All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement
The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Hexavalent Chromium	1206425693 (LS-SB-18-4.0MS)	27.5* (75%-125%)

Technical Information

Sample Dilutions
The following sample 769624018 (LS-SB-21-2.0) in this sample group was diluted due to matrix interference. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Re: Groundwater and Surface Water Sampling
Work Order: 770021

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 26, 2026. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 770021 GEL Work Order: 770021

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria
** Analyte is a Tracer compound
** Analyte is a surrogate compound
B The target analyte was detected in the associated blank.
E Concentration of the target analyte exceeds the instrument calibration range
J Value is estimated
Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Notes:

The Qualifiers in this report are defined as follows:

- U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J J Value is estimated
- B B The target analyte was detected in the associated blank.
- E E Concentration of the target analyte exceeds the instrument calibration range
- Q Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Relative Percent Difference (RPD) Statement
The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. However, the spike recoveries passed. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Technical Information

Sample Dilutions/Methanol Dilutions

Samples 1206427786 (Non SDG 770676001MS), 1206427787 (Non SDG 770676001MSD), 1206427788 (Non SDG 770676001MS) and 1206427789 (Non SDG 770676001MSD) were analyzed employing a methanol dilution extraction procedure because the sample matrices were not amenable to more concentrated analyses.
Sample 770021011 (LS-SB-48-3.0) was analyzed employing a methanol dilution extraction procedure because the received water preserved vials were cracked and leaking.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Miscellaneous Information

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or samples may have required manual integrations due to software limitations.

GC/MS Semivolatile

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206424362 (LCS)	Benzaldehyde	16* (21%-89%)

Spike Recovery Statement
The MS or MSD (See Below) recovered spiked analytes outside of the established acceptance limits. As similar recoveries were displayed in the MS and MSD, the failures were attributed to sample matrix interference and that the samples were analyzed at a dilution. The data were reported.

Sample	Analyte	Value
1206424363 (LS-SB-44-1.0MS)	2-Methyl-4, 6-dinitrophenol	0* (10%-120%)
	Benzaldehyde	0* (12%-103%)
	Hexachlorocyclopentadiene	0* (16%-60%)
1206424364 (LS-SB-44-1.0MSD)	2, 4-Dinitrophenol	0* (19%-117%)
	2-Methyl-4, 6-dinitrophenol	0* (10%-120%)
	Benzaldehyde	0* (12%-103%)
	Hexachlorocyclopentadiene	0* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) for the MS and MSD, (See Below), were not within the acceptance limits. The failures were attributed to matrix interference and that the samples were analyzed at a dilution. The data were reported.

Sample	Analyte	Value
1206424363MS and 1206424364MSD (LS-SB-44-1.0)	2, 4-Dinitrophenol	RPD 200* (0%-30%)

Technical Information

Sample Dilutions
Samples 1206424363 (LS-SB-44-1.0MS), 1206424364 (LS-SB-44-1.0MSD) and 770021004 (LS-SB-44-1.0) were diluted because the extracts were very dark and/or viscous. The data from the dilutions are reported.

Sample Re-extraction/Re-analysis
Samples 770021005 (LS-SB-47-1.0), 770021008 (LS-SB-46-1.0) and 770021010 (LS-SB-48-1.0) were re-extracted within holding due to surrogate failure. The passing re-extraction data were reported.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB(See Below) displayed target analytes below the reporting limit. As these analytes were not detected above the reporting limit in the associated sample, the data were reported and qualified accordingly.

Sample	Analyte	Value
1206425422 (MB)	Di-n-butylphthalate	46.8 ug/kg * 10 > 0

Surrogate Recoveries
Samples (See Below) did not meet surrogate recovery acceptance criteria. The samples were analyzed at a dilution. As a result, one or more surrogates were diluted out of the acceptance limits.

Sample	Analyte	Value
1206425424 (Non SDG 770020002MS)	2-Fluorobiphenyl	95* (20%-93%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits due to the large difference between the individual recoveries in each MS and MSD analyte pair. The failures may be attributed to an error in the extraction process.

Technical Information

Sample Dilutions
Samples 1206425424 (Non SDG 770020002MS) and 1206425425 (Non SDG 770020002MSD) were diluted due to the presence of non-target analytes. The data from the dilutions are reported.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample Duplicate (LCSD)
An LCSD was used in place of matrix QC due to the activity of the sample matrix (ALARA).
An LCSD was used in place of matrix QC due to limited sample volume.

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CCV Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8270 for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8270 outlier acceptance criteria. If required, a CRDL was analyzed after the CCVs to demonstrate that there is adequate sensitivity to detect the failed compounds at the applicable lower quantitation limit.

Quality Control (QC) Information

Surrogate Recoveries
Sample (See Below) displayed failing surrogate recoveries. Because the recoveries were biased high and target analytes were not detected in the associated samples above the reporting limit, the data were reported.

Sample	Analyte	Value
1206429692 (MB)	2-Fluorophenol	95* (19%-94%)
	Nitrobenzene-d5	91* (19%-90%)

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206429693 (LCS)	Benzaldehyde	12* (21%-89%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) between the MS and MSD (See Below) did not meet acceptance limits. As the individual MS and MSD recoveries were within the acceptance limits, the failures had no adverse impact on the reported sample data.

Sample	Analyte	Value
1206428780MS and 1206428781MSD (Non SDG 770982001)	1, 1'-Biphenyl, 1, 2, 4, 5-Tetrachlorobenzene	RPD 33* (0%-30%)

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike

digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between qualifying analyte results in the MS and MSD were not within the acceptance limits. Sample non-homogeneity and/or possible matrix interferences may be suspected.

