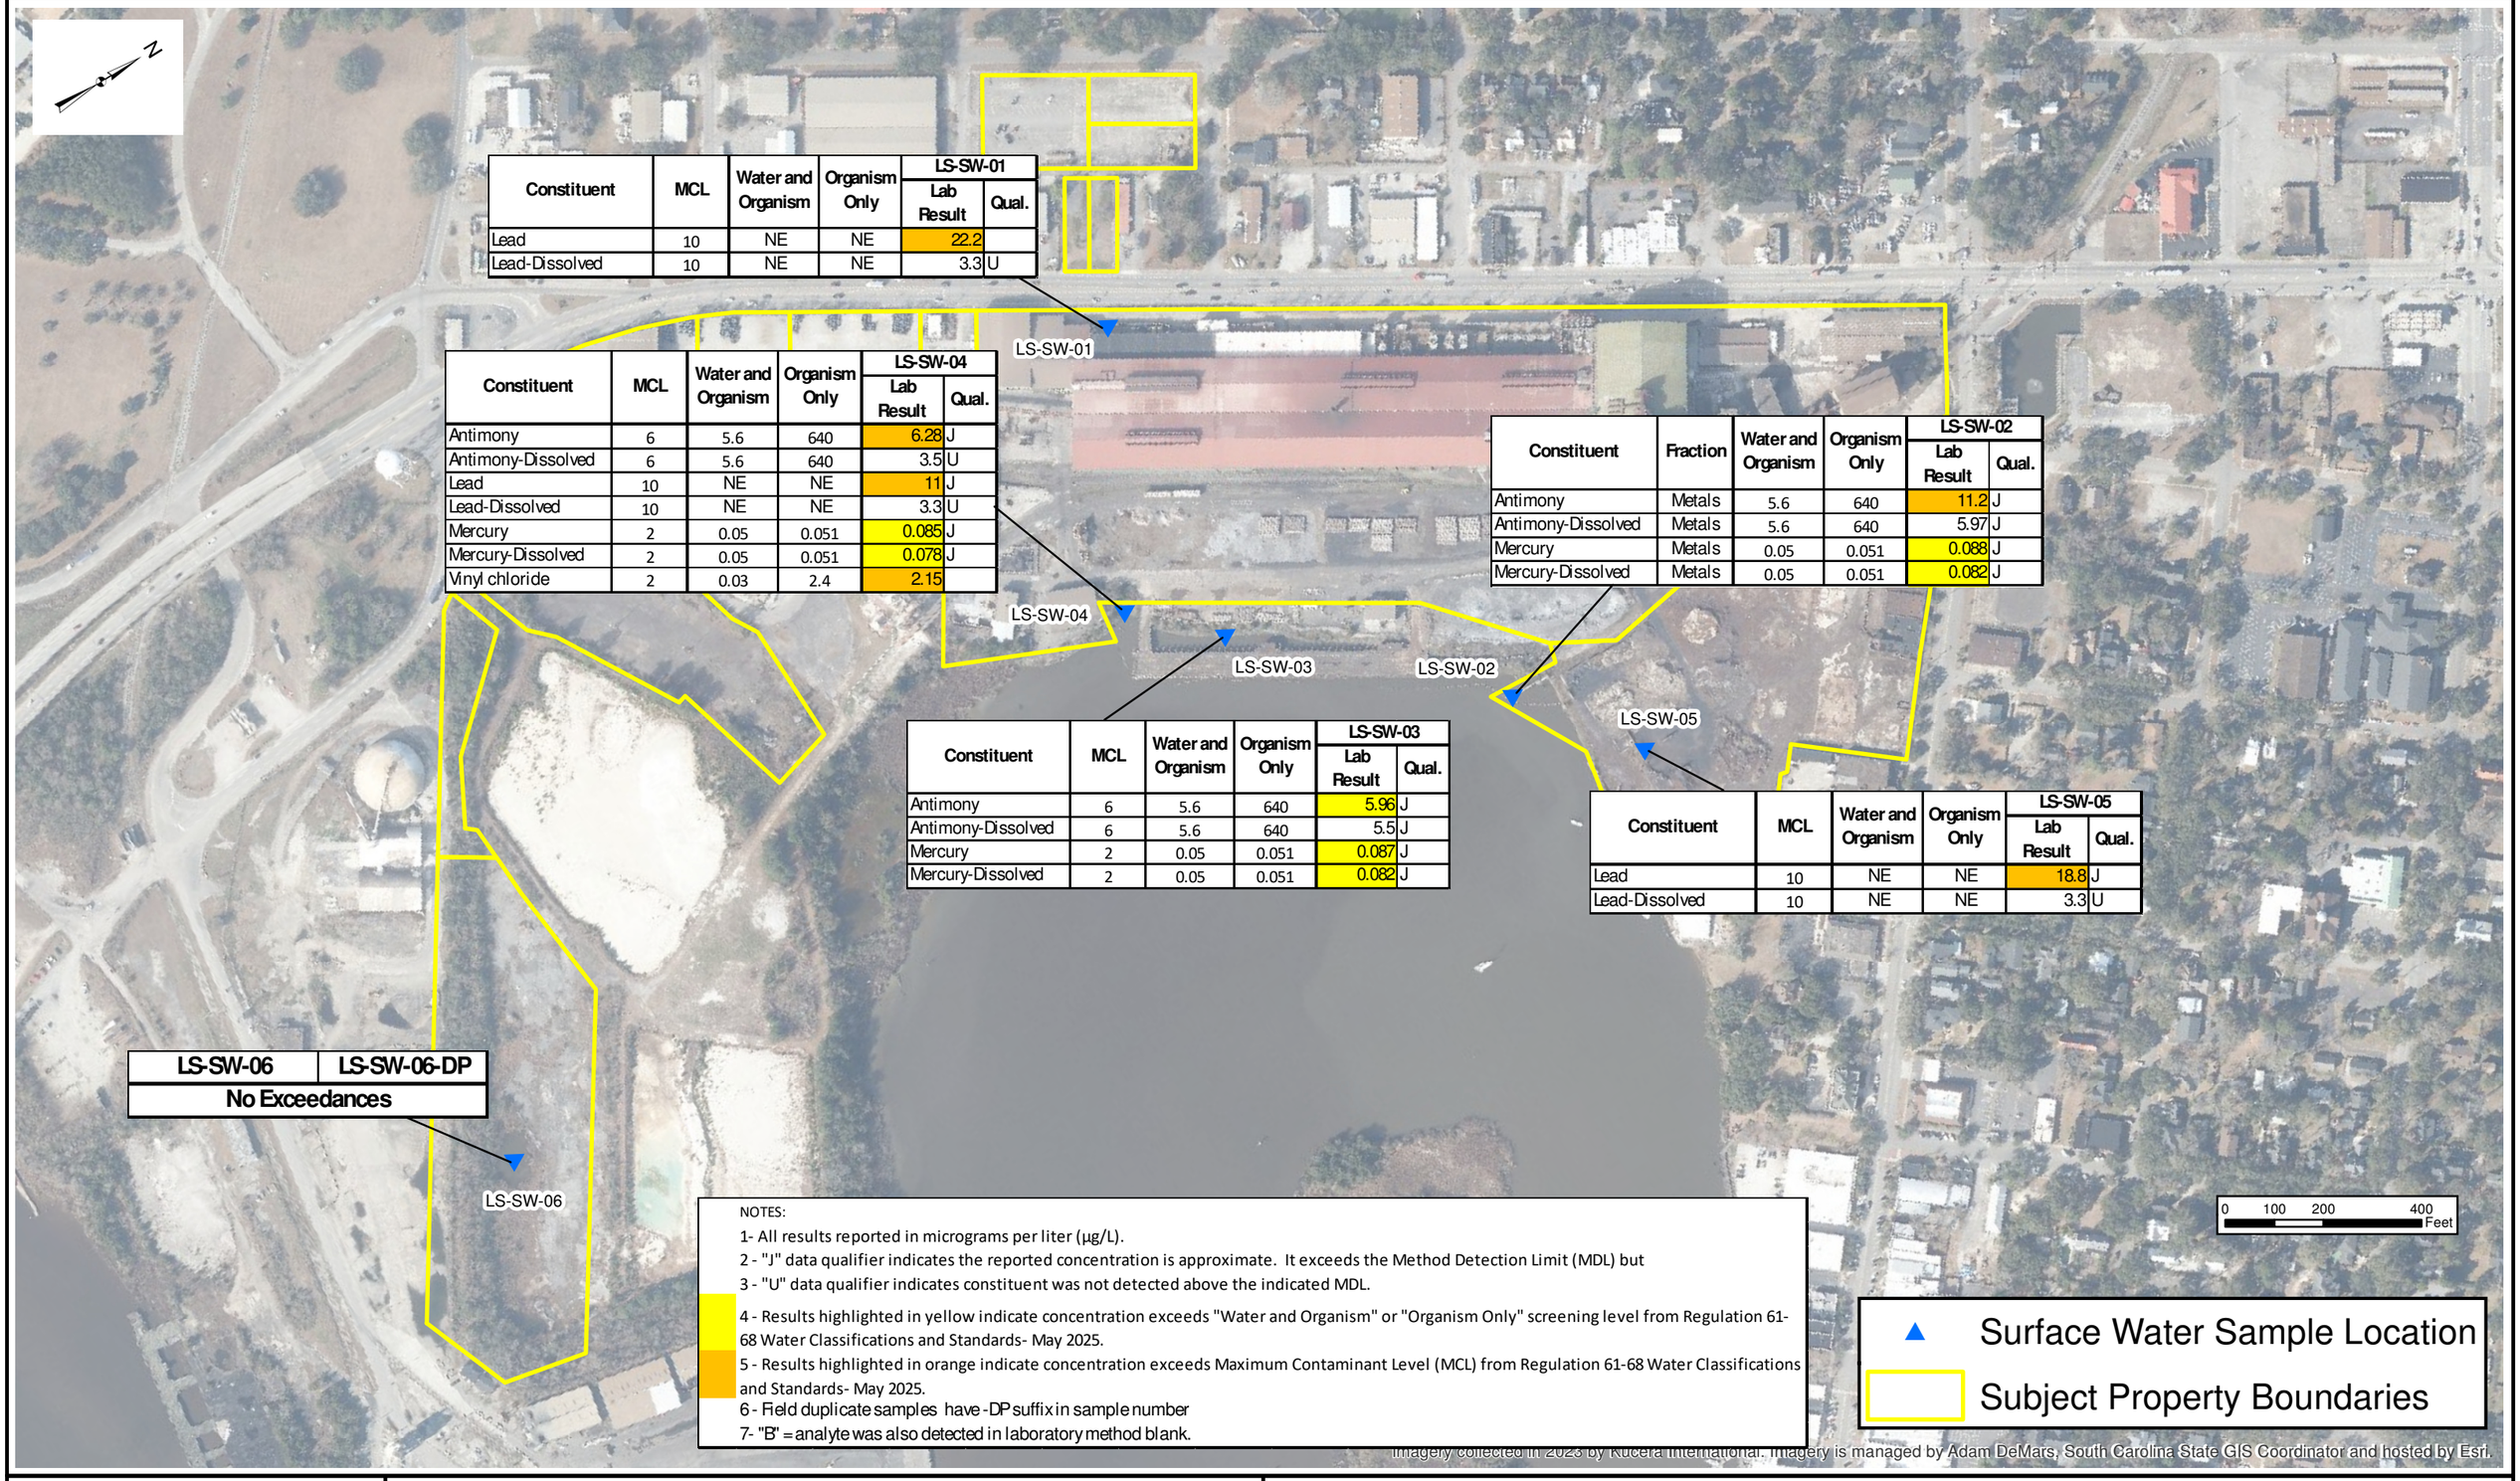
Constituent	LS-MW-24 Lab Result	LS-MW-24 Qual.	LS-MW-24-DP Lab Result	LS-MW-24-DP Qual.
Hexavalent Chromium	0.00302	J	0.00414	J
Hexavalent Chromium-Dissolved	0.003	U	0.003	U
Arsenic	11.3	J	7.09	J
Arsenic-Dissolved	7.86	J	6.39	J
Iron	3,130		2,820	
Iron-Dissolved	2,800		2,880	
Manganese	101		89.3	
Manganese-Dissolved	99		98	
Perfluorooctane sulfonic acid (PFOS)	36.9		37.7	
Perfluorooctanoic acid (PFOA)	13.4		12.7	

Constituent	LS-MW-05 Lab Result	LS-MW-05 Qual.
Hexavalent Chromium	0.00414	J
Hexavalent Chromium-Dissolved	0.003	U
Iron	8,770	
Iron-Dissolved	7,620	
Manganese	121	
Manganese-Dissolved	114	

Constituent	LS-MW-01 Lab Result	LS-MW-01 Qual.
Aluminum	2,820	
Aluminum-Dissolved	68	U
Iron	22,300	
Iron-Dissolved	15,300	
Manganese	546	
Manganese-Dissolved	581	

Constituent	LS-MW-14 Lab Result	LS-MW-14 Qual.
Iron	2,930	
Iron-Dissolved	2,600	
Manganese	521	
Manganese-Dissolved	510	

