Columbia, South Carolina 29201

Subject: Semiannual Monitoring Report

Former Bramlette Manufactured Gas Plant  
400 East Bramlette Road  
Greenville, South Carolina VCC 16-5857-RP

Dear Mr. Cassidy:

On behalf of Duke Energy, please find enclosed two hard copies and one electronic copy on compact disk of the referenced report. The report is being submitted to support Remedial Investigation (RI) efforts associated with the referenced voluntary clean-up contract.

If you have any questions, please contact Rick Powell with Duke Energy at (980) 373-2663 or at [Richard.powell2@duke-energy.com](mailto:Richard.powell2@duke-energy.com).

All the best,

SynTerra

## **Semiannual Monitoring Report**

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

### **1.0 INTRODUCTION**

This Semiannual Monitoring Report was prepared for the former Bramlette Manufactured Gas Plant (MGP or Site) on behalf of Duke Energy Carolinas, LLC (Duke Energy). The Site collectively refers to the location of the former MGP (400 East Bramlett Road in Greenville, South Carolina), as well as four other contiguous parcels and the western portion of the parcel owned by Legacy School Properties, LLC, (**Figure 1-1**).

Groundwater monitoring activities occurred from 2003 to 2016, when Voluntary Cleanup Contract (VCC) 16-5857-RP between the South Carolina Department of Health and Environmental Control (SCDHEC) and Duke Energy was executed. Since then, substantial Remedial Investigation (RI) activities have been completed to satisfy requirement 3.B of the VCC. Findings from those investigations were summarized in a Remedial Investigation (RI) Report dated June 26, 2020 (which was approved by SCDHEC on September 1, 2020) and a subsequent RI Report Addendum dated July 29, 2021.

This report summarizes semiannual groundwater and surface water monitoring activities that occurred from December 5, 2020, to June 30, 2021. Semiannual monitoring activities are not required by the VCC; however, Duke Energy has performed these activities to evaluate observed trends and to help inform the evaluation of potential remedial alternatives. These data will also be used to help develop and establish a long-term monitoring plan, which will be included in a Record of Decision (ROD). SynTerra conducted and documented these monitoring events in accordance with the RIWP Addendum approved by SCDHEC August 6, 2019, and the September 2018 *Quality Assurance Project Plan (QAPP)* (SynTerra, 2018).

## Semiannual Monitoring Report

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

## 2.0 SITE LOCATION AND TOPOGRAPHY

The former Bramlette MGP is located at 400 East Bramlett Road in Greenville, South Carolina, approximately two miles northwest of downtown Greenville. The Site, approximately 35 acres, is comprised of five parcels owned by CSX Transportation (CSXT) and the western portion of one parcel owned by Legacy School Properties, LLC, (**Figure 1-1** and **Figure 2-1**). The Site is generally bounded by the CSXT railroad corridor to the north, west, and south, and by West Washington Street, Legacy Charter Elementary School, and the City of Greenville Sanitation Department to the east. The Reedy River and Swamp Rabbit Trail form the western boundary (**Figure 2-1**).

Topography is relatively flat and low-lying and includes delineated wetlands. Parcel 2, Parcel 3, Parcel 4, and Parcel 5 are located within the 100-year flood plain of the Reedy River (**Figure 2-1**). Parcel 1 is relatively flat and gently sloping from the north (938 feet) to south (932 feet). The debris piles on Parcel 2 (946 feet) and the Vaughn Landfill on Parcel 3 (942 feet) are the points of highest elevation. Parcel 4 and Parcel 5 are generally flat, with topographic elevations that range from 920 feet to 925 feet. Elevations are referenced to the North American Vertical Datum of 1988 (NAVD 88).

The Site is located within the Piedmont Physiographic Province, which is bound to the west by the Blue Ridge and to the east by the Sandhills and Coastal Plain. In general, the geology of the Piedmont is comprised of a regolith-fractured rock system including regolith, a transition zone, and bedrock (Harned and Daniel, 1992). A conceptual model of groundwater flow in the Piedmont assumes a regolith and bedrock drainage basin with a perennial stream system (Harned and Daniel, 1992.). Groundwater is recharged by drainage and rainfall infiltration in the upland areas, followed by discharge to the perennial stream system. Flow in the regolith is like that of porous media, while flow in bedrock is primarily within secondary porosity features (fractures).