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw values of iron, manganese, and calcium within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 770021002 (LS-SB-43-1.0), 770021004 (LS-SB-44-1.0), 770021005 (LS-SB-47-1.0), 770021008 (LS-SB-46-1.0), 770021009 (LS-SB-46-3.0), 770021010 (LS-SB-48-1.0) and 770021012 (LS-SB-29-2.0).

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement
The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Hexavalent Chromium	1206425705 (LS-SB-43-1.0MS)	60.9* (75%-125%)

Technical Information

Sample Dilutions
The following samples 770021006 (LS-SB-47-3.0) and 770021007 (LS-SB-47-3.0-DP) in this sample group were diluted due to matrix interference. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on May 28, 2026. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Caitlyn Mettetal for

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 778952 GEL Work Order: 778952

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

J Value is estimated

N/A RPD or %Recovery limits do not apply.

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Surrogate Recoveries
Surrogate recoveries in sample (See Below) was outside the acceptance limits. The recoveries were similar. It is believed possible matrix interference has been demonstrated

Sample	Analyte	Value
1206494037 (Non SDG 779998001MS)	1, 2-Dichloroethane-d4	137* (71%-131%)

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206494034 (LCS)	Carbon disulfide	135* (70%-130%)
	Vinyl chloride	146* (70%-130%)

Matrix Spike/Matrix Spike Duplicate Recovery Statement
The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The recoveries were similar. It is believed possible matrix interference has been demonstrated.

Sample	Analyte	Value
1206494037 (Non SDG 779998001MS)	1, 1, 1-Trichloroethane	142* (60%-123%)
	1, 1-Dichloroethylene	156* (59%-138%)
	Carbon tetrachloride	142* (60%-127%)
	cis-1, 3-Dichloropropylene	139* (61%-123%)
1206494038 (Non SDG 779998001MSD)	1, 1, 1-Trichloroethane	129* (60%-123%)
	1, 1-Dichloroethylene	141* (59%-138%)
	Carbon tetrachloride	128* (60%-127%)
	cis-1, 3-Dichloropropylene	135* (61%-123%)

The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The associated spike and/or spike duplicate passed recoveries near the lower/upper end of the limits.

Sample	Analyte	Value
1206494037 (Non SDG 779998001MS)	1, 2-Dichloroethane	144* (58%-130%)
	Bromodichloromethane	133* (65%-125%)

Technical Information

Sample Re-extraction/Re-analysis
Samples 778952001 (LS-TB-052726) and 778952006 (LS-EB-052726) were re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analyses confirmed and/or passed and were reported.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206481373 (LCS)	4-Nitrophenol	9* (25%-69%)

Spike Recovery Statement
The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206482025 (Non SDG 779011001MS)	Benzaldehyde	12* (16%-109%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries which attributed to the RPD failures. The data were reported.

Sample	Analyte	Value
1206482025MS and 1206482026MSD (Non SDG 779011001)	4-Nitrophenol	147* (0%-30%)
	Benzaldehyde	42* (0%-30%)
1206483513MS and 1206483514MSD (Non SDG 779048004)	Benzaldehyde	34* (0%-30%)

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CCV Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8270 for samples 778952002 (LS-SB-38-1.0), 778952003 (LS-SB-38-5.0), 778952004 (LS-SB-37-1.0) and 778952005 (LS-SB-37-3.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8270 outlier acceptance criteria. If required, a CRDL was analyzed after the CCVs to demonstrate that there is adequate sensitivity to detect the failed compounds at the applicable lower quantitation limit.
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8270 for samples and the associated QC. One or more target analytes failed acceptance criteria with a positive bias. As there were no target analytes detected in the associated samples above the reporting limits, the data were reported.

Quality Control (QC) Information

Surrogate Recoveries
Sample (See Below) did not meet surrogate recovery acceptance criteria. The sample was re-extracted and displayed similar surrogate failures. The failures were attributed to matrix interference. The original extraction results have been reported.

Sample	Analyte	Value
778952002 (LS-SB-38-1.0)	2, 4, 6-Tribromophenol	18* (20%-130%)

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206482684 (LCS)	Benzaldehyde	0* (21%-89%)

Spike Recovery Statement
The MS and/or MSD (See Below) recovered spiked analytes outside of the established acceptance limits. As similar recoveries were displayed in the MS and MSD, the failures were attributed to sample matrix interference and that the samples were analyzed at a dilution. The data were reported.

Technical Information

Preparation/Analytical Method Verification
Samples 1206482685 (Non SDG 779194003MS) and 1206482686 (Non SDG 779194003MSD) did not concentrate down to 1 mL. Final volume was recorded in the Prep Logbook.
Samples 1206482685 (Non SDG 779194003MS) and 1206482686 (Non SDG 779194003MSD) were noted as being insulation type material. An aliquot of 10 grams was used for extraction.

Sample Dilutions

Samples 1206482685 (Non SDG 779194003MS) and 1206482686 (Non SDG 779194003MSD) were diluted due to extract final volume greater than 1.0 mL.

Sample Re-extraction/Re-analysis
Sample 778952002 (LS-SB-38-1.0) was re-analyzed due to the possibility of carryover from the previous injection. Data were reported from the re-analysis.
Samples 1206482685 (Non SDG 779194003MS) and 1206482686 (Non SDG 779194003MSD) were re-analyzed at a dilution due to initial paperwork having incorrect final volumes.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

	Silver	130* (75%-125%)
	Vanadium	223* (75%-125%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between qualifying analyte results in the MS and MSD were not within the acceptance limits. Sample non-homogeneity and/or possible matrix interferences may be suspected.