Constituent	LS-MW-27 Lab Result	LS-MW-27 Qual.
Antimony	16.1	J
Antimony-Dissolved	20.3	
Iron	6,120	
Iron-Dissolved	4,530	
Lead	37.5	
Lead-Dissolved	3.3	U
Manganese	1,500	
Manganese-Dissolved	1,330	
Vanadium	10.5	
Vanadium-Dissolved	4.76	J
Perfluorohexane sulfonic acid (PFHxS)	23.3	
Perfluorooctane sulfonic acid (PFOS)	47.8	
Perfluorooctanoic acid (PFOA)	39.7	



NOTES:
1- All results reported in micrograms per liter (µg/L), except hexavalent chromium in milligrams per liter (mg/L), and PFAS constiuents in nanograms per liter (ng/L).
2 - "J" data qualifier indicates the reported concentration is approximate. It exceeds the Method Detection Limit (MDL) but is less than the Reporting Limit (RL).
3 - "U" data qualifier indicates constituent was not detected above the indicated MDL.
4 - Results highlighted in yellow indicate concentration exceeds Tapwater Regional Screening Level (November 2024 THQ=0.1 summary tables), for constituents without an established MCL.
5 - Results highlighted in orange indicate concentration exceeds Maximum Contaminant Level (MCL) from EPA Regional Screening Levels (November 2024 THQ=0.1 Summary Tables).
6 - Field duplicate samples have -DP suffix in sample number

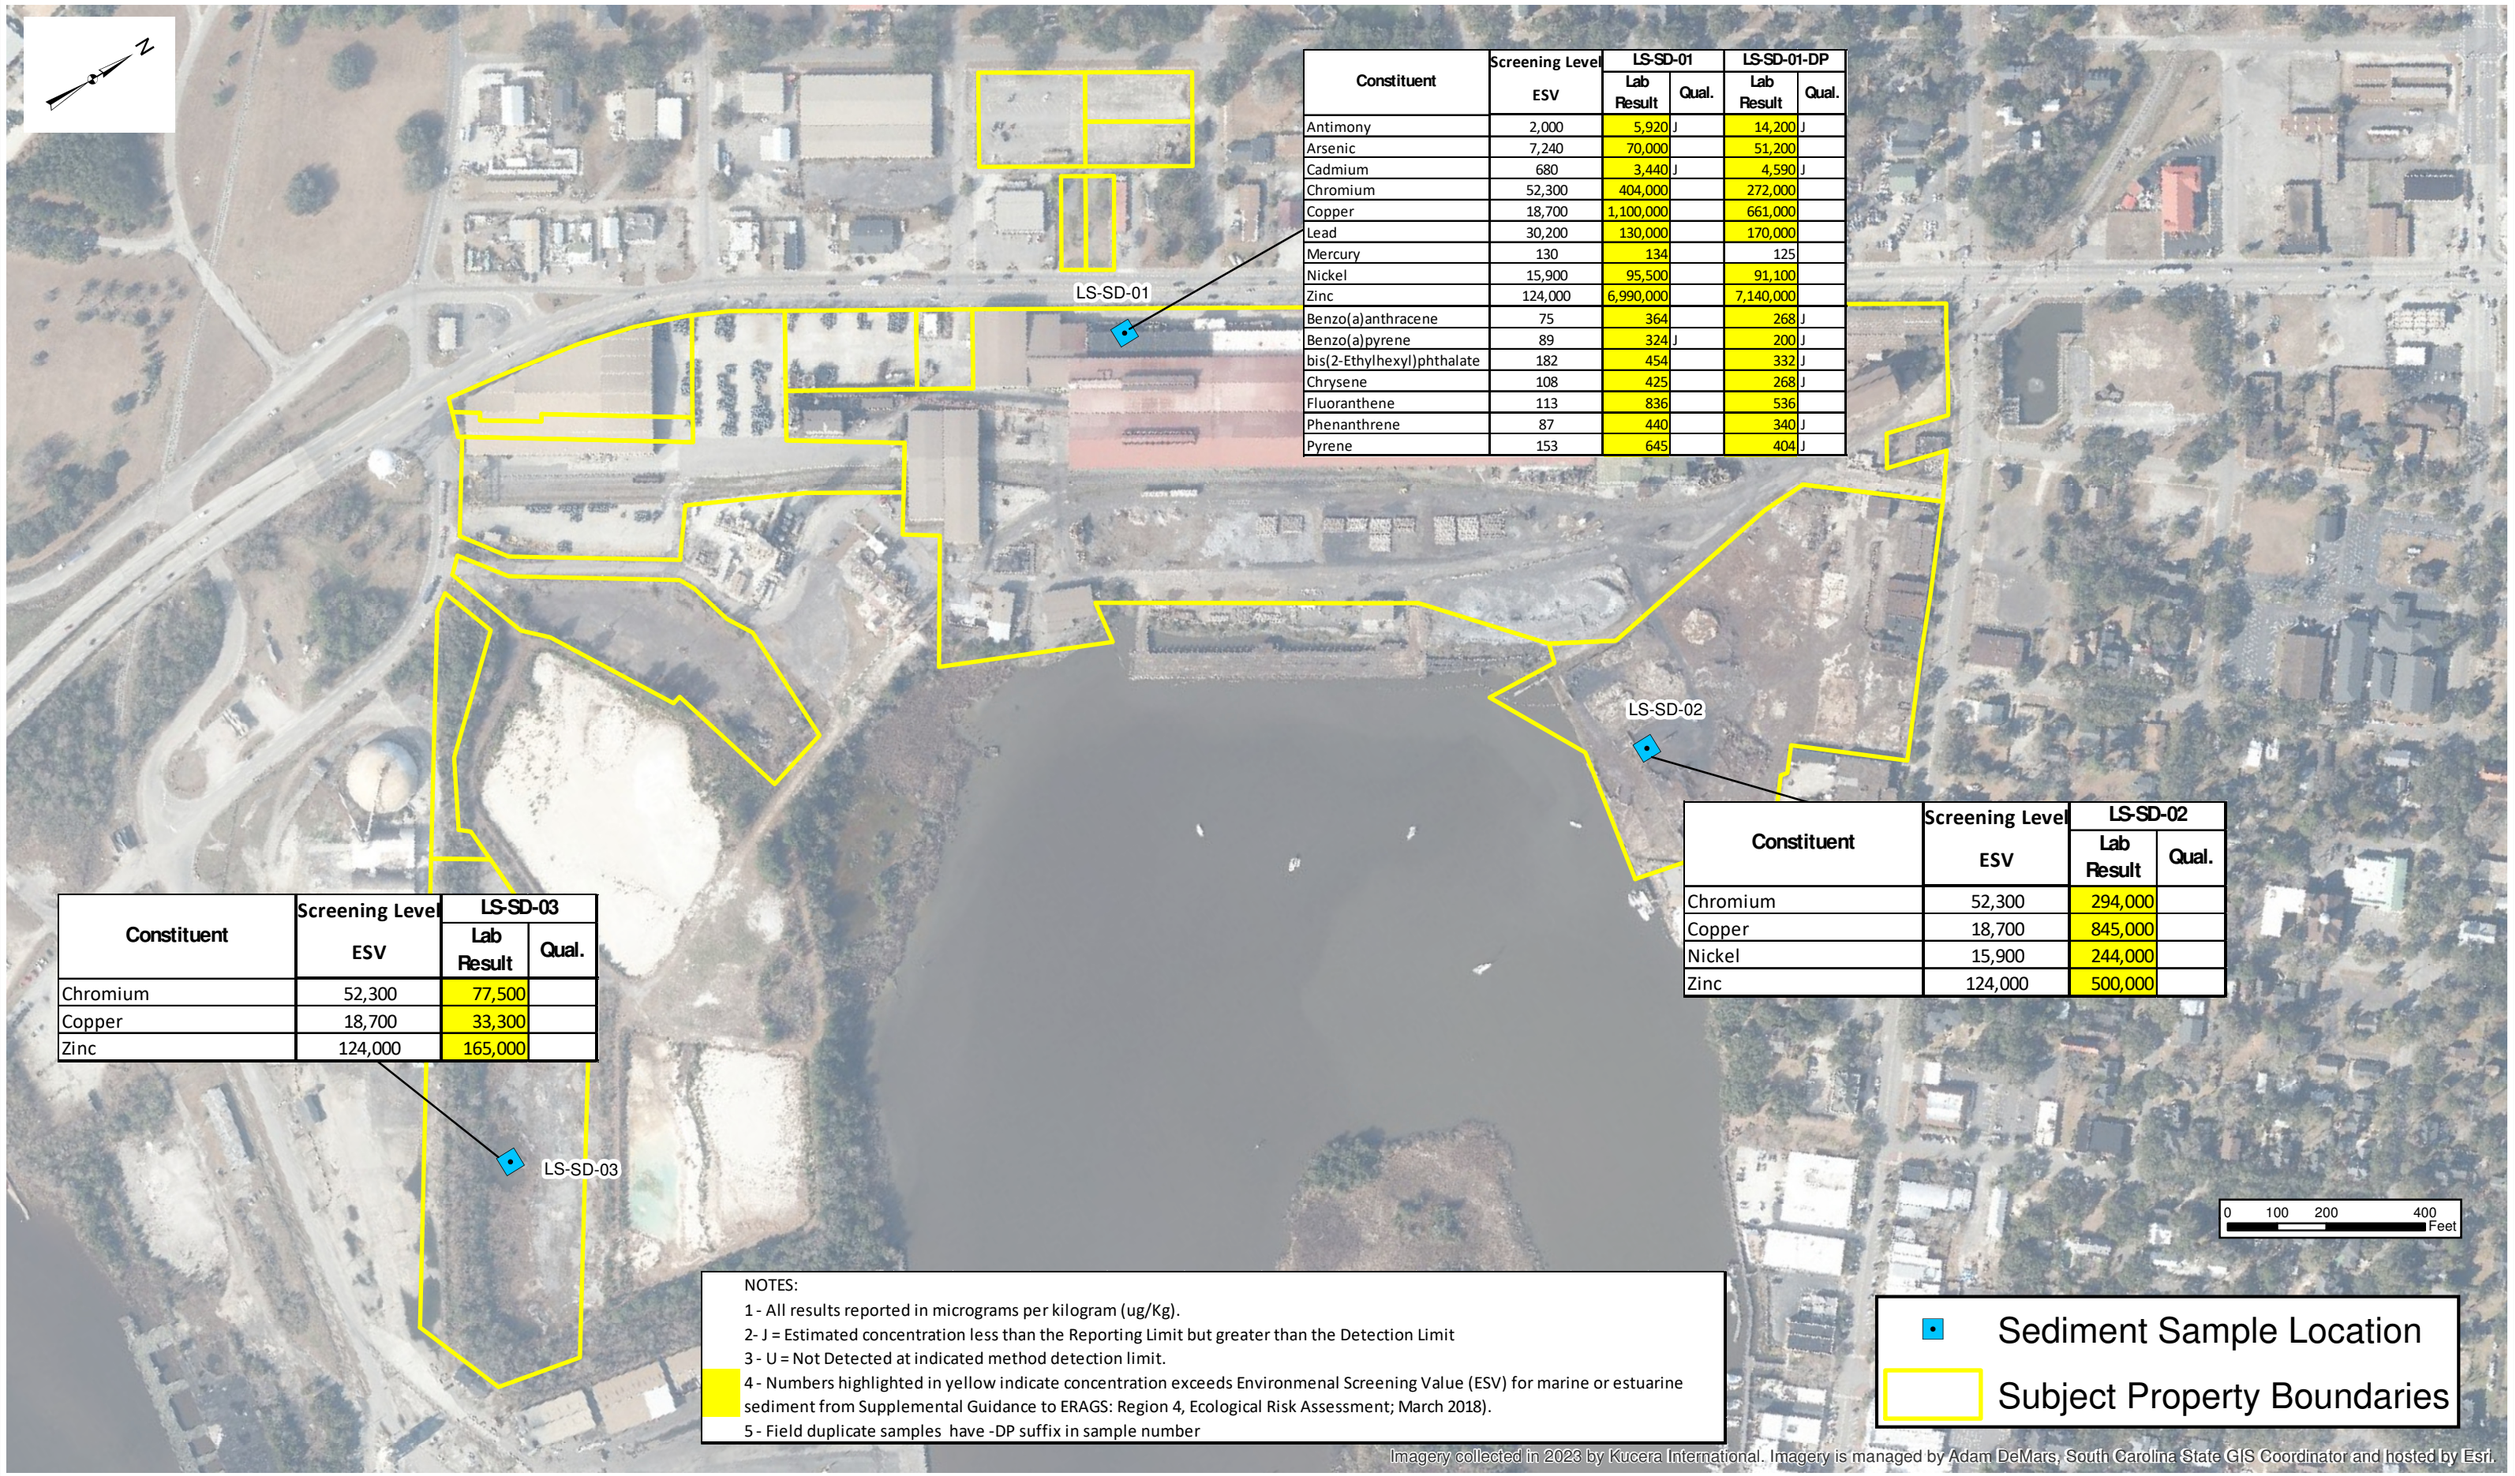
NOTES:
1- All results reported in micrograms per liter (µg/L).
2 - "J" data qualifier indicates the reported concentration is approximate. It exceeds the Method Detection Limit (MDL) but
3 - "U" data qualifier indicates constituent was not detected above the indicated MDL.
4 - Results highlighted in yellow indicate concentration exceeds "Water and Organism" or "Organism Only" screening level from Regulation 61-68 Water Classifications and Standards- May 2025.
5 - Results highlighted in orange indicate concentration exceeds Maximum Contaminant Level (MCL) from Regulation 61-68 Water Classifications and Standards- May 2025.
6 - Field duplicate samples have -DP suffix in sample number
7- "B" = analyte was also detected in laboratory method blank.