Surface water features within and adjacent to the Site include drainage ditches, wetlands, and the Reedy River. The surface water elevation within the Reedy River, adjacent to the Site, ranges from 920 feet (north) to 916 feet (south). Observations from extensive soil coring within the bounds of the floodplain confirmed the presence of alluvial deposits, including a laterally extensive coarse sand deposit with trace rounded gravel. Because most of the Site is within a 100-year flood plain, man-made drainage ditches were presumably constructed to improve drainage on the five parcels. Those ditches were present during MGP operations; therefore, they are an important aspect of the conceptual site model.

## Semiannual Monitoring Report

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

### 3.0 MONITORING ACTIVITIES

Groundwater and surface water monitoring activities were performed in accordance with Section 3.2 of the QAPP (SynTerra, 2018). Samples were managed and shipped under proper chain-of-custody protocols in accordance to Section 3.3 of the QAPP (SynTerra, 2018). Data review, verification, and validation was conducted in accordance with Section 6.0 of the QAPP (SynTerra, 2018) to identify deviations from the analytical methods, poor quality control (QC) results, and other potential problems that may compromise the potential uses of the data.

Monitoring activities conducted during this reporting period are summarized below:

Activity	Date
MW-49BR groundwater sampling	February and March 2021
Semiannual Monitoring	March 2021
Legacy Charter Elementary School surface water sampling	April 2021

#### 3.1 Monitoring Well Network

Geologic Exploration, Inc. constructed three groundwater monitoring wells during the reporting period under SCDHEC Monitoring Well Permit Approval MW-12613. Groundwater monitoring well construction details are summarized in **Table 3-1**.

- MW-49BR was constructed within the Vaughn Landfill to facilitate the bedrock aquifer performance test (**Figure 2-1**).
- MW-50S and MW-50TZ was constructed on CSXT property northeast of Parcel 5 to monitor groundwater near the Mountainview Baptist Church (**Figure 2-1**).

Groundwater monitoring well MW-2 was abandoned on June 20, 2020, at the request of ReWa to facilitate a sewer improvement project in the immediate vicinity. At this time, replacing the MW-2 monitoring well is not recommended based on the following information:

- Historical data from 2008 through 2019 indicate a decreasing trend for benzene and naphthalene in groundwater at the MW-2 location. Benzene and naphthalene concentrations from two sampling events in 2019 were less than the reporting limit.

## Semiannual Monitoring Report

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

- VOCs and SVOCs present in the transition and bedrock flow zones can be monitored at MW-2TZ and MW-2BR.

Boring logs, monitoring well construction forms, and monitoring well abandonment forms can be referenced in the RI Report Addendum dated July 29, 2021.

### **3.2** Groundwater Monitoring Activities

Groundwater samples were collected during an aquifer performance test and a routine semiannual monitoring event. The results of the aquifer performance test are presented in the RI Report Addendum dated July 29, 2021. Groundwater samples were collected from 68 of the 70 monitoring wells during the semiannual monitoring event. Trace thicknesses of non-aqueous phase liquid (NAPL) were measured in the sump of monitoring wells MW-3 and MW-20; therefore, groundwater samples were not collected from those wells for analysis.

Pace Analytical Services, LLC, (Pace), a SCDHEC-certified laboratory, analyzed the groundwater samples for the following analyses:

- Volatile organic compounds (VOCs) by U.S. Environmental Protection Agency (USEPA) Method 8260D
- Semivolatile organic compounds (SVOCs) by USEPA Method 8270E
- Total and dissolved iron and manganese (USEPA Method 600/7000 Series), total organic carbon (USEPA Method 9060A), total sulfate (USEPA Method 9036), total sulfide (USEPA Method 376)

### **3.3** Surface Water Monitoring Activities

Four surface water samples were collected from a ditch on the Legacy Charter Elementary School property - beginning at West Washington Street continuing downstream to the western side of Parcel 3 (SW-18, SW-19, SW-20, and SW-21) (**Figure 3-1**). Surface water samples were also collected from 17 established monitoring locations during the routine semiannual monitoring event (**Figure 3-1**).