Sample	Analyte	Value
1206481238MS and 1206481239MSD (LS-SB-38-1.0)	Antimony	RPD 31.1* (0%-20%)

	Selenium	RPD 26.6* (0%-20%)
	Sodium	RPD 22.1* (0%-20%)
	Zinc	RPD 40.1* (0%-20%)

Serial Dilution % Difference Statement
The serial dilution is used to assess matrix suppression or enhancement. Raw element concentrations 25x the IDL/MDL for CVAA, 50X the IDL/MDL for ICP and 100X the IDL/MDL for ICP-MS analyses are applicable for serial dilution assessment. Not all applicable analytes met the established acceptance criteria for the serial dilution; therefore, matrix suppression may be suspected, and the data has been qualified.

	Calcium	25 *(0%-20%)

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were initially ran diluted due to the yellow matrix that can cause instrument failures. Samples were diluted to bring raw values of iron, manganese, calcium, magnesium, and zinc within the instrument's linear range and, for analytes affected by interference, to ensure the

inter-element correction factors were valid. 778952002 (LS-SB-38-1.0), 778952003 (LS-SB-38-5.0), 778952004 (LS-SB-37-1.0) and 778952005 (LS-SB-37-3.0).

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Re: Liberty Steel VCC Sampling
Work Order: 779423

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on May 29, 2026. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Client SDG: 779423 GEL Work Order: 779423

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

J Value is estimated

NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Notes:

The Qualifiers in this report are defined as follows:

U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

J J Value is estimated

NJ NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Surrogate Recoveries
Surrogate recoveries in sample (See Below) was outside the acceptance limits. The recoveries were similar. It is believed possible matrix interference has been demonstrated

Sample	Analyte	Value
1206494037 (Non SDG 779998001MS)	1, 2-Dichloroethane-d4	137* (71%-131%)

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value

1206494034 (LCS)	Carbon disulfide	135* (70%-130%)
	Vinyl chloride	146* (70%-130%)

Matrix Spike/Matrix Spike Duplicate Recovery Statement
The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The recoveries were similar. It is believed possible matrix interference has been demonstrated.

Sample	Analyte	Value
1206494037 (Non SDG 779998001MS)	1, 1, 1-Trichloroethane	142* (60%-123%)
	1, 1-Dichloroethylene	156* (59%-138%)
	Carbon tetrachloride	142* (60%-127%)
	cis-1, 3-Dichloropropylene	139* (61%-123%)
1206494038 (Non SDG 779998001MSD)	1, 1, 1-Trichloroethane	129* (60%-123%)
	1, 1-Dichloroethylene	141* (59%-138%)
	Carbon tetrachloride	128* (60%-127%)
	cis-1, 3-Dichloropropylene	135* (61%-123%)

The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The associated spike and/or spike duplicate passed recoveries near the lower/upper end of the limits.

Sample	Analyte	Value
1206494037 (Non SDG 779998001MS)	1, 2-Dichloroethane	144* (58%-130%)
	Bromodichloromethane	133* (65%-125%)
	Carbon disulfide	144* (60%-139%)
	Chloroform	130* (64%-122%)
	Cyclohexane	126* (51%-125%)
	Dichlorodifluoromethane	172* (37%-162%)
	Methylcyclohexane	124* (58%-122%)
	tert-Butyl methyl ether	127* (60%-124%)
	trans-1, 2-Dichloroethylene	135* (64%-127%)
	trans-1, 3-Dichloropropylene	133* (62%-127%)

Internal Standard (ISTD) Acceptance
In sample 779423001 (LS-TB-052826), internal standard responses were outside the required acceptance criteria. Sample re-analysis confirmed matrix interference. The re-analysis results are reported.

Technical Information

Sample Re-extraction/Re-analysis
Sample 779423001 (LS-TB-052826) was re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analyses confirmed and/or passed and was reported.

However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Relative Percent Difference (RPD) Statement
The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Sample	Analyte	Value
1206495893MS and 1206495894MSD (Non SDG 779180001)	Bromomethane	RPD 59* (0%-20%)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206485620 (LCS)	Benzaldehyde	0* (21%-89%)

Spike Recovery Statement
The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The MS and MSD were fortified with all target compounds and some of these are subject to loss during the extraction process as noted in the method. Other compounds are prone to degradation and low recovery due to chemical interactions with other compounds in the spike standards. The data were reported.

Sample	Analyte	Value
1206485623 (LS-SB-30-6.0MS)	Hexachlorocyclopentadiene	0* (10%-78%)

1206485624 (LS-SB-30-6.0MSD)	Hexachlorocyclopentadiene	0* (10%-78%)

Technical Information

Sample Re-extraction/Re-analysis
Sample 779423005 (LS-SB-33-4.0-DP) was re-extracted within holding due to surrogate failure. The passing re-extraction data were reported.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Data Summary:

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Re: Liberty Steel VCC Sampling
Work Order: 779753

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on June 03, 2026. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 779753 GEL Work Order: 779753

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

E Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Notes:

The Qualifiers in this report are defined as follows:

U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

J J Value is estimated

E E Concentration of the target analyte exceeds the instrument calibration range

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples 779753002 (LS-SB-26-3.5), 779753003 (LS-SB-44-2.5), 779753005 (LS-SB-36-3.0), 779753006 (LS-SB-35-3.0), 779753007 (LS-SB-34-2.5), 779753009 (LS-SB-12-7.0), 779753011 (LS-SB-13-6.0), 779753013 (LS-SB-10-5.0), 779753015 (LS-SB-11-6.0) and 779753017 (LS-SB-09-4.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Surrogate Recoveries
Surrogate recoveries in sample (See Below) was outside the acceptance limits. The recoveries were similar. It is believed possible matrix interference has been demonstrated