Imagery collected in 2023 by Kucera International. Imagery is managed by Adam DeMars, South Carolina State GIS Coordinator and hosted by Esri.

LS-PW-03	Intertidal Zone of Sampit River	Pore Water	1	1	1	1	1	1				1
LS-PW-04	Intertidal Zone of Sampit River	Pore Water	1	1	1	1	1	1				1
Field Duplicate	One Pore Water Sample	Pore Water	1	1	1	1	1	1				1
Field Equipment Blank	Soil sampling equipment rinsate	Laboratory-provided deionized water	1	1	1	1						
Field Equipment Blank	Groundwater sampling equipment rinsate	Laboratory-provided deionized water	1	1	1	1						
Trip Blank	Assesses field and laboratory accuracy; One per shipment containing samples for VOC	Laboratory-provided deionized water	1									

* VOC analyses will not be conducted on surface soil samples.
PCBs = Polychlorinated biphenyls
TAL Metals = Target Analyte List Metals
TCL = EPA Target Compound List
SVOCs = Semivolatile organic compounds
VOCs = Volatile organic compounds
PFAS = Perfluorinated Alkyl Acids
Dissolved metals analysis conducted on field filtered groundwater samples.

Table 2
Summary of Constituents Detected in Soil Samples
Liberty Steel Property
Georgetown, South Carolina
VCC 25-8848-NRP

Table 2
Summary of Constituents Detected in Soil Samples
Liberty Steel Property
Georgetown, South Carolina
VCC 25-8848-NRP

Notes:
1 - This table lists analytes detected in one or more soil samples. See the laboratory analytical reports for the full list of target analytes.
2 - All results reported in micrograms per kilogram (ug/Kg), except hexavalent chromium reported in milligrams per kilogram (mg/kg)
3 - Samples collected March 9-26, May 26-29, and June 2, 2026
4 - Regional Screening Level (RSL) for residential soil (R-RSL) industrial soil (I-RSL) and Maximum Contaminant Level (MCL)-Based Soil Screening Level (MCL-SSL) for protection of groundwater from Regional Screening Levels for Chemical Contaminants at Superfund Sites USEPA (November 2024 - THQ=0.1 Summary Tables).
5 - J = Estimated concentration less than the Reporting Limit but greater than the Detection Limit
6 - U = Not Detected at indicated method detection limit.
7 - Ub = The sample result is qualitatively suspect because the analyte was detected in a field and/or laboratory blank at a similar level.
8 - UJ = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
9 - Jl = The reported concentration is approximate and probably biased towards lower values than the actual concentration of the analyte in the sample.
10 - Jh = The reported concentration is approximate and probably biased towards higher values than the actual concentration of the analyte in the sample.
11 - R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
12 - Results highlighted in yellow indicate concentration exceeds R-RSL.
13 - Results highlighted in orange indicates concentration exceeds the I-RSL
14 - Results higlighted in green indicate concentration exceeds MCL-SSL
15 - Sample depth in feet below land surface (' bls)
16 - Field duplicate samples have -DP suffix in sample number
17 - "NE" = Not established
18 - "NA" = Not analyzed
19 - * RSLs for Chromium III

Table 3

Summary of Well Construction and Groundwater Elevation Data

Liberty Steel Property

Georgetown, South Carolina

Table 4
Summary of Constituents Detected in Groundwater Samples
Liberty Steel Property
Georgetown, South Carolina
VCC 25-8848-NRP

NOTES:
1 - This table lists analytes detected in one or more groundwater samples. See the laboratory analytical reports for the full list of target analytes.
2 - Regional Screening Level (RSL) for Tapwater from USEPA *Regional Screening Level (RSL) Summary Table* (THQ=0.1), November 2024.
3 - MCL = Maximum Contaminant Level for South Carolina Class GB Groundwater.
4- "NE" indicates RSL or MCL not established for constituent.
5 - "J" data qualifier indicates the reported concentration is approximate. It exceeds the Method Detection Limit (MDL) but is less than the Reporting Limit (RL).
6 - "U" data qualifier indicates constituent was not detected above the indicated MDL.
7 - "Ub" = The sample result is qualitatively suspect because the analyte was detected in a field and/or laboratory blank at a similar level.
8 - "UJ" = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
9 - "Jl" = The reported concentration is approximate and probably biased towards lower values than the actual concentration of the analyte in the sample.
10 - "Jh" = The reported concentration is approximate and probably biased towards higher values than the actual concentration of the analyte in the sample.
11 - "R" = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
12 - All results reported in micrograms per liter (µg/L), except hexavalent chromium in milligrams per liter (mg/L), and PFAS constiuents in nanograms per liter (ng/L).
13 - Results highlighted in yellow indicate concentration exceeds Tapwater RSL November 2024 summary tables, for constituents without an established MCL.
14 - Results highlighted in orange indicate concentration exceeds Maximum Contaminant Level (MCL) for South Carolina Class GB groundwater.
15 - Samples collected March 4 through April 10 and June 8, 2026
16 - Field duplicate samples have -DP suffix in sample number
17 - "NA" = Not analyzed

NOTES:
1 - This table lists analytes detected in one or more surface water samples. See the laboratory analytical reports for the full list of target analytes.
2- All results reported in micrograms per liter (µg/L).
3 - Human health screening levels MCL : Maximum Contaminant Level and screening levels for consumption of "Water and Organism" or "Organism Only" from Regulation 61-68 Water Classifications and Standards- May 2025.
4 - "NE" indicates screening level not established for constituent.
5 - "J" data qualifier indicates the reported concentration is approximate. It exceeds the Method Detection Limit (MDL) but is less than the Reporting Limit (RL).
6 - "U" data qualifier indicates constituent was not detected above the indicated MDL.
7 - "Ub" = The sample result is qualitatively suspect because the analyte was detected in a field and/or laboratory blank at a similar level.
8 - "Jl" = The reported concentration is approximate and probably biased towards lower values than the actual concentration of the analyte in the sample.
9 - Results highlighted in yellow indicate concentration exceeds "Water and Organism" or "Organism Only" screening level
10 - Results highlighted in orange indicate concentration exceeds Maximum Contaminant Level (MCL)
11 - Samples collected March 12 through April 9, 2026
12 - Field duplicate samples have -DP suffix in sample number
13 - "B" = analyte was also detected in laboratory method blank.

Notes:

1 - This table lists analytes detected in one or more sediment samples. See the laboratory analytical reports for the full list of target analytes.

2 - All results reported in micrograms per kilogram (ug/Kg), except hexavalent chromium reported in milligrams per kilogram (mg/kg)

3 - Samples collected March 10 through April 9, 2026

4 - Environmental Screening Value (ESV) for marine or estuarine sediment from Supplemental Guidance to ERAGS: Region 4, Ecological Risk Assessment; March 2018)

5 - J = Estimated concentration less than the Reporting Limit but greater than the Detection Limit

6 - U = Not Detected at indicated method detection limit.

7 - Jh = The reported concentration is approximate and probably biased towards higher values than the actual concentration of the analyte in the sample.

8 - Numbers highlighted in yellow indicate concentration exceeds ESV.

9 - Field duplicate samples have -DP suffix in sample number

10 - "NE" = Not Established

Pyrene	SVOCs	12	NE	830	4,000	ug/L	0.29	U	0.291	U	0.408	J	0.282	U	0.982	
Methylene chloride	VOCs	11	5	4.6	590	ug/L	3.38	BJ	3.8	BJ	3.49	BJ	3.3	BJ	3.06	BJ

NOTES:
1 - This table lists analytes detected in one or more pore water samples. See the laboratory analytical reports for the full list of target analytes.
2 - Regional Screening Level (RSL) for Tapwater from USEPA *Regional Screening Level (RSL) Summary Table* (THQ=0.1), November 2024.
3 - MCL = Maximum Contaminant Level for South Carolina Class GB Groundwater.
4 - "NE" indicates RSL or MCL not established for constituent.
5 - "J" data qualifier indicates the reported concentration is approximate. It exceeds the Method Detection Limit (MDL) but is less than the Reporting Limit (RL).
6 - "U" data qualifier indicates constituent was not detected above the indicated method detection limit (MDL).
7 - "Ub" = The sample result is qualitatively suspect because the analyte was detected in a field and/or laboratory blank at a similar level.
8 - "UJ" = The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
9 - All results reported in micrograms per liter (µg/L), except hexavalent chromium in milligrams per liter (mg/L), and PFAS constiuents in nanograms per liter (ng/L).
10 - Results highlighted in yellow indicate concentration exceeds Tapwater Regional Screening Level (November 2024 - THQ=0.1 summary tables), for constituents without an established MCL.
11 - Results highlighted in orange indicate concentration exceeds Maximum Contaminant Level (MCL) (November 2024 - THQ=0.1 summary tables).
12 - Results highlighted in green indicate concentration exceeds "Water and Organism" or "Organism Only" screening level.
13 - Samples collected April 8, 2026
14 - Field duplicate samples have -DP suffix in sample number
15 - "NE" = Not established

MONITORING WELL INSTALLATION LOGS, WELL RECORDS, AND GROUNDWATER SAMPLE DATA SHEETS

SC DEPARTMENT of ENVIRONMENTAL SERVICES

Water Well Record
Bureau of Water
2600 Bull Street, Columbia, SC 29201-1708; (803) 898-4300

Note: *Personal information provided on this document is subject to public scrutiny or release.*

1. WELL OWNER INFORMATION:
Name: Liberty River, LLC (last) (first)
Address: 10 State Hwy 35, Suite 100
City: Red Bank State: NJ Zip: 07701-0000
Telephone: Work: (732) 268-7104 Home:

2. LOCATION OF WELL: **COUNTY:** Georgetown
Name: Liberty Steel
Street Address: 1227 Front Street
City: Georgetown Zip: 29440-0000
Latitude: Longitude:

3. PUBLIC SYSTEM NAME: **PUBLIC SYSTEM NUMBER:**

4. ABANDONMENT: ☐ Yes ☑ No
Give Details Below
Grouted Depth: from _____ ft. to _____ ft.

Formation Description	*Thickness of Stratum	Depth to Bottom of Stratum
See Geologist Log		
*Indicate Water Bearing Zones (Use a 2nd sheet if needed)		

5. REMARKS:
LS-MW-01

6. TYPE: ☐ Mud Rotary ☐ Jetted ☑ Bored ☐ Dug ☐ Air Rotary ☐ Driven ☐ Cable tool ☐ Other

7. PERMIT NUMBER: VCC 25-8848-NRP

8. USE:
☐ Residential ☐ Public Supply ☐ Process
☐ Irrigation ☐ Air Conditioning ☐ Emergency
☐ Test Well ☑ Monitor Well ☐ Replacement

9. WELL DEPTH (completed) Date Started: 03/24/26
13.5 ft. Date Completed: 03/25/26

10. CASING: ☑ Threaded ☐ Welded
Diam.: 2-inch
Type: ☑ PVC ☐ Galvanized ☐ Steel ☐ Other
2 in. to 3.5 ft. depth
_____ in. to _____ ft. depth
Height: Above / Below Surface
Weight _____ ft.
Drive Shoe? _____ lb./ft.
☐ Yes ☐ No

11. SCREEN:
Type: PVC Diam.: 2-inch
Slot/Gauge: 0.010 Length: 10'
Set Between: 13.5 ft. and 3.5 ft.
_____ ft. and _____ ft.
NOTE: MULTIPLE SCREENS USE SECOND SHEET
Sieve Analysis ☐ Yes (please enclose) ☑ No

12. STATIC WATER LEVEL _____ ft. below land surface after 24 hours

13. PUMPING LEVEL Below Land Surface.
_____ ft. after _____ hrs. Pumping _____ G.P.M.
Pumping Test: ☐ Yes (please enclose) ☑ No
Yield: _____

14. WATER QUALITY
Chemical Analysis ☑ Yes ☐ No Bacterial Analysis ☐ Yes ☑ No
Please enclose lab results.

15. ARTIFICIAL FILTER (filter pack) ☑ Yes ☐ No
Installed from 13.5 ft. to 1.5 ft.
Effective size #2 Uniformity Coefficient _____

16. WELL GROUTED? ☑ Yes ☐ No
☐ Neat Cement ☑ Bentonite ☐ Bentonite/Cement ☑ Other Concrete
Depth: From 1.5 ft. to LS ft.

17. NEAREST SOURCE OF POSSIBLE CONTAMINATION: _____ ft. _____ direction
Type _____
Well Disinfected ☐ Yes ☑ No Type: _____ Amount: _____

18. PUMP: Date installed: _____ Not installed ☑
Mfr. Name: _____ Model No.: _____
H.P._____ Volts_____ Length of drop pipe_____ ft. Capacity ____ gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

_____ ft. after _____ hrs. Pumping _____ G.P.M.
Pumping Test: ☐ Yes (please enclose) ☑ No
Yield: _____

14. WATER QUALITY
Chemical Analysis ☑ Yes ☐ No Bacterial Analysis ☐ Yes ☑ No
Please enclose lab results.

15. ARTIFICIAL FILTER (filter pack) ☑ Yes ☐ No
Installed from 12 ft. to 1 ft.
Effective size #2 Uniformity Coefficient _____