The surface water samples were analyzed for the following analyses:

- VOCs by USEPA Method 8260D
- SVOCs by USEPA Method 8270E
- Total suspended solids (TSS) by USEPA Method SM 2540D-2011

**Semiannual Monitoring Report**

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

**3.4 Investigation-derived Waste (IDW) Management**

Purge water and decontamination water generated during groundwater monitoring activities were contained in 55-gallon drums or 275-gallon totes. VLS Recovery Services (VLS) transported the IDW to their facility for proper treatment and disposal. Waste manifests are included in **Appendix A**.

## 4.0 RESULTS

### 4.1 Direction of Groundwater Flow

Groundwater at the Site generally flows from the northeast to the southwest (from Parcel 1 toward the Reedy River). Potentiometric surface maps for the shallow zone (**Figure 4-1**), transition zone (**Figure 4-2**), and the bedrock zone (**Figure 4-3**) depict the relative gradient and direction of groundwater flow, as measured during March 2021. Depths to groundwater within the shallow, transition zone, and bedrock monitoring wells were measured from less than 1 foot below top of casing (btoc) to approximately 16 feet btoc. Depth to groundwater measurements and corresponding potentiometric-surface elevations are summarized in **Table 4-1**.

### 4.2 Vertical Hydraulic Gradients

Vertical hydraulic gradients were calculated (Driscoll, 1986) according to the following equation:

$$i_v = \frac{h_d - h_s}{L_v}$$

Where:

$i_v$  = the vertical hydraulic gradient

$h_d$  = the hydraulic head in the deep well in the nested well pair

$h_s$  = the hydraulic head in the shallow well in the nested well pair

$L_v$  = the vertical distance between the midpoint of the two well screens

Vertical gradients (unitless number) for well pairs at the Site are summarized in **Table 4-2**. Vertical gradients were generally neutral and ranged from -0.17 to 0.05. The results summarized in the hydrographs confirm relatively neutral vertical gradients and are included for MW-29 monitoring wells (**Figure 4-4**), Vaughn Landfill monitoring wells (**Figure 4-5**), MW-3 monitoring wells (**Figure 4-6**) and Reedy River and upgradient monitoring wells (**Figure 4-7**).

Potentiometric-surface fluctuations in all three flow zones correlate to precipitation events, indicating a groundwater recharge response. The potentiometric-surface data from wells located along the Swamp Rabbit Trail appeared to correlate to the data from the Reedy River manual staff gauge, indicating a hydraulic connection between the shallow flow system and the Reedy River. Based on the data included in the hydrographs, seasonal high potentiometric-surface elevations in these areas generally

## Semiannual Monitoring Report

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

occurred in the spring (February and March), and seasonal low potentiometric-surface elevations generally occurred in the fall (October and November).

### 4.3 Horizontal Hydraulic Gradients

Horizontal hydraulic gradients were calculated (Driscoll, 1986) for each flow zone by dividing the change in elevation between two points ( $h_1$  and  $h_2$ ) on separate potentiometric-surface contours along a groundwater-flow path by the distance between the two locations ( $x_1$  and  $x_2$ ), according to the following equation:

$$i_h = \frac{(h_2 - h_1)}{(x_2 - x_1)} = \frac{\Delta h}{\Delta l}$$

Where:

$i_h$  = horizontal gradient (feet per foot)

$h_1$  = potentiometric surface elevation at position 1

$h_2$  = potentiometric surface elevation at position 2

$x_2 - x_1 = \Delta l$  = distance between points  $h_1$  and  $h_2$  along the groundwater-flow path (feet)

$\Delta h$  = change in elevation between two points ( $h_1$  and  $h_2$ ) on separate potentiometric-surface contours