Sample	Analyte	Value
1206500700 (Non SDG 780268001MSD)	Toluene-d8	78* (79%-122%)

Relative Percent Difference (RPD) Statement
The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. However, the spike recoveries passed. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Sample	Analyte	Value
1206500699MS and 1206500700MSD (Non SDG 780268001)	Tetrachloroethylene	RPD 21* (0%-20%)

Technical Information

Sample Dilutions/Methanol Dilutions
Samples 1206500699 (Non SDG 780268001MS), 1206500700 (Non SDG 780268001MSD), 1206500701 (Non SDG 780268001MS) and 1206500702 (Non SDG 780268001MSD) were analyzed employing a methanol dilution extraction procedure because the sample matrices were not amenable to more concentrated analyses.

Sample Re-extraction/Re-analysis
Sample 779753009 (LS-SB-12-7.0) was re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analyses confirmed and/or passed and was reported.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery

The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206492115 (LCS)	Benzaldehyde	0* (21%-89%)

Spike Recovery Statement

The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206492117 (Non SDG 780459001MSD)	2, 4, 5-Trichlorophenol	171* (23%-127%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) for the MS and MSD, (See Below), were not within the acceptance limits. The failures were attributed to matrix interference. The data were reported.

Sample	Analyte	Value
1206492116MS and 1206492117MSD (Non SDG 780459001)	2, 4, 5-Trichlorophenol	RPD 32* (0%-30%)

Technical Information

Sample Dilutions
Sample 779753011 (LS-SB-13-6.0) was diluted due to the presence of one or more target analytes at concentrations exceeding the established calibration range.

Sample Re-extraction/Re-analysis
Sample 779753012 (LS-SB-10-3.0) was re-analyzed due to the possibility of carryover from the previous injection. Data were reported from the re-analysis.

Miscellaneous Information

Manual Integrations
Sample (See Below) required manual integration to ensure proper identification of one or more peaks and/or correct baseline placement consistent with the calibration standard injections.

Sample	Analyte	Value
779753012 (LS-SB-10-3.0)	2, 4-Dimethylphenol	Result 446ug/kg

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Calibration Information

CCV Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8270 for samples 779753002 (LS-SB-26-3.5), 779753003 (LS-SB-44-2.5), 779753004 (LS-SB-36-0.5), 779753005 (LS-SB-36-3.0), 779753006 (LS-SB-35-3.0), 779753007 (LS-SB-34-2.5), 779753008 (LS-SB-12-5.0) and 779753009 (LS-SB-12-7.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8270 outlier acceptance criteria. If required, a CRDL was analyzed after the CCVs to demonstrate that there is adequate sensitivity to detect the failed compounds at the applicable lower quantitation limit.
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8270 for samples 779753002 (LS-SB-26-3.5), 779753003 (LS-SB-44-2.5), 779753004 (LS-SB-36-0.5), 779753006 (LS-SB-35-3.0), 779753007 (LS-SB-34-2.5), 779753008 (LS-SB-12-5.0) and 779753009 (LS-SB-12-7.0) and the associated QC. One or more target analytes failed acceptance criteria with a positive bias. As there were no target analytes detected in the associated samples above the reporting limits, the data were reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CRDL/PQL Requirements
The PQL standard recoveries for SW846 6010D met the control limits with the exception of thallium. Client sample concentrations were less than the MDL; therefore the data were not adversely affected. 779753002 (LS-SB-26-3.5).
The PQL standard recoveries for 6010D met the control limits with the exception of nickel. Client sample concentrations were greater than two times the PQL; therefore the data were not adversely affected. 779753002 (LS-SB-26-3.5).

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted to bring raw values of iron, calcium, manganese, magnesium, titanium, zinc within the instrument's linear range and, for analytes affected by interference, to ensure the inter-element correction factors were valid. Samples required dilutions in order to minimize suppression of thallium due to matrix interferences. 779753002 (LS-SB-26-3.5), 779753003 (LS-SB-44-2.5), 779753004 (LS-SB-36-0.5), 779753005 (LS-SB-36-3.0), 779753006 (LS-SB-35-3.0), 779753007 (LS-SB-34-2.5) and 779753014 (LS-SB-11-3.0).

Re: Groundwater and Surface Water Sampling
Work Order: 767718

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 11, 2026. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Caitlyn Mettetal for

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 767718 GEL Work Order: 767718

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria
** Analyte is a Tracer compound
** Analyte is a surrogate compound
E Concentration of the target analyte exceeds the instrument calibration range
H Analytical holding time was exceeded
J Value is estimated
Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
h Preparation or preservation holding time was exceeded

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

The Qualifiers in this report are defined as follows:

- U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J J Value is estimated
- H H Analytical holding time was exceeded
- h h Preparation or preservation holding time was exceeded
- E E Concentration of the target analyte exceeds the instrument calibration range
- Q Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples 767718004 (LS-SD-01), 767718005 (LS-SD-01-DP) and 767718006 (LS-SB-04-3.0) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206415268 (LCS)	Vinyl chloride	156* (54%-142%)

Matrix Spike/Matrix Spike Duplicate Recovery Statement
The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The associated spike and/or spike duplicate passed recoveries near the lower/upper end of the limits.