16. WELL GROUTED? ☑ Yes ☐ No
☐ Neat Cement ☑ Bentonite ☐ Bentonite/Cement ☐ Other _____
Depth: From 1 ft. to LS ft.

17. NEAREST SOURCE OF POSSIBLE CONTAMINATION: _____ ft. _____ direction
Type _____
Well Disinfected ☐ Yes ☑ No Type: _____ Amount: _____

18. PUMP: Date installed: _____ Not installed ☑
Mfr. Name: _____ Model No.: _____
H.P._____ Volts_____ Length of drop pipe_____ ft. Capacity ____ gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

Set Between: 12 ft. and 2 ft.
_____ ft. and _____ ft.
NOTE: MULTIPLE SCREENS USE SECOND SHEET
Sieve Analysis ☐ Yes (please enclose) ☑ No

12. STATIC WATER LEVEL _____ ft. below land surface after 24 hours

13. PUMPING LEVEL Below Land Surface.
_____ ft. after _____ hrs. Pumping _____ G.P.M.
Pumping Test: ☐ Yes (please enclose) ☑ No
Yield: _____

14. WATER QUALITY
Chemical Analysis ☑ Yes ☐ No Bacterial Analysis ☐ Yes ☑ No
Please enclose lab results.

15. ARTIFICIAL FILTER (filter pack) ☑ Yes ☐ No
Installed from 2 ft. to 1 ft.
Effective size #2 Uniformity Coefficient _____

16. WELL GROUTED? ☑ Yes ☐ No
☐ Neat Cement ☑ Bentonite ☐ Bentonite/Cement ☑ Other Concrete
Depth: From 1 ft. to LS ft.

17. NEAREST SOURCE OF POSSIBLE CONTAMINATION: _____ ft. _____ direction
Type _____
Well Disinfected ☐ Yes ☑ No Type: _____ Amount: _____

18. PUMP: Date installed: _____ Not installed ☑
Mfr. Name: _____ Model No.: _____
H.P._____ Volts_____ Length of drop pipe_____ ft. Capacity ____ gpm
TYPE: ☐ Submersible ☐ Jet (shallow) ☐ Turbine ☐ Jet (deep) ☐ Reciprocating ☐ Centrifugal

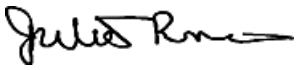
Re: Liberty Steel VCC Sampling
Work Order: 767474

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 10, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 767474 in the left-hand footer of the data report. The report has been revised to include VOC analysis for 1,4-Dioxane.



The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 767474 GEL Work Order: 767474

The Qualifiers in this report are defined as follows:

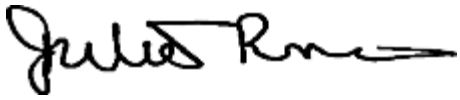
* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

E Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated



Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Notes:

The Qualifiers in this report are defined as follows:

U	U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
E	E	Concentration of the target analyte exceeds the instrument calibration range
J	J	Value is estimated
Q	Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
GEL Engineering, LLC
SDG #: 767474

GC/MS Volatile

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2965128

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767474001	LS-TB-030926
1206413964	Laboratory Control Sample (LCS) **Batch 2965128**
1206413965	Laboratory Control Sample (LCS)
1206413966	Method Blank (MB)
1206413967	Laboratory Control Sample Duplicate (LCSD)
1206413968	Laboratory Control Sample Duplicate (LCSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample Duplicate (LCSD)
An LCS/LCSD pair were analyzed in order to demonstrate precision and accuracy.

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206413964 (LCS)	Carbon disulfide	136* (70%-130%)
1206413968 (LCSD)	1, 4-Dioxane	133* (70%-130%)

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2965810

Preparation Method: SW846 5035
Preparation Procedure: GL-OA-E-039 REV# 14
Preparation Batch: 2965809

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767474003	LS-SB-32-3.0
767474006	LS-SB-08-3.0

1206415271	767858001(NonSDG) Matrix Spike (MS)
1206415272	767858001(NonSDG) Matrix Spike Duplicate (MSD)
1206415273	767858001(NonSDG) Matrix Spike (MS)
1206415274	767858001(NonSDG) Matrix Spike Duplicate (MSD)
1206416103	Laboratory Control Sample (LCS)
1206416104	Laboratory Control Sample (LCS)
1206416105	Method Blank (MB)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples 767474003 (LS-SB-32-3.0) and 767474006 (LS-SB-08-3.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206415268 (LCS)	Vinyl chloride	156* (54%-142%)

Matrix Spike/Matrix Spike Duplicate Recovery Statement
The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The associated spike and/or spike duplicate passed recoveries near the lower/upper end of the limits.

Sample	Analyte	Value
1206415272 (Non SDG 767858001MSD)	Vinyl chloride	155* (32%-146%)

Internal Standard (ISTD) Acceptance
In sample 767474006 (LS-SB-08-3.0), internal standard responses were outside the required acceptance criteria. Sample re-analysis confirmed matrix interference. The initial results are reported.

Technical Information

Sample Dilutions/Methanol Dilutions
Samples 1206415271 (Non SDG 767858001MS), 1206415272 (Non SDG 767858001MSD), 1206415273 (Non SDG 767858001MS) and 1206415274 (Non SDG 767858001MSD) were analyzed employing a methanol dilution extraction procedure because the sample matrices were not amenable to more concentrated analyses.

Sample Re-extraction/Re-analysis
Sample 767474006 (LS-SB-08-3.0) was re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analysis confirmed. The initial results are reported.

GC/MS Semivolatile

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2958994

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2958991

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767474003	LS-SB-32-3.0
767474004	LS-SB-31-1.0
767474005	LS-SB-08-1.0
767474006	LS-SB-08-3.0
1206402572	Method Blank (MB) **Batch 2958994**
1206402573	Laboratory Control Sample (LCS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Sample Dilutions
Sample 767474005 (LS-SB-08-1.0) was diluted because the extract was very dark and/or viscous. The data from the

dilution were reported.

Sample Re-extraction/Re-analysis
Sample 767474002 (LS-SB-32-1.0) was re-extracted within holding due to surrogate failure. The passing re-extraction data were reported.

Miscellaneous Information

Manual Integrations
Sample (See Below) required manual integration to ensure proper identification of one or more peaks and/or correct baseline placement consistent with the calibration standard injections.

Sample	Analyte	Value
767474003 (LS-SB-32-3.0)	Indeno(1, 2, 3-cd)pyrene	Result 12.3ug/kg

Additional Comments
The additional comments field is used to address special issues associated with each analysis, clarify method/contractual issues pertaining to the analysis, and to list any report documents generated as a result of sample analysis or review. The following additional comments were required:

Please note that there is no reportable MS/MSD data for samples 767474003 (LS-SB-32-3.0), 767474004 (LS-SB-31-1.0), 767474005 (LS-SB-08-1.0) and 767474006 (LS-SB-08-3.0) due to the parent sample being status to "Do not Use", as it was re-extracted for surrogate failure confirmation.
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2961186

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2961185

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767474002	LS-SB-32-1.0
1206406818	Method Blank (MB) **Batch 2961186**
1206406819	Laboratory Control Sample (LCS)
1206406820	767984008(LS-SB-07-3.0) Matrix Spike (MS)
1206406821	767984008(LS-SB-07-3.0) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206406819 (LCS)	Benzaldehyde	9* (21%-89%)

Spike Recovery Statement
The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206406820 (LS-SB-07-3.0MS)	Hexachlorocyclopentadiene	0* (16%-60%)
1206406821 (LS-SB-07-3.0MSD)	Hexachlorocyclopentadiene	0* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) between the MS and MSD (See Below) did not meet acceptance limits. As the individual MS and MSD recoveries were within the acceptance limits, the failures had no adverse impact on the reported sample data.

Sample	Analyte	Value
1206406820MS and 1206406821MSD (LS-SB-07-3.0)	Hexachlorobenzene	RPD 34* (0%-30%)

Technical Information

Sample Re-extraction/Re-analysis
Sample 767474002 (LS-SB-32-1.0) was re-extracted within holding due to surrogate failure. The passing re-extraction data were reported.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Metals

Product: **Determination of Metals by ICP**
Analytical Method: SW846 3050B/6010D
Analytical Procedure: GL-MA-E-013 REV# 35
Analytical Batch: 2958979

Preparation Method: SW846 3050B
Preparation Procedure: GL-MA-E-009 REV# 30
Preparation Batch: 2958977

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767474002	LS-SB-32-1.0
767474003	LS-SB-32-3.0
767474004	LS-SB-31-1.0
767474005	LS-SB-08-1.0
767474006	LS-SB-08-3.0
1206402561	Method Blank (MB)**ICP Batch 2958979**
1206402562	Laboratory Control Sample (LCS)
1206402566	767474002(LS-SB-32-1.0L) Serial Dilution (SD)
1206402563	767474002(LS-SB-32-1.0S) Matrix Spike (MS)
1206402564	767474002(LS-SB-32-1.0SD) Matrix Spike Duplicate (MSD)
1206402565	767474002(LS-SB-32-1.0PS) Post Spike (PS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1206402563 (LS-SB-32-1.0MS)	Arsenic	59.5* (75%-125%)
	Lead	158* (75%-125%)
	Magnesium	133* (75%-125%)
	Potassium	127* (75%-125%)
	Sodium	0* (75%-125%)
	Thallium	65.8* (75%-125%)
1206402564 (LS-SB-32-1.0MSD)	Antimony	141* (75%-125%)
	Copper	73.9* (75%-125%)
	Potassium	70.2* (75%-125%)

	Silver	138* (75%-125%)
	Sodium	0* (75%-125%)
	Vanadium	70.9* (75%-125%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between qualifying analyte results in the MS and MSD were not within the acceptance limits. Sample non-homogeneity and/or possible matrix interferences may be suspected.

Sample	Analyte	Value
1206402563MS and 1206402564MSD (LS-SB-32-1.0)	Antimony	RPD 35.9* (0%-20%)
	Arsenic	RPD 30.4* (0%-20%)
	Cobalt	RPD 27.5* (0%-20%)
	Lead	RPD 29* (0%-20%)
	Manganese	RPD 22.4* (0%-20%)
	Potassium	RPD 57.6* (0%-20%)
	Selenium	RPD 27.3* (0%-20%)
	Silver	RPD 20.4* (0%-20%)
	Thallium	RPD 23.5* (0%-20%)

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw values of iron and zinc within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 767474002 (LS-SB-32-1.0), 767474004 (LS-SB-31-1.0) and 767474005 (LS-SB-08-1.0).

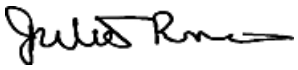
Re: Liberty Steel VCC Sampling
Work Order: 767718

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 11, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 767718 in the left-hand footer of the data report. The report has been revised to include VOC analysis for 1,4-Dioxane.



The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

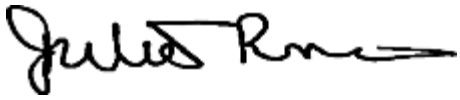
Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 767718 GEL Work Order: 767718



The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria
** Analyte is a Tracer compound
** Analyte is a surrogate compound
E Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
h Preparation or preservation holding time was exceeded

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Notes:

The Qualifiers in this report are defined as follows:

U	U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	J	Value is estimated
H	H	Analytical holding time was exceeded
h	h	Preparation or preservation holding time was exceeded
E	E	Concentration of the target analyte exceeds the instrument calibration range
Q	Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
GEL Engineering, LLC
SDG #: 767718

GC/MS Volatile

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2965810

Preparation Method: SW846 5035
Preparation Procedure: GL-OA-E-039 REV# 14
Preparation Batch: 2965809

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767718004	LS-SD-01
767718005	LS-SD-01-DP
767718006	LS-SB-04-3.0
1206415268	Laboratory Control Sample (LCS) **Batch 2965810**
1206415269	Laboratory Control Sample (LCS)
1206415270	Method Blank (MB)
1206415271	767858001(NonSDG) Matrix Spike (MS)
1206415272	767858001(NonSDG) Matrix Spike Duplicate (MSD)
1206415273	767858001(NonSDG) Matrix Spike (MS)
1206415274	767858001(NonSDG) Matrix Spike Duplicate (MSD)
1206416103	Laboratory Control Sample (LCS)
1206416104	Laboratory Control Sample (LCS)
1206416105	Method Blank (MB)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples 767718004 (LS-SD-01), 767718005 (LS-SD-01-DP) and 767718006 (LS-SB-04-3.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206415268 (LCS)	Vinyl chloride	156* (54%-142%)

Matrix Spike/Matrix Spike Duplicate Recovery Statement
The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The associated spike and/or spike duplicate passed recoveries near the lower/upper end of the limits.

Sample	Analyte	Value
1206415272 (Non SDG 767858001MSD)	Vinyl chloride	155* (32%-146%)

Technical Information

Sample Dilutions/Methanol Dilutions
Samples 1206415271 (Non SDG 767858001MS), 1206415272 (Non SDG 767858001MSD), 1206415273 (Non SDG 767858001MS) and 1206415274 (Non SDG 767858001MSD) were analyzed employing a methanol dilution extraction procedure because the sample matrices were not amenable to more concentrated analyses.

Sample Re-extraction/Re-analysis

Sample 767718004 (LS-SD-01) was re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analyses confirmed and/or passed and was reported.