Horizontal hydraulic gradients were calculated for each flow zone within Parcel 1, Parcel 2, and Parcel 3, based on March 2021 groundwater elevation data (Table 4-3). The geometric mean of the horizontal hydraulic gradients for each flow zone were as follows:

- Shallow zone: 0.03 feet/foot
- Transition zone: 0.01 feet/foot
- Bedrock zone: 0.02 feet/foot

### 4.4 NAPL

NAPL accumulation in all monitoring wells was measured during the Site-wide groundwater sampling event using an oil-water interface probe. NAPL accumulation of 4.50 feet was measured at the bottom of open-borehole monitoring well MW-49BR. Approximately three gallons of NAPL was bailed from MW-49BR. Routine measurements of NAPL thickness over a seven-day period indicated NAPL was not

## Semiannual Monitoring Report

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

recovering in the well. Trace amounts of NAPL were observed at MW-3 and MW-20 during the semiannual monitoring event.

### 4.5 Groundwater

The current groundwater monitoring well network consists of 70 monitoring wells screened within three flow zones. Monitoring well construction details are summarized in **Table 3-1**. Field data sheets, which detail the field parameters at the time of sample collection, are included in **Appendix B**. Analytical lab reports for all media are included in **Appendix C**.

During the March 2021 monitoring event, geochemical parameters were analyzed in groundwater collected from select monitoring wells to determine if geochemical environments conducive to beneficial natural attenuation exist. A *Proposed Groundwater Attenuation Monitoring Sampling Matrix* is presented in **Appendix D**. Results are summarized in **Table 4-4**. Initial results were evaluated and presented in the RI Report Addendum dated July 29, 2021. A second round of attenuation monitoring is planned for September 2021 and those results will be used to further evaluate physical and chemical processes that are known to attenuate dissolved Site-related constituents in groundwater.

The results of monitored natural attenuation parameters will be presented in a subsequent Semiannual Monitoring Report and continued testing for natural attenuation parameters will be determined at that time.

#### Groundwater Analytical Results

Groundwater impacts from former operation of the Bramlette MGP are described below and summarized in **Table 4-5**. Groundwater monitoring well locations are shown on **Figure 2-1**.

##### Parcel 1

Groundwater impacts on Parcel 1 are limited in extent to shallow areas around former MGP operational structures. The maximum concentration of benzene (0.012 mg/L) was detected near the former relief gas holder (MW-7R) and the maximum concentration of naphthalene (0.198 mg/L) was detected near the former tar chambers (MW-36S). These concentrations are an order of magnitude less when compared to results from other Site parcels.

## **Semiannual Monitoring Report**

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

### ***Parcel 2***

Groundwater impacts on Parcel 2 are observed within the deeper flow zones. This is consistent with migration characteristics of dense non-aqueous phase liquids (DNAPL) that tend to migrate deeper with distance from the source area (Parcel 1). Specifically, the maximum concentration of benzene (1.6 mg/L) and naphthalene (1.75 mg/L) were detected in the groundwater sample collected from MW-29TZ. Concentrations of benzene and naphthalene in fractured bedrock at MW-29BR are less than the transition zone, although greater than their respective MCLs. No constituents were detected at concentrations greater than MCLs in groundwater samples from shallow monitoring wells on Parcel 2.

### ***Parcel 3***

Coal tar that migrated through stormwater conveyance ditches settled in the wetland and low-lying areas of Parcel 3 around the Vaughan Landfill, contributing to constituent mass in groundwater at the Site. Concentrations of benzene and naphthalene greater than MCLs were detected in the shallow, transition zone, and fractured bedrock flow zones (to a depth of 130 feet below land surface). Impacts were primarily detected beneath the Vaughn Landfill (MW-2TZ, MW-2BR, MW-3BR, MW-3BRL, MW-21BRL, MW-45BR, and MW-47BR). The maximum benzene concentration (1.25 mg/L) was detected at MW-2BR which is approximately 50 feet west of the Vaughn Landfill. The maximum concentration of naphthalene (2.06 mg/L) was detected at MW-3BR located in the northern portion of the Vaughn Landfill. Toluene concentrations greater than the MCL were detected in one sample from monitoring well MW-47BR (1.77 mg/L) located in the northern portion of the Vaughn Landfill.