Sample	Analyte	Value
1206415272 (Non SDG 767858001MSD)	Vinyl chloride	155* (32%-146%)

Technical Information

Sample Dilutions/Methanol Dilutions
Samples 1206415271 (Non SDG 767858001MS), 1206415272 (Non SDG 767858001MSD), 1206415273 (Non SDG 767858001MS) and 1206415274 (Non SDG 767858001MSD) were analyzed employing a methanol dilution extraction procedure because the sample matrices were not amenable to more concentrated analyses.

Sample Re-extraction/Re-analysis

Sample 767718004 (LS-SD-01) was re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analyses confirmed and/or passed and was reported.

Product: **Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer**

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for

samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206416506 (LCS)	Bromomethane	134* (70%-130%)
	Dichlorodifluoromethane	140* (70%-130%)

Matrix Spike/Matrix Spike Duplicate Recovery Statement
The spike and/or spike duplicate (See Below) recoveries were not all within the acceptance limits. The associated spike and/or spike duplicate passed recoveries near the lower/upper end of the limits.

Sample	Analyte	Value
1206416510 (Non SDG 768790001MSD)	Trichlorofluoromethane	138* (51%-134%)

Relative Percent Difference (RPD) Statement
The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. However, the spike recoveries passed. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Sample	Analyte	Value
1206416509MS and 1206416510MSD (Non SDG 768790001)	Chloromethane	RPD 90* (0%-20%)

1206405356	767718006(LS-SB-04-3.0) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206405354 (LCS)	1, 4-Dioxane	24* (35%-53%)
	2, 4-Dimethylphenol	27* (32%-74%)
	Benzaldehyde	8* (21%-89%)
	Diethylphthalate	51* (52%-123%)
	Hexachlorocyclopentadiene	16* (26%-82%)
	m-Nitroaniline	30* (41%-108%)

Spike Recovery Statement
The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206405355 (LS-SB-04-3.0MS)	Benzaldehyde	10* (12%-103%)
	Hexachlorocyclopentadiene	0* (16%-60%)
1206405356 (LS-SB-04-3.0MSD)	Hexachlorocyclopentadiene	0* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries which attributed to the RPD failures. The data were reported.

Sample	Analyte	Value
1206405355MS and 1206405356MSD (LS-SB-04-3.0)	2-Methyl-4, 6-dinitrophenol	41* (0%-30%)

Technical Information

Sample Dilutions
Sample 767718004 (LS-SD-01) was diluted because the extract was very dark and/or viscous. The data from the dilution are reported.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Preparation/Analytical Method Verification
Samples and the associated QC samples in this batch were cleaned using alumina in order to remove oil and other high molecular weight interferences.
Samples and QC in this batch were cleaned with activated copper in order to remove sulfur.

All reported analyte detections in client and quality control samples were within the established retention time windows. Reported analyte concentrations were confirmed on dissimilar columns.

Sample Dilutions

Samples 1206405639 (LS-SB-04-1.0MS), 1206405640 (LS-SB-04-1.0MSD) and 767718002 (LS-SB-04-1.0) were diluted due to high level of non-target analytes within the retention time window of interest.

Miscellaneous Information

Manual integrations
Samples 1206405639 (LS-SB-04-1.0MS), 1206405640 (LS-SB-04-1.0MSD), 767718002 (LS-SB-04-1.0), 767718003 (LS-SB-04-1.0-DP) and 767718006 (LS-SB-04-3.0) required manual integration to correctly position the baseline as set in the calibration standard injections.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CRDL/PQL Requirements
The PQL standard recoveries for SW846 6010C or 6010D met the control limits with the exception of arsenic. Client sample concentrations were less than the MDL or greater than two times the PQL; therefore the data were not adversely affected. 767718004 (LS-SD-01).

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1206404419 (LS-SB-04-1.0MS)	Calcium	-43.3* (75%-125%)
1206404420 (LS-SB-04-1.0MSD)	Calcium	-84.8* (75%-125%)

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw iron and manganese values within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 767718004 (LS-SD-01), 767718005 (LS-SD-01-DP) and 767718007 (LS-SB-34-1.0).

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology. Holding time is measured by comparison of the date and time of sample collection to the date and time of sample preparation and analysis. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. Samples (See Below) were initially analyzed within holding; however, the holding times had expired prior to reanalysis of samples.

Sample	Analyte	Value
1206405875 (Non SDG 760687007MS)	Mercury	Received 19-JAN-26, within holding, analyzed 13-MAR-26, out of holding 12-FEB-26
	Mercury	Received 19-JAN-26, within holding, prepped 12-MAR-26, out of holding 12-FEB-26

	Mercury	Received 19-JAN-26, within holding, prepped 12-MAR-26, out of holding 12-FEB-26

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 1206405875 (Non SDG 760687007MS) and 1206405876 (Non SDG 760687007MSD) in this SDG were diluted 20x due to the tissue/fish matrix. The matrix forms an emulsion that clogs the liquid/air separator membrane causing instrument failure.

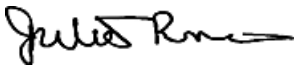
Re: Liberty Steel VCC Sampling
Work Order: 768213

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 12, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the previous revision noted as SDG number 768213 Rev02 in the left-hand footer of the data report. The report has been revised to include VOC analysis for 1,4-Dioxane.



The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 768213 GEL Work Order: 768213

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria
** Analyte is a Tracer compound
** Analyte is a surrogate compound
B The target analyte was detected in the associated blank.
J Value is estimated
Q ISO17025 / NELAC accredited; SC certification not held at time of analysis
Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

J	J	Value is estimated
B	B	The target analyte was detected in the associated blank.
Q	Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
Q	Q	ISO17025 / NELAC accredited; SC certification not held at time of analysis

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206419148 (LCS)	1, 1, 2, 2-Tetrachloroethane	133* (70%-130%)

The LCS recoveries for 1,4-Dioxane were not within the acceptance limits. The data are reported at the client’s

request.