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2966451

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767718001	LS-TB-031026
1206416506	Laboratory Control Sample (LCS) **Batch 2966451**
1206416507	Laboratory Control Sample (LCS)
1206416508	Method Blank (MB)
1206416509	768790001(NonSDG) Matrix Spike (MS)
1206416510	768790001(NonSDG) Matrix Spike Duplicate (MSD)
1206416511	768790004(NonSDG) Matrix Spike (MS)
1206416512	768790004(NonSDG) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for

samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206416506 (LCS)	Bromomethane	134* (70%-130%)
	Dichlorodifluoromethane	140* (70%-130%)

Matrix Spike/Matrix Spike Duplicate Recovery Statement
The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The associated spike and/or spike duplicate passed recoveries near the lower/upper end of the limits.

Sample	Analyte	Value
1206416510 (Non SDG 768790001MSD)	Trichlorofluoromethane	138* (51%-134%)

Relative Percent Difference (RPD) Statement
The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. However, the spike recoveries passed. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Sample	Analyte	Value
1206416509MS and 1206416510MSD (Non SDG 768790001)	Chloromethane	RPD 90* (0%-20%)

GC/MS Semivolatile

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2960411

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2960410

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767718002	LS-SB-04-1.0
767718003	LS-SB-04-1.0-DP
767718004	LS-SD-01
767718005	LS-SD-01-DP
767718006	LS-SB-04-3.0

767718007	LS-SB-34-1.0
1206405353	Method Blank (MB) **Batch 2960411**
1206405354	Laboratory Control Sample (LCS)
1206405355	767718006(LS-SB-04-3.0) Matrix Spike (MS)
1206405356	767718006(LS-SB-04-3.0) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206405354 (LCS)	2, 4-Dimethylphenol	27* (32%-74%)
	Benzaldehyde	8* (21%-89%)
	Diethylphthalate	51* (52%-123%)
	Hexachlorocyclopentadiene	16* (26%-82%)
	m-Nitroaniline	30* (41%-108%)

Spike Recovery Statement
The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206405355 (LS-SB-04-3.0MS)	Benzaldehyde	10* (12%-103%)
	Hexachlorocyclopentadiene	0* (16%-60%)
1206405356 (LS-SB-04-3.0MSD)	Hexachlorocyclopentadiene	0* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries which attributed to the RPD failures. The data were reported.

Sample	Analyte	Value
1206405355MS and 1206405356MSD (LS-SB-04-3.0)	2-Methyl-4, 6-dinitrophenol	41* (0%-30%)

Technical Information

Sample Dilutions
Sample 767718004 (LS-SD-01) was diluted because the extract was very dark and/or viscous. The data from the

dilution were reported.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

GC Semivolatile Pesticide

Product: **Organochlorine Pesticides and Chlorinated Hydrocarbons**
Analytical Method: SW846 3541/8081B
Analytical Procedure: GL-OA-E-041 REV# 25
Analytical Batch: 2960428

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2960427

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767718002	LS-SB-04-1.0
767718003	LS-SB-04-1.0-DP
767718006	LS-SB-04-3.0

1206405383	Laboratory Control Sample (LCS)
1206405384	767718002(LS-SB-04-1.0) Matrix Spike (MS)
1206405385	767718002(LS-SB-04-1.0) Matrix Spike Duplicate (MSD)
1206405386	Laboratory Control Sample (LCS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Florisil
Florisil clean-up was not performed on samples in this batch.

GC Semivolatile PCB

Product: **Analysis of The Analysis of Polychlorinated Biphenyls by GC/ECD by ECD**
Analytical Method: SW846 3541/8082A
Analytical Procedure: GL-OA-E-040 REV# 30
Analytical Batch: 2960517

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2960515

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767718002	LS-SB-04-1.0
767718003	LS-SB-04-1.0-DP
767718006	LS-SB-04-3.0
1206405637	Method Blank (MB) **Batch 2960517**
1206405638	Laboratory Control Sample (LCS)
1206405639	767718002(LS-SB-04-1.0) Matrix Spike (MS)
1206405640	767718002(LS-SB-04-1.0) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Preparation/Analytical Method Verification
Samples and the associated QC samples in this batch were cleaned using alumina in order to remove oil and other high molecular weight interferences.
Samples and QC in this batch were cleaned with activated copper in order to remove sulfur.

All reported analyte detections in client and quality control samples were within the established retention time windows. Reported analyte concentrations were confirmed on dissimilar columns.

Sample Dilutions

Samples 1206405639 (LS-SB-04-1.0MS), 1206405640 (LS-SB-04-1.0MSD) and 767718002 (LS-SB-04-1.0) were diluted due to high level of non-target analytes within the retention time window of interest.

Miscellaneous Information

Manual integrations
Samples 1206405639 (LS-SB-04-1.0MS), 1206405640 (LS-SB-04-1.0MSD), 767718002 (LS-SB-04-1.0), 767718003 (LS-SB-04-1.0-DP) and 767718006 (LS-SB-04-3.0) required manual integration to correctly position the baseline as set in the calibration standard injections.

Metals

1206404419	767718002(LS-SB-04-1.0S) Matrix Spike (MS)
1206404420	767718002(LS-SB-04-1.0SD) Matrix Spike Duplicate (MSD)
1206404421	767718002(LS-SB-04-1.0PS) Post Spike (PS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CRDL/PQL Requirements
The PQL standard recoveries for SW846 6010C or 6010D met the control limits with the exception of arsenic. Client sample concentrations were less than the MDL or greater than two times the PQL; therefore the data were not adversely affected. 767718004 (LS-SD-01).

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1206404419 (LS-SB-04-1.0MS)	Calcium	-43.3* (75%-125%)
1206404420 (LS-SB-04-1.0MSD)	Calcium	-84.8* (75%-125%)

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will

dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw iron and manganese values within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 767718004 (LS-SD-01), 767718005 (LS-SD-01-DP) and 767718007 (LS-SB-34-1.0).

1206405876	760687007(NonSDGSD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology. Holding time is measured by comparison of the date and time of sample collection to the date and time of sample preparation and analysis. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. Samples (See Below) were initially analyzed within holding; however, the holding times had expired prior to reanalysis of samples.

Sample	Analyte	Value
1206405875 (Non SDG 760687007MS)	Mercury	Received 19-JAN-26, within holding, analyzed 13-MAR-26, out of holding 12-FEB-26
	Mercury	Received 19-JAN-26, within holding, prepped 12-MAR-26, out of holding 12-FEB-26
1206405876 (Non SDG 760687007MSD)	Mercury	Received 19-JAN-26, within holding, analyzed 13-MAR-26, out of holding 12-FEB-26
	Mercury	Received 19-JAN-26, within holding, prepped 12-MAR-26, out of holding 12-FEB-26

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 1206405875 (Non SDG 760687007MS) and 1206405876 (Non SDG 760687007MSD) in this SDG were diluted 20x due to the tissue/fish matrix. The matrix forms an emulsion that clogs the liquid/air separator membrane causing instrument failure.

General Chemistry

Product: **Cyanide, Total**
Analytical Method: SW846 9012B
Analytical Procedure: GL-GC-E-112 REV# 3
Analytical Batch: 2960702

Preparation Method: SW846 9010C Distillation
Preparation Procedure: GL-GC-E-067 REV# 26

Preparation Batch: 2960701

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767718002	LS-SB-04-1.0
767718003	LS-SB-04-1.0-DP

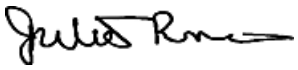
Re: Liberty Steel VCC Sampling
Work Order: 767984

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 12, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 767984 in the left-hand footer of the data report. The report has been revised to include VOC analysis for 1,4-Dioxane.



The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

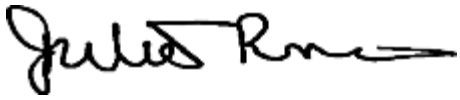
Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 767984 GEL Work Order: 767984



The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria
** Analyte is a Tracer compound
** Analyte is a surrogate compound
H Analytical holding time was exceeded
J Value is estimated
Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
h Preparation or preservation holding time was exceeded

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Notes:

The Qualifiers in this report are defined as follows:

- U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J J Value is estimated
- H H Analytical holding time was exceeded
- h h Preparation or preservation holding time was exceeded
- Q Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

QC Summary

Workorder: **767984**

Parmname	NOM	Sample	Qual	QC	Units	RPD/D%	REC%	Range	Anlst	Date	Time

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
GEL Engineering, LLC
SDG #: 767984

GC/MS Volatile

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2966465

Preparation Method: SW846 5035
Preparation Procedure: GL-OA-E-039 REV# 14
Preparation Batch: 2966464

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767984004	LS-SB-42-3.0
767984006	LS-SB-41-3.0
767984008	LS-SB-07-3.0
1206416540	Laboratory Control Sample (LCS) **Batch 2966465**
1206416541	Laboratory Control Sample (LCS)
1206416542	Method Blank (MB)
1206416543	768173001(NonSDG) Matrix Spike (MS)
1206416544	768173001(NonSDG) Matrix Spike Duplicate (MSD)
1206416623	768173001(NonSDG) Matrix Spike (MS)
1206416624	768173001(NonSDG) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples 767984004 (LS-SB-42-3.0), 767984006 (LS-SB-41-3.0) and 767984008 (LS-SB-07-3.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Matrix Spike/Matrix Spike Duplicate Recovery Statement
The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The recoveries were similar. It is believed possible matrix interference has been demonstrated.

Sample	Analyte	Value
1206416543 (Non SDG 768173001MS)	1, 2, 3-Trichlorobenzene	8* (30%-133%)

	1, 2, 4-Trichlorobenzene	8* (29%-139%)
1206416544 (Non SDG 768173001MSD)	1, 2, 3-Trichlorobenzene	7* (30%-133%)
	1, 2, 4-Trichlorobenzene	7* (29%-139%)

The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The associated spike and/or spike duplicate passed recoveries near the lower/upper end of the limits.

Sample	Analyte	Value
1206416544 (Non SDG 768173001MSD)	Methylcyclohexane	21* (27%-137%)

Relative Percent Difference (RPD) Statement
The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Sample	Analyte	Value
1206416543MS and 1206416544MSD (Non SDG 768173001)	Methylcyclohexane	RPD 29* (0%-20%)

The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. However, the spike recoveries passed. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Sample	Analyte	Value
1206416543MS and 1206416544MSD (Non SDG 768173001)	Methyl acetate	RPD 24* (0%-20%)

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2967250

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767984001	LS-TB-031126
1206417827	Laboratory Control Sample (LCS) **Batch 2967250**
1206417828	Laboratory Control Sample (LCS)
1206417829	Method Blank (MB)
1206417830	769194001(NonSDG) Matrix Spike (MS)
1206417831	769194001(NonSDG) Matrix Spike Duplicate (MSD)
1206417832	769194001(NonSDG) Matrix Spike (MS)
1206417833	769194001(NonSDG) Matrix Spike Duplicate (MSD)
1206419148	Laboratory Control Sample (LCS)
1206419149	Laboratory Control Sample (LCS)
1206419150	Method Blank (MB)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206419148 (LCS)	1, 1, 2, 2-Tetrachloroethane	133* (70%-130%)

The LCS recoveries for 1,4-Dioxane were not within the acceptance limits. The data are reported at the client's request.

Sample	Analyte	Value
1206417828 (LCS)	1, 4-Dioxane	69* (70%-130%)
1206419149 (LCS)	1, 4-Dioxane	60* (70%-130%)

GC/MS Semivolatile

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2961186

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2961185

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767984002	LS-SB-35-1.0
767984003	LS-SB-42-1.0
767984004	LS-SB-42-3.0
767984005	LS-SB-41-1.0

767984006	LS-SB-41-3.0
767984007	LS-SB-07-1.0
767984008	LS-SB-07-3.0
1206406818	Method Blank (MB) **Batch 2961186**
1206406819	Laboratory Control Sample (LCS)
1206406820	767984008(LS-SB-07-3.0) Matrix Spike (MS)
1206406821	767984008(LS-SB-07-3.0) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206406819 (LCS)	Benzaldehyde	9* (21%-89%)

Spike Recovery Statement
The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206406820 (LS-SB-07-3.0MS)	Hexachlorocyclopentadiene	0* (16%-60%)
1206406821 (LS-SB-07-3.0MSD)	Hexachlorocyclopentadiene	0* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) between the MS and MSD (See Below) did not meet acceptance limits. As the individual MS and MSD recoveries were within the acceptance limits, the failures had no adverse impact on the reported sample data.

Sample	Analyte	Value
1206406820MS and 1206406821MSD (LS-SB-07-3.0)	Hexachlorobenzene	RPD 34* (0%-30%)

Miscellaneous Information

Manual Integrations
Sample (See Below) required manual integration to ensure proper identification of one or more peaks and/or correct baseline placement consistent with the calibration standard injections.