Groundwater samples were not collected from shallow monitoring well MW-3 and transition zone well MW-20 due to the presence of DNAPL within the wells, although not at sufficient thickness to achieve a reliable measurement (0.01 feet).

### ***Parcel 4***

No constituents were detected at concentrations greater than laboratory reporting limits in samples collected from monitoring wells located on Parcel 4.

### ***Parcel 5***

There are no monitoring wells currently installed on Parcel 5. A shallow and transition zone monitoring well pair (MW-50S and MW-50TZ) is installed 250 feet upgradient adjacent to Mountainview Baptist Church. No constituents were detected at concentrations greater than laboratory reporting limits in groundwater samples from the MW-50 cluster.

## **Semiannual Monitoring Report**

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

### *Legacy Charter Elementary School*

No constituents were detected at concentrations greater than laboratory reporting limits in samples collected from monitoring wells located directly adjacent to Legacy Charter Elementary School (MW- MW-25R, MW-41S, MW-41TZ and MW-41BR). Groundwater analytical results indicate concentrations of benzene (0.011 mg/L) and naphthalene (0.938 mg/L) greater than MCLs in samples from shallow monitoring well MW-1 which is located near the northern end of the Vaughn Landfill.

### *Swamp Rabbit Trail and Reedy River*

Based on historical and recent analytical results, impacted groundwater does not appear to be migrating to the Reedy River. Constituent concentrations continue to be equal to or less than laboratory reporting limits in samples from monitoring wells installed adjacent to the Swamp Rabbit Trail and upgradient of the Reedy River (MW-30S, MW-30TZ, MW-31S, MW-31TZ, MW-32S, MW-32TZ, MW-33S, MW-33TZ, MW-48S, and MW-48TZ). Constituent concentrations in groundwater west of the Reedy River (MW-44TZ and MW-44BR) continue to be less than laboratory reporting limits.

### Mann-Kendall

Mann-Kendall trend analyses were conducted to determine whether benzene and naphthalene concentrations in groundwater exhibited a statistically significant increasing trend, decreasing trend, or no trend.

In a Mann-Kendall trend test, each value is compared to the proceeding values to calculate whether the value has increased, decreased, or stayed the same. These comparisons are recorded as simply 1 (increasing), -1 (decreasing), or 0 (stayed the same). These comparisons give an S value, where S indicates the type of trend. A negative S value indicates a decreasing trend, and a positive S value indicates an increasing trend. Whether or not these trends are statistically significant is dependent on the two-sided p value. A p value ranges from 0 to 1 and indicates whether the results are due to chance or the results are statistically significant. Greater p values indicate a trend is not statistically significant, and a p value less than 0.1 indicates a statistically significant trend.

Data must meet the following requirements for a Mann-Kendall trend test to be applicable:

- There must be at least four detect measurements.
- Non-detects must make up less than or equal to 50 percent of the measurements.

## Semiannual Monitoring Report

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

Historical groundwater data from all monitoring wells were evaluated to determine which data sets meet the minimum criteria for the completion of Mann-Kendall analysis. Based on the minimum data requirements, Mann-Kendall trend analyses were limited to data sets from five monitoring wells (MW-1, MW-2BR, MW-3, MW-3BR, and MW-21). **Table 4-6** details the data set suitability compared to minimum criteria. The Mann Kendall Trend Test Analysis is included as **Appendix E**.

Based on the Mann-Kendall analysis, there were no significantly increasing trends for benzene or naphthalene.

Limitations of the data set were primarily a result of the lack of detections of constituents in the samples. In addition, less than four samples have been collected from 50 monitoring wells constructed between 2018 and 2021. Data sets from seven additional groundwater monitoring wells will contain sufficient information for Mann-Kendall analysis after the next semiannual groundwater sampling event in September 2021.

