

Breathe Better B₂

Spare the Air and Track your Data!

Through the B2 Program, students can use PurpleAir Sensors to monitor fine particle pollution — including PM_{2.5}

PM_{2.5} particles are tiny — but they can have big impacts on your health

Using PurpleAir Monitors, Students can:

- » *Track real-time air quality data*
- » *Monitor PM_{2.5} levels in their community*
- » *Analyze air trends during different seasons and activities*
- » *Share findings with their school and local community*

Join B2 This Fall!

Schools, educators, and students are invited to enroll in the Breathe Better (B2) Program this fall and take an active role in improving air quality across our state.

Be part of a healthier, cleaner South Carolina.