Sample	Analyte	Value
767984008 (LS-SB-07-3.0)	2, 4-Dimethylphenol	Result 364ug/kg

	Dibenzo(a, h)anthracene	Result 15.4ug/kg

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Metals

Product: **Determination of Metals by ICP**
Analytical Method: SW846 3050B/6010D
Analytical Procedure: GL-MA-E-013 REV# 35
Analytical Batch: 2960606

Preparation Method: SW846 3050B
Preparation Procedure: GL-MA-E-009 REV# 30
Preparation Batch: 2960605

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767984002	LS-SB-35-1.0
767984003	LS-SB-42-1.0
767984004	LS-SB-42-3.0
767984005	LS-SB-41-1.0
767984006	LS-SB-41-3.0
767984007	LS-SB-07-1.0
767984008	LS-SB-07-3.0
1206405827	Method Blank (MB)**ICP Batch 2960606**
1206405828	Laboratory Control Sample (LCS)
1206405832	767984002(LS-SB-35-1.0L) Serial Dilution (SD)
1206405829	767984002(LS-SB-35-1.0S) Matrix Spike (MS)
1206405830	767984002(LS-SB-35-1.0SD) Matrix Spike Duplicate (MSD)
1206405831	767984002(LS-SB-35-1.0PS) Post Spike (PS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike

digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1206405829 (LS-SB-35-1.0MS)	Lead	169* (75%-125%)
	Nickel	45.1* (75%-125%)
	Vanadium	70.5* (75%-125%)
1206405830 (LS-SB-35-1.0MSD)	Lead	197* (75%-125%)
	Nickel	15* (75%-125%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between qualifying analyte results in the MS and MSD were not within the acceptance limits. Sample non-homogeneity and/or possible matrix interferences may be suspected.

Sample	Analyte	Value
1206405829MS and 1206405830MSD (LS-SB-35-1.0)	Cadmium	RPD 20.2* (0%-20%)
	Calcium	RPD 32.8* (0%-20%)

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw values of iron, manganese, calcium, and zinc within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 767984002 (LS-SB-35-1.0), 767984003 (LS-SB-42-1.0), 767984004 (LS-SB-42-3.0), 767984005 (LS-SB-41-1.0) and 767984007 (LS-SB-07-1.0).

Product: **Mercury Analysis Using the Perkin Elmer Automated Mercury Analyzer**
Analytical Method: SW846 7471B
Analytical Procedure: GL-MA-E-010 REV# 42
Analytical Batch: 2960527

Preparation Method: SW846 7471B Prep
Preparation Procedure: GL-MA-E-010 REV# 42
Preparation Batch: 2960526

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767984002	LS-SB-35-1.0
767984003	LS-SB-42-1.0
767984004	LS-SB-42-3.0
767984005	LS-SB-41-1.0
767984006	LS-SB-41-3.0
767984007	LS-SB-07-1.0
767984008	LS-SB-07-3.0
1206405653	Method Blank (MB)**CVAA Batch 2960527**
1206405654	Laboratory Control Sample (LCS)
1206405875	760687007(NonSDGS) Matrix Spike (MS)
1206405876	760687007(NonSDGSD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology. Holding time is measured by comparison of the date and time of sample collection to the date and time of sample preparation and analysis. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. Samples (See Below) were initially analyzed within holding; however, the holding times had expired prior to reanalysis of samples.

Sample	Analyte	Value
1206405875 (Non SDG 760687007MS)	Mercury	Received 19-JAN-26, within holding, analyzed 13-MAR-26, out of holding 12-FEB-26
	Mercury	Received 19-JAN-26, within holding, prepped 12-MAR-26, out of holding 12-FEB-26
1206405876 (Non SDG 760687007MSD)	Mercury	Received 19-JAN-26, within holding, analyzed 13-MAR-26, out of holding 12-FEB-26
	Mercury	Received 19-JAN-26, within holding, prepped 12-MAR-26, out of holding 12-FEB-26

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 1206405875 (Non SDG 760687007MS) and 1206405876 (Non SDG 760687007MSD) in this SDG were diluted 20x due to the tissue/fish matrix. The matrix forms an emulsion that clogs the liquid/air separator membrane causing instrument failure.

General Chemistry

Product: **Hexavalent Chromium**
Analytical Method: SW846 7196A
Analytical Procedure: GL-GC-E-044 REV# 29
Analytical Batch: 2962940

Preparation Method: SW846 3060A
Preparation Procedure: GL-GC-E-044 REV# 29
Preparation Batch: 2962939

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767984002	LS-SB-35-1.0
767984003	LS-SB-42-1.0
767984004	LS-SB-42-3.0
767984005	LS-SB-41-1.0
767984006	LS-SB-41-3.0
767984007	LS-SB-07-1.0
767984008	LS-SB-07-3.0
1206410018	Method Blank (MB) **Batch 2962940**
1206410019	Laboratory Control Sample (LCS)
1206410022	767984004(LS-SB-42-3.0) Sample Duplicate (DUP)
1206410023	767984004(LS-SB-42-3.0) Matrix Spike (MS)
1206410024	Insoluble Lab Control Sample (ILCS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

Radiochemistry

Product: **Dry Weight**
Preparation Method: ASTM D 2216 (Modified)
Preparation Procedure: GL-OA-E-020 REV# 14
Preparation Batch: 2960588

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
767984002	LS-SB-35-1.0
767984003	LS-SB-42-1.0
767984004	LS-SB-42-3.0
767984005	LS-SB-41-1.0
767984006	LS-SB-41-3.0
767984007	LS-SB-07-1.0
767984008	LS-SB-07-3.0
1206405806	767984002(LS-SB-35-1.0) Sample Duplicate (DUP) **Batch 2960588**

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

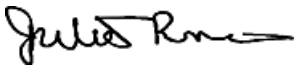
Re: Liberty Steel VCC Sampling
Work Order: 768430

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 13, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 768430 in the left-hand footer of the data report. The report has been revised to include VOC analysis for 1,4-Dioxane.



The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. Collection time between COC and container do not match for sample 768430005. Client was contacted and lab will use COC collection time*768430005(LS-SB-39-1.0 DP)*.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

Purchase Order: GELP25-1271

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 768430 GEL Work Order: 768430

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

E Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

**Toluene-d8	50.0		57.0		59.0	ug/L		118	(79%-122%)			

Notes:

The Qualifiers in this report are defined as follows:

U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

J J Value is estimated

E E Concentration of the target analyte exceeds the instrument calibration range

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
GEL Engineering, LLC
SDG #: 768430

GC/MS Volatile

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2967250

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
768430001	LS-TB-031326
1206417830	769194001(NonSDG) Matrix Spike (MS) **Batch 2967250**
1206417831	769194001(NonSDG) Matrix Spike Duplicate (MSD)
1206417832	769194001(NonSDG) Matrix Spike (MS)
1206417833	769194001(NonSDG) Matrix Spike Duplicate (MSD)
1206419148	Laboratory Control Sample (LCS)
1206419149	Laboratory Control Sample (LCS)
1206419150	Method Blank (MB)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206419148 (LCS)	1, 1, 2, 2-Tetrachloroethane	133* (70%-130%)

The LCS recoveries for 1,4-Dioxane were not within the acceptance limits. The data are reported at the client's request.

Sample	Analyte	Value

1206419149 (LCS)	1, 4-Dioxane	60* (70%-130%)

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2968103

Preparation Method: SW846 5035
Preparation Procedure: GL-OA-E-039 REV# 14
Preparation Batch: 2968092

The following samples were analyzed using the above methods and analytical procedure(s).

1206420096	Laboratory Control Sample (LCS)
1206420097	Laboratory Control Sample (LCS)
1206420098	Method Blank (MB)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples 768430003 (LS-SB-03-3.0), 768430007 (LS-SB-23-3.0), 768430010 (LS-SB-24-3.0), 768430012 (LS-SB-06-4.0), 768430014 (LS-SB-16-3.0) and 768430016 (LS-SB-05-3.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Relative Percent Difference (RPD) Statement

The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. However, the spike recoveries passed. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Sample	Analyte	Value
1206419282MS and 1206419283MSD (Non SDG 768703002)	1, 2, 3-Trichlorobenzene	RPD 35* (0%-20%)
	1, 2-Dibromo-3-chloropropane	RPD 23* (0%-20%)
	Chloroethane	RPD 22* (0%-20%)

Technical Information

Sample Dilutions/Methanol Dilutions

Samples 768430012 (LS-SB-06-4.0) and 768430016 (LS-SB-05-3.0) were diluted due to the presence of non-target analytes and/or excessive hydrocarbon matrix interference.

Analyte	768430	
	012	016
Several	50X	50X

Sample Re-extraction/Re-analysis
Samples 768430012 (LS-SB-06-4.0) and 768430016 (LS-SB-05-3.0) were re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analyses confirmed and/or passed and were reported.

Sample 768430014 (LS-SB-16-3.0) was re-analyzed and reported due to possible carry-over from a previously analyzed sample.

GC/MS Semivolatile

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2961936

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2961935

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Spike Recovery Statement
The MS and MSD (See Below) did not meet spike recovery acceptance criteria. There were multiple target analytes detected above the reporting limits in the parent sample. The sample chromatograms displayed severe matrix interference. The failures were attributed to matrix interference and the data were reported.

Sample	Analyte	Value
1206408341 (LS-SB-03-1.0MS)	2, 4-Dinitrophenol	17* (19%-117%)
	Benzo(a)anthracene	212* (16%-120%)
	Benzo(a)pyrene	199* (16%-119%)
	Benzo(b)fluoranthene	288* (16%-123%)
	Benzo(ghi)perylene	132* (15%-127%)
	Benzo(k)fluoranthene	145* (16%-126%)
	Chrysene	293* (17%-119%)
	Hexachlorocyclopentadiene	0* (16%-60%)
	Indeno(1, 2, 3-cd)pyrene	162* (14%-125%)
1206408342 (LS-SB-03-1.0MSD)	Hexachlorocyclopentadiene	6* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) for the MS and MSD, (See Below), were not within the acceptance limits. The failures were attributed to matrix interference. The data were reported.

Sample	Analyte	Value

1206408341MS and 1206408342MSD (LS-SB-03-1.0)	2, 3, 4, 6-Tetrachlorophenol, 2, 4-Dimethylphenol	33* (0%-30%)
	2-Chloronaphthalene, 4-Chloro-3-methylphenol	31* (0%-30%)
	4-Nitrophenol	32* (0%-30%)
	Benzaldehyde	42* (0%-30%)
	Benzo(a)anthracene	77* (0%-30%)
	Benzo(a)pyrene	74* (0%-30%)
	Benzo(b)fluoranthene	90* (0%-30%)
	Benzo(ghi)perylene	34* (0%-30%)
	Benzo(k)fluoranthene	47* (0%-30%)
	Chrysene	100* (0%-30%)
	Hexachlorobutadiene	31* (0%-30%)
	Hexachlorocyclopentadiene	200* (0%-30%)
	Indeno(1, 2, 3-cd)pyrene	52* (0%-30%)
	Nitrobenzene	31* (0%-30%)
	Pentachlorophenol	34* (0%-30%)
	bis(2-Chloroethoxy)methane, o-Nitroaniline and p-Nitroaniline	32* (0%-30%)

Technical Information

Sample Dilutions
Samples 768430012 (LS-SB-06-4.0), 768430015 (LS-SB-05-1.0) and 768430016 (LS-SB-05-3.0) were diluted due to the presence of non-target analyte matrix. The data from the dilutions were reported.
Samples 768430012 (LS-SB-06-4.0), 768430015 (LS-SB-05-1.0) and 768430016 (LS-SB-05-3.0) were diluted due to the presence of one or more target analytes at concentrations exceeding the established calibration range.

Sample Re-extraction/Re-analysis
Samples 768430002 (LS-SB-03-1.0) and 768430015 (LS-SB-05-1.0) were re-analyzed due to the possibility of carryover from the previous injection. Data were reported from the re-analysis.
Samples 1206408339 (MB) and 1206408340 (LCS) were re-analyzed due CCVs missing from the initial sequence, as one sample in the batch required all CCVs to be analyzed. Data were reported from the re-analysis.

Miscellaneous Information

Manual Integrations
Sample (See Below) required manual integration to ensure proper identification of one or more peaks and/or correct baseline placement consistent with the calibration standard injections.

Sample	Analyte	Value
768430015 (LS-SB-05-1.0)	Fluorene	Result 2870ug/kg

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

GC Semivolatile Pesticide

Product: **Organochlorine Pesticides and Chlorinated Hydrocarbons**
Analytical Method: SW846 3541/8081B
Analytical Procedure: GL-OA-E-041 REV# 25
Analytical Batch: 2963510

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2963508

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
768430013	LS-SB-16-1.0
768430014	LS-SB-16-3.0
1206410865	Method Blank (MB) **Batch 2963510**
1206410866	Laboratory Control Sample (LCS)
1206410867	768430013(LS-SB-16-1.0) Matrix Spike (MS)
1206410868	768430013(LS-SB-16-1.0) Matrix Spike Duplicate (MSD)
1206410869	Laboratory Control Sample (LCS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Preparation/Analytical Method Verification
Samples and the associated QC in this batch were cleaned with activated copper in order to remove sulfur.

Florisil
Florisil clean-up was not performed on samples in this batch.

GC Semivolatile PCB

Product: **Analysis of The Analysis of Polychlorinated Biphenyls by GC/ECD by ECD**
Analytical Method: SW846 3541/8082A
Analytical Procedure: GL-OA-E-040 REV# 30
Analytical Batch: 2968579

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2968578

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
768430013	LS-SB-16-1.0
768430014	LS-SB-16-3.0
1206419896	Method Blank (MB) **Batch 2968579**
1206419897	Laboratory Control Sample (LCS)
1206419898	Laboratory Control Sample Duplicate (LCSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCSD)
An LCSD was used in place of matrix QC due to limited sample volume.

Technical Information

Preparation/Analytical Method Verification

All reported analyte detections in client and quality control samples were within the established retention time windows. Reported analyte concentrations were confirmed on dissimilar columns.

Miscellaneous Information

Manual integrations
Samples (See Below) required manual integration to correctly position the baseline as set in the calibration standard injections.