Sample	Analyte	Value
1206419149 (LCS)	1, 4-Dioxane	60* (70%-130%)

Quality Control (QC) Information

Laboratory Control Sample Duplicate (LCSD)
An LCS/LCSD pair were analyzed in order to demonstrate precision and accuracy.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD between the LCS/LCSD pair (See Below) were not all within the acceptance limits.

1206409551	768399001(NonSDG) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CCV Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8270 for samples 768213002 (LS-SW-04), 768213004 (LS-SW-03) and 768213006 (LS-SW-02) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8270 outlier acceptance criteria. If required, a CRDL was analyzed after the CCVs to demonstrate that there is adequate sensitivity to detect the failed compounds at the applicable lower quantitation limit.

Quality Control (QC) Information

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits due to the large difference between the individual recoveries in each MS and MSD analyte pair. The failures may be attributed to an error in the extraction process.

Sample	Analyte	Value
1206409550MS and 1206409551MSD (Non SDG 768399001)	4-Chloroaniline	RPD 43* (0%-30%)

Miscellaneous Information

Manual Integrations
Sample (See Below) required manual integration to ensure proper identification of one or more peaks and/or correct baseline placement consistent with the calibration standard injections.

Sample	Analyte	Value
1206409551 (Non SDG 768399001MSD)	Benzo(ghi)perylene	Result 78.8ug/L

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

The samples in this SDG were analyzed on a "dry weight" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value

1206412894 (LCS)	Benzaldehyde	13* (21%-89%)

Spike Recovery Statement
The MS and/or MSD (See Below) spike recoveries were not within the acceptance limits. The associated MS or MSD passed recoveries, as did the LCS. It appears that the low spike recoveries were isolated to the MS or MSD only and were the result of a poor extraction.

Sample	Analyte	Value
1206412896 (LS-SB-20-1.0MSD)	Phenol	0* (16%-107%)

The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206412896 (LS-SB-20-1.0MSD)	4-Nitrophenol	0* (14%-122%)
	Hexachlorocyclopentadiene	10* (16%-60%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) between the MS and MSD (See Below) did not meet acceptance limits. As the individual MS and MSD recoveries were within the acceptance limits, the failures had no adverse impact on the reported sample data.

The RPD values between the MS and MSD, (See Below), were not within the acceptance limits due to the large difference between the individual recoveries in each MS and MSD analyte pair. The failures may be attributed to an error in the extraction process.

Sample	Analyte	Value
1206412895MS and 1206412896MSD (LS-SB-20-1.0)	Phenol	RPD 200* (0%-30%)

The RPD values between the MS and MSD, (See Below), were not within the acceptance limits. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries which attributed to the RPD failures. The data were reported.

Sample	Analyte	Value
1206412895MS and 1206412896MSD (LS-SB-20-1.0)	4-Nitrophenol	RPD 200* (0%-30%)

Technical Information

Sample Re-extraction/Re-analysis
Sample 768213008 (LS-SD-02) was re-extracted within holding due to the initial extraction being biphasic and had no surrogate recovery. The passing re-extraction data were reported.

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Technical Information

Preparation/Analytical Method Verification
Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Sample was diluted in order to bring raw values of iron within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 768213008 (LS-SD-02).

Re: Liberty Steel VCC Sampling
Work Order: 771803

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on April 09, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 771803 in the left-hand footer of the data report. This package has been revised to add "Field Filtered" to the dissolved sample ID names and correct the ID name for sample 771803012.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Caitlyn Mettetal for

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 771803 GEL Work Order: 771803

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

J Value is estimated

N/A RPD or %Recovery limits do not apply.

Q ISO17025 / NELAC accredited; SC certification not held at time of analysis

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

h Preparation or preservation holding time was exceeded

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

QC Summary

Workorder: **771803**

Parmname	NOM	Sample	Qual	QC	Units	RPD/D%	REC%	Range	Anlst	Date	Time

The Qualifiers in this report are defined as follows:

U	U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	J	Value is estimated
h	h	Preparation or preservation holding time was exceeded
Q	Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
Q	Q	ISO17025 / NELAC accredited; SC certification not held at time of analysis
E	E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

TPU and Counting Uncertainty are calculated at the 95% confidence level (1.96-sigma).

The Qualifiers in this report are defined as follows:

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
** Indicates analyte is a surrogate/tracer compound.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptence criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples 771803001 (LS-TB-040926), 771803002 (LS-MW-04), 771803004 (LS-MW-22), 771803006 (LS-MW-22-DP), 771803008 (LS-SW-06) and 771803010 (LS-SW-06-DP) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. Quality Control (QC) Information

Relative Percent Difference (RPD) Statement
The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. However, the spike recoveries passed. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CCV Requirements

All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8270 for samples and the associated QC. One or more target analytes failed acceptance criteria with a positive bias. As there were no target analytes detected in the associated samples above the reporting limits, the data were reported.

Quality Control (QC) Information

Surrogate Recoveries
Sample (See Below) displayed failing surrogate recoveries. Because the recoveries were biased high and target analytes were not detected in the associated samples above the reporting limit, the data were reported.

Sample	Analyte	Value
1206435784 (Non SDG 771903001MSD)	2-Fluorophenol	78* (15%-72%)

Sample (See Below) did not meet surrogate recovery criteria. The sample was re-extracted out of holding and displayed similar low, but passing surrogate recoveries. The failures were attributed to sample matrix interference and the initial data were reported.