### **4.6** Surface Water

Surface water samples were collected at 21 locations at the Site. Four samples were collected for the first time on Legacy Charter Elementary property (SW-18, SW-19, SW-20 and SW-21) (**Figure 3-1**). Surface water analytical results are summarized in **Table 4-7**. Field data sheets, which detail the field parameters at the time of sample collection, are included in **Appendix B**. Analytical lab reports for all media are included in **Appendix C**.

#### *Reedy River*

Analytical results for VOCs and SVOCs from Reedy River surface water samples continue to be less analytical laboratory reporting limits.

#### *Legacy Charter Elementary*

No constituents were detected at concentrations greater than the laboratory reporting limit in surface water samples collected from locations located on Legacy Charter Elementary property (SW-1, SW-2, SW-18, SW-19, SW-20, and SW-21).

#### *Parcel 3*

One constituent [benzo(a)pyrene] was detected at a concentration greater than the MCL in surface water sampled at one location (SW-5). Historically, benzo(a)pyrene concentrations in samples from SW-5 have been less than laboratory reporting limits.

**Semiannual Monitoring Report**

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

*Parcel 4 and 5*

VOCs and SVOCs in samples collected downstream of the Vaughn Landfill continued to be less than screening criteria. These include samples collected along the centerline of Ditch 4 (Parcel 3, Parcel 4, and Parcel 5).

## Semiannual Monitoring Report

Duke Energy Carolinas, LLC - Former Bramlette MGP Site  
Greenville, SC

---

## 5.0 FINDINGS AND RECOMMENDATIONS

Groundwater samples collected from monitoring-well nests near and upgradient of the Reedy River do not contain MGP related constituents greater than MCLs. Most dissolved-phase constituent mass was detected in the transition zone and fractured-bedrock zone in the following areas:

- Parcel 1 – shallow zone
- Parcel 2 and Parcel 3 – shallow, transition, and fractured bedrock

Constituents were not detected in groundwater samples collected from monitoring wells on Parcels 4 and 5 and near the Reedy River.

Mann-Kendall analyses indicate stable or decreasing concentrations within the most impacted areas of groundwater. These findings suggest an attenuating or stable plume.

MGP-related constituent concentrations greater than analytical reporting limits were not detected in the Reedy River. VOCs and SVOCs in surface water were limited to the ditches and wetlands near the Vaughn Landfill where accumulated coal tar was observed. Constituent concentrations continued to be less than screening criteria downstream of the Vaughn Landfill to the point of discharge at the Reedy River. Hydraulic monitoring data and surface water analytical results indicate impacted groundwater is not likely discharging to wetland areas or stormwater conveyance ditches.

Continued semiannual groundwater and surface water monitoring are planned at this time. A combined semiannual groundwater and surface water monitoring event is planned for September 2021.

NAVD 88 - North American Vertical Datum 1988

Vertical hydraulic gradients (Driscoll, 1986) according to the following equation:

$$i_v = \frac{h_d - h_s}{L_v}$$

Where:

$i_v$  = the vertical hydraulic gradient

$h_d$  = the hydraulic head in the deep well in the nested well pair

$h_s$  = the hydraulic head in the shallow well in the nested well pair

$L_v$  = the vertical distance between the midpoint of the two well screens

Notes:

<sup>1</sup> Potentiometric surface elevation shown corresponds to upgradient groundwater contour on Figures 4-1 through 4-3.

<sup>2</sup> Potentiometric surface elevation shown corresponds to downgradient groundwater contour on Figures 4-1 through 4-3.

<sup>3</sup> Value is the geometric mean of hydraulic conductivities measured in site monitoring wells.

<sup>4</sup> The length of a flow path between an upgradient and downgradient groundwater contour within the same flow zone.