Sample	Analyte	Value
768430013 (LS-SB-16-1.0)	Aroclor-1260	Result 4.94ug/kg
	Decachlorobiphenyl	Result 3.86ug/kg
768430014 (LS-SB-16-3.0)	Aroclor-1260	Result 3.91ug/kg

Metals

Product: **Determination of Metals by ICP**
Analytical Method: SW846 3050B/6010D
Analytical Procedure: GL-MA-E-013 REV# 35
Analytical Batch: 2961773

Preparation Method: SW846 3050B
Preparation Procedure: GL-MA-E-009 REV# 30
Preparation Batch: 2961772

1206407935	768430002(LS-SB-03-1.0SD) Matrix Spike Duplicate (MSD)
1206407936	768430002(LS-SB-03-1.0PS) Post Spike (PS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1206407934 (LS-SB-03-1.0MS)	Lead	228* (75%-125%)
	Magnesium	149* (75%-125%)
	Zinc	221* (75%-125%)
1206407935 (LS-SB-03-1.0MSD)	Barium	155* (75%-125%)
	Copper	191* (75%-125%)
	Lead	286* (75%-125%)
	Magnesium	153* (75%-125%)
	Zinc	309* (75%-125%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between qualifying analyte results in the MS and MSD were not within the acceptance limits. Sample non-homogeneity and/or possible matrix interferences may be suspected.

Sample	Analyte	Value
1206407934MS and 1206407935MSD (LS-SB-03-1.0)	Barium	RPD 21.2* (0%-20%)
	Calcium	RPD 23.6* (0%-20%)
	Copper	RPD 29.2* (0%-20%)
	Manganese	RPD 43.8* (0%-20%)

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw values of calcium, iron, and manganese within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. Samples required dilutions in order to minimize suppression of lead due to matrix interferences. 768430004 (LS-SB-39-1.0), 768430005 (LS-SB-39-1.0 DP), 768430006 (LS-SB-23-1.0), 768430008 (LS-SB-22-1.0), 768430009 (LS-SB-24-1.0) and 768430010 (LS-SB-24-3.0).

Re: Liberty Steel VCC Sampling
Work Order: 769001

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 18, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 769001 in the left-hand footer of the data report. This report was revised to remove 1,4-Dioxane from the EPA Method 8270 SVOC analytical suite.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 769001 GEL Work Order: 769001

The Qualifiers in this report are defined as follows:

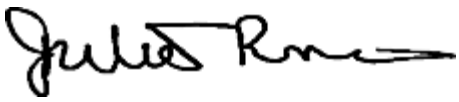
* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

E Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated



P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, the difference is >70%.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Notes:

The Qualifiers in this report are defined as follows:

U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

QC Summary

Workorder: **769001**

Parmname	NOM	Sample	Qual	QC	Units	RPD/D%	REC%	Range	Anlst	Date	Time

J	J	Value is estimated
P	P	Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, the difference is >70%.
E	E	Concentration of the target analyte exceeds the instrument calibration range

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
GEL Engineering, LLC
SDG #: 769001

GC/MS Volatile

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2970065

Preparation Method: SW846 5035
Preparation Procedure: GL-OA-E-039 REV# 14
Preparation Batch: 2970064

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769001003	LS-SB-20-4.0
769001005	LS-SB-15-4.0
769001006	LS-SB-15-4.0-DP
769001008	LS-SB-25-4.0
769001010	LS-SB-40-3.0
769001012	LS-SB-01-5.0
769001015	LS-SB-14-3.0
769001016	LS-SB-14-3.0-DP
769001018	LS-SB-02-4.0
1206422818	Laboratory Control Sample (LCS) **Batch 2970065**
1206422819	Laboratory Control Sample Duplicate (LCSD)
1206422820	Laboratory Control Sample (LCS)
1206422821	Laboratory Control Sample Duplicate (LCSD)
1206422822	Method Blank (MB)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample Duplicate (LCSD)
An LCS/LCSD pair were analyzed in order to demonstrate precision and accuracy.

Technical Information

Sample Re-extraction/Re-analysis
Sample 769001003 (LS-SB-20-4.0) was re-analyzed and reported due to possible carry-over from a previously analyzed sample.

Miscellaneous Information

Manual Integrations
Manual integrations were performed on client sample chromatograms (See Below) because the sample matrices affected the ability of the software to draw appropriate peak baselines.

Sample	Analyte	Value
769001012 (LS-SB-01-5.0)	Bromofluorobenzene	Result 43ug/kg

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2970509

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769001001	LS-TB-031726
1206423698	Laboratory Control Sample (LCS) **Batch 2970509**
1206423699	Laboratory Control Sample Duplicate (LCSD)
1206423700	Method Blank (MB)
1206423713	Laboratory Control Sample (LCS)
1206423714	Laboratory Control Sample Duplicate (LCSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample Duplicate (LCSD)
An LCS/LCSD pair were analyzed in order to demonstrate precision and accuracy.

GC/MS Semivolatile

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2964568

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2964565

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification

1206412895	769001002(LS-SB-20-1.0) Matrix Spike (MS)
1206412896	769001002(LS-SB-20-1.0) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206412894 (LCS)	Benzaldehyde	13* (21%-89%)

Spike Recovery Statement
The MS and/or MSD (See Below) spike recoveries were not within the acceptance limits. The associated MS or MSD passed recoveries, as did the LCS. It appears that the low spike recoveries were isolated to the MS or MSD only and were the result of a poor extraction.

Sample	Analyte	Value
1206412896 (LS-SB-20-1.0MSD)	Phenol	0* (16%-107%)

The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value

1206412896 (LS-SB-20-1.0MSD)	4-Nitrophenol	0* (14%-122%)
	Hexachlorocyclopentadiene	10* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) between the MS and MSD (See Below) did not meet acceptance limits. As the individual MS and MSD recoveries were within the acceptance limits, the failures had no adverse impact on the reported sample data.

Sample	Analyte	Value
1206412895MS and 1206412896MSD (LS-SB-20-1.0)	1, 1'-Biphenyl	RPD 35* (0%-30%)
	1, 2, 4, 5-Tetrachlorobenzene	RPD 37* (0%-30%)
	2, 3, 4, 6-Tetrachlorophenol	RPD 36* (0%-30%)
	2, 4, 5-Trichlorophenol	RPD 34* (0%-30%)
	2, 4, 6-Trichlorophenol	RPD 36* (0%-30%)
	2, 4-Dichlorophenol	RPD 35* (0%-30%)
	2, 4-Dimethylphenol	RPD 32* (0%-30%)
	2, 4-Dinitrotoluene	RPD 40* (0%-30%)
	2, 6-Dinitrotoluene	RPD 39* (0%-30%)
	2-Chloronaphthalene	RPD 36* (0%-30%)

	Phenanthrene, Pyrene	RPD 33* (0%-30%)
	bis(2-Chloro-1-methylethyl)ether	RPD 36* (0%-30%)
	bis(2-Chloroethoxy)methane	RPD 37* (0%-30%)
	bis(2-Chloroethyl) ether	RPD 32* (0%-30%)
	bis(2-Ethylhexyl)phthalate	RPD 34* (0%-30%)
	m, p-Cresols	RPD 32* (0%-30%)
	o-Cresol	RPD 34* (0%-30%)
	o-Nitroaniline	RPD 39* (0%-30%)
	p-Nitroaniline	RPD 34* (0%-30%)

The RPD values between the MS and MSD, (See Below), were not within the acceptance limits due to the large difference between the individual recoveries in each MS and MSD analyte pair. The failures may be attributed to an error in the extraction process.

Sample	Analyte	Value
1206412895MS and 1206412896MSD (LS-SB-20-1.0)	Phenol	RPD 200* (0%-30%)

The RPD values between the MS and MSD, (See Below), were not within the acceptance limits. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries which attributed to the RPD failures. The data were reported.

Sample	Analyte	Value
1206412895MS and 1206412896MSD (LS-SB-20-1.0)	4-Nitrophenol	RPD 200* (0%-30%)
	Hexachlorocyclopentadiene	RPD 85* (0%-30%)

Technical Information

Sample Re-extraction/Re-analysis

Sample 769001009 (LS-SB-40-2.0) was re-extracted within holding due to surrogate failure. The re-extraction displayed similar low surrogate failures and confirmed the detections of target analytes detected in the initial extraction. As the re-extraction displayed higher recoveries, although with still a failure than the initial extraction, the re-extracted data were reported.

Miscellaneous Information

Manual Integrations

Sample (See Below) required manual integration to ensure proper identification of one or more peaks and/or correct baseline placement consistent with the calibration standard injections.

Sample	Analyte	Value
769001007 (LS-SB-25-3.0)	2-Fluorophenol	Result 737ug/kg

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2966002

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2966001

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769001009	LS-SB-40-2.0
1206415630	Method Blank (MB) **Batch 2966002**
1206415631	Laboratory Control Sample (LCS)
1206415991	Laboratory Control Sample Duplicate (LCSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Surrogate Recoveries
Sample (See Below) did not meet surrogate recovery acceptance criteria. The sample was re-extracted within holding and displayed similar low surrogate failures. The re-extraction confirmed the detections of target analytes detected in the initial extraction. As the re-extraction displayed higher recoveries, although with still a failure, than the initial extraction, the re-extracted data were reported.

Sample	Analyte	Value
769001009 (LS-SB-40-2.0)	2, 4, 6-Tribromophenol	18* (20%-104%)

Laboratory Control Sample Duplicate (LCSD)
An LCSD was used in place of matrix QC due to limited sample volume.

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206415631 (LCS)	2-Methyl-4, 6-dinitrophenol	9* (21%-106%)
	Hexachlorocyclopentadiene	0* (26%-82%)

1206419904 768521001(NonSDG) Matrix Spike (MS)
1206419905 768521001(NonSDG) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Preparation/Analytical Method Verification
Samples and the associated QC samples in this batch were cleaned using alumina in order to remove oil and other high molecular weight interferences.
Samples and QC in this batch were cleaned with activated copper in order to remove sulfur.

All reported analyte detections in client and quality control samples were within the established retention time windows. Reported analyte concentrations were confirmed on dissimilar columns.

Sample Dilutions
Sample 769001007 (LS-SB-25-3.0) was diluted due to high concentration of target analyte in the sample.

Miscellaneous Information

Manual integrations
Samples (See Below) required manual integration to correctly position the baseline as set in the calibration standard injections.

Sample	Analyte	Value
1206419903 (LCS)	Aroclor-1016	Result 25.4ug/kg
	Aroclor-1260	Result 28.6ug/kg

1206412122	769001002(LS-SB-20-1.0PS) Post Spike (PS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1206412120 (LS-SB-20-1.0MS)	Copper	71.7* (75%-125%)
	Zinc	50.5* (75%-125%)
1206412121 (LS-SB-20-1.0MSD)	Chromium	127* (75%-125%)
	Copper	162* (75%-125%)
	Zinc	183* (75%-125%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between qualifying analyte results in the MS and MSD were not within the acceptance limits. Sample non-homogeneity and/or possible matrix interferences may be suspected.

Sample	Analyte	Value
1206412120MS and 1206412121MSD (LS-SB-20-1.0)	Chromium	RPD 32.9* (0%-20%)
	Copper	RPD 47.7* (0%-20%)
	Iron	RPD 81.3* (0%-20%)
	Lead	RPD 23.1* (0%-20%)
	Manganese	RPD 76.1* (0%-20%)
	Nickel	RPD 20.7* (0%-20%)
	Zinc	RPD 55.2* (0%-20%)

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw values of iron and manganese within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 769001007 (LS-SB-25-3.0), 769001008 (LS-SB-25-4.0), 769001009 (LS-SB-40-2.0) and 769001017 (LS-SB-02-2.0).

1206421791	769063001(NonSDG) Matrix Spike (MS)
1206421794	Insoluble Lab Control Sample (ILCS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement
The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Hexavalent Chromium	1206421791 (Non SDG 769063001MS)	68.9* (75%-125%)

Radiochemistry

Product: **Dry Weight**
Preparation Method: ASTM D 2216 (Modified)
Preparation Procedure: GL-OA-E-020 REV# 14
Preparation Batch: 2964235

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769001002	LS-SB-20-1.0
769001003	LS-SB-20-4.0

Re: Groundwater and Surface Water Sampling
Work Order: 769624

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 24, 2026. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Caitlyn Mettetal for
Julie Robinson
Project Manager

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 769624 GEL Work Order: 769624

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B The target analyte was detected in the associated blank.

E Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated

P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, the difference is >70%.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Parameter	Qualifier	Result	Uncertainty	MDC	TPU	RL	Units	PF	DF	Analyst	Date	Time	Batch	Mtd.
Gravimetric Solids														
"As Received"														

The following Analytical Methods were performed

Method	Description
1	ASTM D 2216 (Modified)

Surrogate/Tracer Recovery	Test	Batch ID	Recovery%	Acceptable Limits

Notes:

The MDC is a sample specific MDC.
TPU and Counting Uncertainty are calculated at the 95% confidence level (1.96-sigma).