Sample	Analyte	Value
771803006 (LS-MW-22-DP)	p-Terphenyl-d14	18* (20%-118%)

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206435780 (LCS)	Benzaldehyde	25* (27%-111%)
	Hexachlorocyclopentadiene	30* (31%-64%)

Spike Recovery Statement
The MS or MSD (See Below) recovered spiked analytes outside of the established acceptance limits. Because the recoveries were biased high and the target analytes were not detected in the associated samples above the reporting limit, the data were reported.

Sample	Analyte	Value
1206435783 (Non SDG 771903001MS)	4-Nitrophenol	96* (9%-95%)
1206435784 (Non SDG 771903001MSD)	Phenol	83* (16%-74%)
	m, p-Cresols	110* (21%-105%)

The MS and/or MSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206435783 (Non SDG 771903001MS)	Benzaldehyde	0* (16%-109%)
1206435784 (Non SDG 771903001MSD)	Benzaldehyde	15* (16%-109%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries which attributed to the RPD failures. The data were reported.

Sample	Analyte	Value
1206435783MS and 1206435784MSD (Non SDG 771903001)	Benzaldehyde	RPD 200* (0%-30%)

Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all

Technical Information

Preparation/Analytical Method Verification
Samples and the associated QC samples in this batch were cleaned using alumina in order to remove oil and other high molecular weight interferences.
Samples and QC in this batch were cleaned with activated copper in order to remove sulfur.

All reported analyte detections in client and quality control samples were within the established retention time windows. Reported analyte concentrations were confirmed on dissimilar columns.

Miscellaneous Information

Manual integrations

Samples (See Below) required manual integration to correctly position the baseline as set in the calibration standard injections.

Quality Control (QC) Information

Serial Dilution % Difference Statement
The serial dilution is used to assess matrix suppression or enhancement. Raw element concentrations 25x the IDL/MDL for CVAA, 50X the IDL/MDL for ICP and 100X the IDL/MDL for ICP-MS analyses are applicable for serial dilution assessment. Not all the applicable analytes were within the established acceptance criteria. Matrix suppression may be suspected. The data has been qualified.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted in order to bring raw values of calcium, iron and manganese within the linear range of the instrument, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid. 771803004 (LS-MW-22), 771803005 (LS-MW-22 Field Filtered), 771803006 (LS-MW-22-DP) and 771803007 (LS-MW-22-DP Field Filtered).

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analyte. The post spike recovery was within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recovery may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1206432310 (LS-SD-03MS)	Magnesium	134* (75%-125%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between qualifying analyte results in the MS and MSD were not within the acceptance limits. Sample non-homogeneity and/or possible matrix interferences may be suspected.

Sample	Analyte	Value
1206432310MS and 1206432311MSD (LS-SD-03)	Aluminum	RPD 21* (0%-20%)
	Iron	RPD 26.3* (0%-20%)

Technical Information

Preparation/Analytical Method Verification

Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

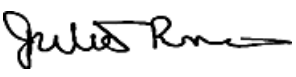
Re: Liberty Steel VCC Sampling
Work Order: 766749

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 04, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the previous revision noted as SDG number 766749 Rev01 in the left-hand footer of the data report. The report has been revised to include VOC analysis for 1,4-Dioxane.



The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 766749 GEL Work Order: 766749

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

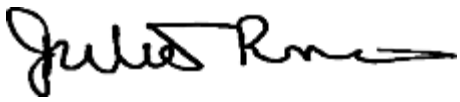
** Analyte is a Tracer compound

** Analyte is a surrogate compound

J Value is estimated

Q ISO17025 / NELAC accredited; SC certification not held at time of analysis

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.



U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

h Preparation or preservation holding time was exceeded

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Column headers are defined as follows:

DF: Dilution Factor
DL: Detection Limit
MDA: Minimum Detectable Activity
MDC: Minimum Detectable Concentration
Lc/LC: Critical Level
PF: Prep Factor
RL: Reporting Limit
SQL: Sample Quantitation Limit

Notes:

The Qualifiers in this report are defined as follows:

- U U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J J Value is estimated
- h h Preparation or preservation holding time was exceeded
- Q Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
- Q Q ISO17025 / NELAC accredited; SC certification not held at time of analysis

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Surrogate Recoveries
Samples (See Below) did not meet surrogate recovery acceptance criteria. The samples were re-extracted out of holding and exhibited similar surrogate recoveries. As such, the lab reported the in holding results.

Sample	Analyte	Value
766749002 (MW-18)	Phenol-d5	12* (15%-85%)
766749013 (MW-CA-1)	Phenol-d5	13* (15%-85%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits due to the large difference between the individual recoveries in each MS and MSD analyte pair. The failures may be attributed to an error in the extraction process.

Sample	Analyte	Value
1206400870MS and 1206400871MSD (Non SDG 766777001)	Benzaldehyde	77* (0%-30%)

Miscellaneous Information

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all

reports and forms.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206406105 (LCS)	4-Nitrophenol	21* (25%-69%)
	Hexachlorocyclopentadiene	25* (31%-64%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) between the MS and MSD (See Below) did not meet acceptance limits. As the individual MS and MSD recoveries were within the acceptance limits, the failures had no adverse impact on the reported sample data.

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples required dilutions in order to minimize suppression due to matrix interferences for selenium. 766749009 (MW-CA-2-DP Field Filtered) and 766749012 (MW-21 Field Filtered).