<sup>5</sup>  $n_e$  is an assumed effective porosity

<sup>6</sup> constituent velocity calculated as the seepage velocity devided by the retardation factor; the retardation factor was calculated using  $K_d$ , bulk density ( $\rho_d$ ), and  $n_e$

<sup>7</sup> partition coefficients calculated using the fraction organic carbon measured from samples collected from the shallow zone

<sup>8</sup>  $K_d$  values could not be estimated for Benzene and Naphthalene because fraction organic carbon values are not available

<sup>9</sup> constituent velocity assumed to equal the groundwater seepage velocity because  $K_d$  values could not be estimated and igneous and metamorphic rocks generally have greatly reduced fraction organic carbon and demonstrate limited retardation (ITRC, 2017)

ft - feet

h - potentiometric surface height in feet-NAVD 88

NAVD 88 - North American Vertical Datum 1988

yr - year

l - horizontal distance between two points on separate potentiometric surface contours along the groundwater-flow path

$\Delta h$  - difference in potentiometric surface elevation between upgradient and downgradient potentiometric surface contours

$\Delta l$  - horizontal distance between two points on separate potentiometric surface contours (upgradient and downgradient) along the groundwater-flow path

$\Delta h/\Delta l$  - horizontal hydraulic gradient (ft/ft)

Horizontal gradients (Driscoll, 1986) for each flow zone were calculated according to the following equation:

K - horizontal hydraulic conductivity

$n_e$  - effective porosity

$v_s$  - horizontal seepage velocity

$K_d$  - calculated by multiplying the constituent Koc by the fraction organic carbon value

retardation factor -  $1 + (K_d * \rho_d) / n_e$

Benzene Koc - 62 (L/Kg)

Naphthalene Koc - 1191 (L/Kg)

Koc - organic carbon-water partitioning coefficient

fraction organic carbon for shallow zone - 0.004

bulk density ( $\rho_d$ ) - 1.7 (Kg/L)

L/Kg - liters per kilogram

Kg/L - kilograms per liter

**Notes:**

- Red shading indicates that the monitoring well is screened in the shallow zone

- Green shading indicates that the monitoring well is screened in the transition zone

- Yellow shading indicates that the monitoring well is screened in the bedrock zone

**Bold** type indicates that the compound was detected at a concentration greater than the adjusted method detection limit.

^ - Sample analyzed by EPA Method 8260D

< - Concentration not detected at or above the adjusted reporting limit.

bls - below land surface

Deg C - degrees Celsius

ft - feet

j - Estimated concentration above the adjusted method detection limit and less than the adjusted reporting limit.

M1 - Matrix spike recovery was high: the associated Laboratory Control Spike (LCS) was acceptable.

µmhos/cm - micromhos per centimeter

mg/L - milligrams per liter

mV - millivolts

NTUs - Nephelometric Turbidity units

S.U. - standard units

Notes:

This table summarizes only constituents detected at concentrations greater than the method detection limit.

- Yellow shading indicates that the compound was detected above a potentially applicable regulatory standard listed in Section 4.11 of the RIWP-A

Bold type indicates that the compound was detected at a concentration greater than the adjusted method detection limit.

t - Risk Based Screening Level (RBSL) referenced in Appendix D, Table 1 of the South Carolina Department of Environmental Health and Control (SCDHEC) Quality Assurance Program Plan for the Underground Storage Tank (UST) Management Division.

< - Concentration not detected at or greater than the adjusted reporting limit.

^ - Sample was analyzed by EPA Method 8260d.

\* - Sample was analyzed by EPA Method 8260.

Deg C - degrees Celsius

ft - feet

µmhos/cm - micromhos per centimeter

mg/L - milligrams per liter

mV - millivolts

NA - not analyzed

NE - No screening level established at this time. A site-specific risk-based screening level may be established as part of the risk assessment process outlined in Section 5.0 of the RIWP-A.

NM - not measured

NTUs -Nephelometric Turbidity Units

PAH - Polycyclic aromatic hydrocarbon

SCDHEC R. 61-58 - South Carolina Department of Health and Environmental Control Regulation 61-58.

S.U. - standard units

SVOC - Semi-volatile organic compounds

VOA - Volatile organic aromatics

VOC - Volatile organic compounds

3g - Due to matrix interference, achieving a constant weight is not possible.