Column headers are defined as follows:

DF: Dilution Factor
DL: Detection Limit
Lc/LC: Critical Level
MDA: Minimum Detectable Activity
MDC: Minimum Detectable Concentration
Mtd.: Method
PF: Prep Factor
RL: Reporting Limit
TPU: Total Propagated Uncertainty

Notes:

The Qualifiers in this report are defined as follows:

- U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J J Value is estimated
- B B The target analyte was detected in the associated blank.
- P P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, the difference is >70%.
- E E Concentration of the target analyte exceeds the instrument calibration range

QC Summary

Workorder: **769624**

Parmname	NOM	Sample	Qual	QC	Units	RPD/D%	REC%	Range	Anlst	Date	Time

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

Notes:

TPU and Counting Uncertainty are calculated at the 95% confidence level (1.96-sigma).

The Qualifiers in this report are defined as follows:

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
** Indicates analyte is a surrogate/tracer compound.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptence criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
GEL Engineering, LLC
SDG #: 769624

GC/MS Volatile

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2971014

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769624011	LS-TB-032326
1206424674	Laboratory Control Sample (LCS) **Batch 2971014**
1206424675	Laboratory Control Sample (LCS)
1206424676	Method Blank (MB)
1206424677	769603002(NonSDG) Matrix Spike (MS)
1206424678	769603002(NonSDG) Matrix Spike Duplicate (MSD)
1206424679	769603002(NonSDG) Matrix Spike (MS)
1206424680	769603002(NonSDG) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Blank (MB) Statement
Target analytes were detected in the blank (See Below) below the reporting limit. The associated data are qualified accordingly and reported.

Sample	Analyte	Value
1206424676 (MB)	Methylene chloride	1.13 ug/L between (0.5 - 5)

Miscellaneous Information

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or samples may have required manual integrations due to software limitations.

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**
Analytical Method: SW846 8260D
Analytical Procedure: GL-OA-E-038 REV# 32
Analytical Batch: 2972240

Preparation Method: SW846 5035
Preparation Procedure: GL-OA-E-039 REV# 14
Preparation Batch: 2972238

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769624002	LS-SB-18-4.0
769624003	LS-SB-18-4.0-DP
769624004	LS-SB-31-3.0

1206427613	Laboratory Control Sample (LCS)
1206427614	Laboratory Control Sample (LCS)
1206427615	Method Blank (MB)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples 769624002 (LS-SB-18-4.0), 769624003 (LS-SB-18-4.0-DP), 769624004 (LS-SB-31-3.0), 769624007 (LS-SB-27-4.0), 769624009 (LS-SB-45-4.0), 769624012 (LS-SB-39-3.0), 769624014 (LS-SB-19-4.0), 769624016 (LS-SB-17-3.0), 769624017 (LS-SB-22-3.0), 769624019 (LS-SB-21.4.0) and 769624021 (LS-SB-28-3.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Technical Information

Sample Dilutions/Methanol Dilutions

Sample 769624007 (LS-SB-27-4.0) was analyzed employing a methanol dilution extraction procedure because target analyte concentrations exceeded the calibration range.
Sample 769624007 (LS-SB-27-4.0) was diluted due to the presence of non-target analytes and/or excessive hydrocarbon matrix interference.
Sample 769624007 (LS-SB-27-4.0) in this SDG was analyzed at a dilution. The sample was not analyzed at a lower dilution. There were positive results for target analytes within the middle to upper range of the calibration curve.

Analyte	**769624007**
Several	1000X

Sample Re-extraction/Re-analysis
Sample 769624007 (LS-SB-27-4.0) was re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analyses confirmed and/or passed and was reported.
Samples 769624009 (LS-SB-45-4.0) and 769624012 (LS-SB-39-3.0) were re-analyzed and reported due to possible carry-over from a previously analyzed sample.

GC/MS Semivolatile

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2970789

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2970785

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769624001	LS-SB-18-2.0-DP
769624002	LS-SB-18-4.0
769624003	LS-SB-18-4.0-DP
769624004	LS-SB-31-3.0
769624005	LS-SB-26-2.0
769624006	LS-SB-27-2.0
769624007	LS-SB-27-4.0
769624009	LS-SB-45-4.0
769624010	LS-SB-28-1.0
769624012	LS-SB-39-3.0
769624013	LS-SB-19-2.0
769624014	LS-SB-19-4.0
769624015	LS-SB-17-1.0
769624018	LS-SB-21-2.0
769624020	LS-SB-18-2.0
769624021	LS-SB-28-3.0
1206424328	Method Blank (MB) **Batch 2970789**
1206424329	Laboratory Control Sample (LCS)

1206424330 769624002(LS-SB-18-4.0) Matrix Spike (MS)
1206424331 769624002(LS-SB-18-4.0) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Surrogate Recoveries
Sample (See Below) did not meet surrogate recovery acceptance criteria. The sample was re-extracted and displayed similar surrogate failures. The failures were attributed to matrix interference. The original extraction results have been reported.

Sample	Analyte	Value
769624012 (LS-SB-39-3.0)	2, 4, 6-Tribromophenol	10* (20%-104%)
	2-Fluorophenol	8* (19%-94%)

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206424329 (LCS)	Benzaldehyde	20* (21%-89%)

Spike Recovery Statement
The MS or MSD (See Below) recovered spiked analytes outside of the established acceptance limits. As similar recoveries were displayed in the MS and MSD, the failures were attributed to sample matrix interference and the data were reported.

Sample	Analyte	Value
1206424330 (LS-SB-18-4.0MS)	Hexachlorocyclopentadiene	0* (16%-60%)
1206424331 (LS-SB-18-4.0MSD)	Hexachlorocyclopentadiene	0* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) between the MS and MSD (See Below) did not meet acceptance limits. As the individual MS and MSD recoveries were within the acceptance limits, the failures had no adverse impact on the reported sample data.

Sample	Analyte	Value
1206424330MS and 1206424331MSD (LS-SB-18-4.0)	2, 4, 5-Trichlorophenol	RPD 33* (0%-30%)
	2, 4, 6-Trichlorophenol	RPD 38* (0%-30%)
	2-Nitrophenol	RPD 32* (0%-30%)

Technical Information

Sample Dilutions
Sample 769624008 (LS-SB-45-1.0) was diluted due to the presence of one or more over-range target analytes.

Sample Re-extraction/Re-analysis
Sample 769624009 (LS-SB-45-4.0) was re-analyzed due to the possibility of carryover from the previous injection. Data were reported from the re-analysis.
Samples 769624008 (LS-SB-45-1.0), 769624016 (LS-SB-17-3.0), 769624017 (LS-SB-22-3.0) and 769624019 (LS-SB-21.4.0) were re-extracted within holding due to surrogate failure. The passing re-extraction data were reported.

Miscellaneous Information

Manual Integrations
Samples (See Below) required manual integration in order to properly identify one or more peaks and/or to correctly position the baseline as set in the calibration standard injections.

Sample	Analyte	Value
769624012 (LS-SB-39-3.0)	2-Fluorophenol	Result 297ug/kg
769624018 (LS-SB-21-2.0)	Benzaldehyde	Result 1270ug/kg

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Product: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**
Analytical Method: SW846 3541/8270E
Analytical Procedure: GL-OA-E-009 REV# 53
Analytical Batch: 2972177

Preparation Method: SW846 3541
Preparation Procedure: GL-OA-E-066 REV# 11
Preparation Batch: 2972172

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769624008	LS-SB-45-1.0
769624016	LS-SB-17-3.0
769624017	LS-SB-22-3.0
769624019	LS-SB-21.4.0
1206426480	Method Blank (MB) **Batch 2972177**
1206426481	Laboratory Control Sample (LCS)
1206426482	Laboratory Control Sample Duplicate (LCSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample Duplicate (LCSD)
An LCSD was used in place of matrix QC due to the activity of the sample matrix (ALARA).
An LCSD was used in place of matrix QC due to limited sample volume.

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206426481 (LCS)	Benzaldehyde	13* (21%-89%)
1206426482 (LCSD)	Benzaldehyde	12* (21%-89%)

Technical Information

Sample Re-extraction/Re-analysis
Samples 769624008 (LS-SB-45-1.0), 769624016 (LS-SB-17-3.0), 769624017 (LS-SB-22-3.0) and 769624019 (LS-SB-21.4.0) were re-extracted within holding due to surrogate failure. The passing re-extraction data were reported.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

GC Semivolatile Pesticide

Product: **Organochlorine Pesticides and Chlorinated Hydrocarbons**
Analytical Method: SW846 3546/8081B
Analytical Procedure: GL-OA-E-041 REV# 25
Analytical Batch: 2971023

Preparation Method: SW846 3546
Preparation Procedure: GL-OA-E-085 REV# 2
Preparation Batch: 2971021

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769624015	LS-SB-17-1.0
769624016	LS-SB-17-3.0
1206424690	Method Blank (MB) **Batch 2971023**
1206424691	Laboratory Control Sample (LCS)
1206424692	770081004(NonSDG) Matrix Spike (MS)
1206424693	770081004(NonSDG) Matrix Spike Duplicate (MSD)
1206424694	Laboratory Control Sample (LCS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The MS did not meet spike recovery acceptance criteria due to extraction efficiency issue.

Sample	Analyte	Value
1206424692 (Non SDG 770081004MS)	4, 4'-DDD	27* (33%-164%)
	Endosulfan II	22* (26%-151%)
	Endosulfan sulfate	19* (22%-164%)
	Endrin	30* (35%-162%)
	Endrin aldehyde	19* (20%-155%)
	delta-BHC	21* (28%-160%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits due to the large difference between the individual recoveries in each MS and MSD analyte pair.

Sample	Analyte	Value
1206424692MS and 1206424693MSD (Non SDG 770081004)	4, 4'-DDD	RPD 35* (0%-30%)
	Dieldrin	RPD 31* (0%-30%)
	Endosulfan II	RPD 40* (0%-30%)
	Endosulfan sulfate	RPD 42* (0%-30%)
	Endrin aldehyde	RPD 43* (0%-30%)
	Endrin ketone	RPD 41* (0%-30%)
	Methoxychlor	RPD 37* (0%-30%)
	alpha-BHC	RPD 34* (0%-30%)
	beta-BHC	RPD 37* (0%-30%)
	delta-BHC	RPD 44* (0%-30%)

	gamma-BHC (Lindane)	RPD 37* (0%-30%)

Technical Information

Florisil
Florisil clean-up was not performed on samples in this batch.

Miscellaneous Information

Manual Integrations
Sample 1206424694 (LCS) required manual integration to correctly position the baseline as set in the calibration standard injections.

Metals

Product: **Determination of Metals by ICP**
Analytical Method: SW846 3050B/6010D
Analytical Procedure: GL-MA-E-013 REV# 35

1206417408	769624002(LS-SB-18-4.0SD) Matrix Spike Duplicate (MSD)

1206417409 769624002(LS-SB-18-4.0PS) Post Spike (PS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1206417407 (LS-SB-18-4.0MS)	Copper	-131* (75%-125%)
	Lead	51.1* (75%-125%)
	Nickel	54.9* (75%-125%)
	Vanadium	24.7* (75%-125%)
1206417408 (LS-SB-18-4.0MSD)	Arsenic	129* (75%-125%)
	Copper	-77.8* (75%-125%)
	Lead	66.7* (75%-125%)
	Nickel	70.2* (75%-125%)
	Potassium	133* (75%-125%)
	Vanadium	40.6* (75%-125%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between qualifying analyte results in the MS and MSD were not within the acceptance limits. Sample non-homogeneity and/or possible matrix interferences may be suspected.

Sample	Analyte	Value
1206417407MS and 1206417408MSD (LS-SB-18-4.0)	Iron	RPD 21.9* (0%-20%)
	Magnesium	RPD 26.4* (0%-20%)
	Manganese	RPD 26.7* (0%-20%)
	Zinc	RPD 33.8* (0%-20%)

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw values of iron, manganese, barium, and calcium within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 769624001 (LS-SB-18-2.0-DP), 769624002 (LS-SB-18-4.0), 769624003 (LS-SB-18-4.0-DP), 769624004 (LS-SB-31-3.0), 769624005 (LS-SB-26-2.0), 769624006 (LS-SB-27-2.0), 769624008 (LS-SB-45-1.0), 769624009 (LS-SB-45-4.0), 769624010 (LS-SB-28-1.0), 769624012 (LS-SB-39-3.0), 769624013 (LS-SB-19-2.0), 769624017 (LS-SB-22-3.0), 769624018 (LS-SB-21-2.0), 769624020 (LS-SB-18-2.0) and 769624021 (LS-SB-28-3.0).

Samples were initially diluted due to the yellow matrix that can cause instrument failures. 769624004 (LS-SB-31-3.0), 769624005 (LS-SB-26-2.0), 769624008 (LS-SB-45-1.0), 769624010 (LS-SB-28-1.0) and 769624021 (LS-SB-28-3.0).

Product: **Mercury Analysis Using the Perkin Elmer Automated Mercury Analyzer**
Analytical Method: SW846 7471B
Analytical Procedure: GL-MA-E-010 REV# 42
Analytical Batch: 2967376

Preparation Method: SW846 7471B Prep
Preparation Procedure: GL-MA-E-010 REV# 42
Preparation Batch: 2967375

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
769624001	LS-SB-18-2.0-DP
769624002	LS-SB-18-4.0
769624003	LS-SB-18-4.0-DP

1206418054	Laboratory Control Sample (LCS)
1206418055	769624002(LS-SB-18-4.0D) Sample Duplicate (DUP)
1206418056	769624002(LS-SB-18-4.0S) Matrix Spike (MS)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

General Chemistry

Product: **Hexavalent Chromium**
Analytical Method: SW846 7196A
Analytical Procedure: GL-GC-E-044 REV# 29