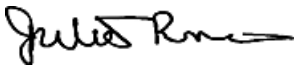
Re: Liberty Steel VCC Sampling
Work Order: 766977

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 05, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the previous revision noted as SDG number 766977 Rev01 in the left-hand footer of the data report. The report has been revised to include VOC analysis for 1,4-Dioxane.



The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. Client noted headspace on COC, no headspace seen at arrival.

The laboratory preserved the following containers:
No containers were preserved at GEL

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Julie Robinson
Project Manager

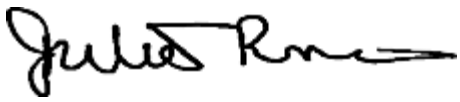
Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 766977 GEL Work Order: 766977



The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria
** Analyte is a Tracer compound
** Analyte is a surrogate compound
B The target analyte was detected in the associated blank.
E Concentration of the target analyte exceeds the instrument calibration range
J Value is estimated
Q ISO17025 / NELAC accredited; SC certification not held at time of analysis
Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
h Preparation or preservation holding time was exceeded

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.

Notes:

The Qualifiers in this report are defined as follows:

U	U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	J	Value is estimated
B	B	The target analyte was detected in the associated blank.
E	E	Concentration of the target analyte exceeds the instrument calibration range
h	h	Preparation or preservation holding time was exceeded
Q	Q	ISO17025 / NELAC accredited; SC certification not held at time of analysis
Q	Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements
All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) recoveries were not within the acceptance limits for all analytes. The unacceptable analytes were not detected in the samples associated with the laboratory control samples. Therefore, the data were reported.

Sample	Analyte	Value
1206412444 (LCS)	Carbon disulfide	138* (70%-130%)

Technical Information

Sample Dilutions/Methanol Dilutions
Sample 766977010 (MW-23) in this SDG was analyzed at a dilution. The sample was not analyzed at a lower dilution. There were positive results for target analytes within the middle to upper range of the calibration curve. Samples 766977008 (MW-CA-3) and 766977010 (MW-23) were diluted because target analyte concentrations exceeded the calibration range.

Analyte	766977	
	008	010
Several	500X 1X	250X

Sample Re-extraction/Re-analysis
Sample 766977010 (MW-23) was re-analyzed due to unacceptable surrogate and/or internal standard recoveries in the initial analysis. The re-analyses confirmed and/or passed and was reported.
Sample 766977010 (MW-23) was re-analyzed and reported due to possible carry-over from a previously analyzed sample.

Miscellaneous Information

Manual Integrations
Some initial calibration standards, continuing calibration standards, and/or sample (See Below) may have required manual integrations due to software limitations.

Sample	Analyte	Value

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB(1206402139) displayed target analytes below the reporting limit. As these analytes were not detected above the reporting limit in the associated samples 766977002 (MW-20), 766977004 (MW-19), 766977006 (MW-CA-4), 766977008 (MW-CA-3) and 766977010 (MW-23), the data were reported and qualified accordingly.

Surrogate Recoveries
Sample (See Below) did not meet surrogate recovery criteria. The sample was re-extracted out of holding and passed surrogate recovery criteria. The sample chromatograms looked similar and there was quite a bit of matrix interference present. In both extractions, a reduced sample aliquot of 200 mL was used instead of the standard 1 L. The concentrations of the detected compounds were significantly higher in the first extraction compared to the re-extraction. The lab reported both sets of results.

Sample	Analyte	Value
766977010 (MW-23)	Nitrobenzene-d5	102* (31%-100%)

MS/MSD Relative Percent Difference (RPD) Statement
The RPD values between the MS and MSD, (See Below), were not within the acceptance limits. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries which attributed to the RPD failures. The data were reported.

Sample	Analyte	Value
1206402141MS and 1206402142MSD (Non SDG 766871001)	Benzaldehyde	RPD 48* (0%-30%)

Miscellaneous Information

Manual Integrations
Sample (See Below) required manual integration to ensure proper identification of one or more peaks and/or correct baseline placement consistent with the calibration standard injections.

Sample	Analyte	Value
766977010 (MW-23)	Naphthalene	Result 18.2ug/L
	Nitrobenzene-d5	Result 256ug/L
	Phenanthrene	Result 3.5ug/L

Additional Comments
Diphenylamine Statement
Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Laboratory Control Sample (LCS) Recovery
The LCS and/or LCSD (See Below) did not meet spike recovery acceptance criteria. The failures are known to be poor responding analytes as stated per the Method. This may account for the low recoveries and the data were reported.

Sample	Analyte	Value
1206406105 (LCS)	4-Nitrophenol	21* (25%-69%)
	Hexachlorocyclopentadiene	25* (31%-64%)

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent difference (RPD) between the MS and MSD (See Below) did not meet acceptance limits. As the individual MS and MSD recoveries were within the acceptance limits, the failures had no adverse impact on the reported sample data.

Re: Liberty Steel VCC Sampling
Work Order: 769625

Dear Robert MacPhee:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 24, 2026. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 769625 in the left-hand footer of the data report. This package has been revised to add "Field Filtered" to the dissolved sample ID names.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4289.

Sincerely,

Caitlyn Mettetal for

Certificate of Analysis Report
for

GEEL003 GEL Engineering, LLC

Client SDG: 769625 GEL Work Order: 769625

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B The target analyte was detected in the associated blank.

E Concentration of the target analyte exceeds the instrument calibration range

J Value is estimated

P Organics--The concentrations between the primary and confirmation columns/detectors is >40% different. For HPLC, the difference is >70%.

Q ISO17025 / NELAC accredited; SC certification not held at time of analysis

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

h Preparation or preservation holding time was exceeded

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Julie Robinson.