B - Target analyte detected in method blank at or greater than the reporting limit. Target analyte concentration in sample is less than 10X the concentration in the method blank. Analyte concentration in sample could be due to blank contamination.

C8 - Result may be biased high due to carryover from previously analyzed sample.

H1 - Analysis conducted outside the EPA method holding time.

H2 - Extraction or preparation was conducted outside of the recognized method holding time.

H3 - Sample was received or analysis requested beyond the recognized method holding time.

IK - The recalculated concentration of the calibration standard(s) did not meet method acceptance criteria: this result should be considered an estimated value.

j - Estimated concentration above the adjusted method detection limit and less than the adjusted reporting limit.

L1 - Analyte recovery in the laboratory control sample was above quality control limits. Results may be biased high.

L2 - Analyte recovery in the laboratory control sample was below quality control limits. Results for this analyte in associated samples may be biased low.

M0 - Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 - Matrix spike recovery was high: the associated Laboratory Control Spike (LCS) was acceptable.

MS - Analyte recovery in the matrix spike was outside quality control limits for one or more of the constituent analytes used in the calculated result.

RO - The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.

R1 - Relative Percent Difference value was outside control limits.

S1 - Data review findings indicate result may be biased, however, data is usable.

v1 - The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

v2 - The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

v3 - The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have low bias.

H3 - Sample was received or analysis requested beyond the recognized method holding time.

IK - The recalculated concentration of the calibration standard(s) did not meet method acceptance criteria; this result should be considered an estimated value.

J - Estimated concentration above the adjusted method detection limit and less than the adjusted reporting limit.

L1 - Analyte recovery in the laboratory control sample was above quality control limits. Results may be biased high.

L2 - Analyte recovery in the laboratory control sample was below quality control limits. Results for this analyte in associated samples may be biased low.

MO - Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 - Matrix spike recovery was high: the associated Laboratory Control Spike (LCS) was acceptable.

MS - Analyte recovery in the matrix spike was outside quality control limits for one or more of the constituent analytes used in the calculated result.

R0 - The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.

R1 - Relative Percent Difference value was outside control limits.

S1 - Data review findings indicate result may be biased, however, data is usable.

v1 - The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

v2 - The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

v3 - The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have low bias.

Prepared by: RSB      Checked by: PPB/JPC

Notes:

This table summarizes only constituents detected at concentrations greater than the method detection limit.

- Yellow shading indicates that the compound was detected above a potentially applicable regulatory standard listed in Section 4.11 of the RIWP-A

Bold type indicates that the compound was detected at a concentration greater than the adjusted method detection limit.

t - Risk Based Screening Level (RBSL) referenced in Appendix D, Table 1 of the South Carolina Department of Environmental Health and Control (SCDHEC) Quality Assurance Program Plan for the Underground Storage Tank (UST) Management Division.

< - Concentration not detected at or greater than the adjusted reporting limit.

^ - Sample was analyzed by EPA Method 8260d.

\* - Sample was analyzed by EPA Method 8260.

Deg C - degrees Celsius

ft - feet

µmhos/cm - micromhos per centimeter

mg/L - milligrams per liter

mV - millivolts

NA - not analyzed

NE - No screening level established at this time. A site-specific risk-based screening level may be established as part of the risk assessment process outlined in Section 5.0 of the RIWP-A.

NM - not measured

NTUs - Nephelometric Turbidity Units

PAH - Polycyclic aromatic hydrocarbon

SCDHEC R. 61-58 - South Carolina Department of Health and Environmental Control Regulation 61-58.

S.U. - standard units

SVOC - Semi-volatile organic compounds

VOA - Volatile organic aromatics

VOC - Volatile organic compounds

3g - Due to matrix interference, achieving a constant weight is not possible.

B - Target analyte detected in method blank at or greater than the reporting limit. Target analyte concentration in sample is less than 10X the concentration in the method blank. Analyte concentration in sample could be due to blank contamination.

C8 - Result may be biased high due to carryover from previously analyzed sample.

H1 - Analysis conducted outside the EPA method holding time.

H2 - Extraction or preparation was conducted outside of the recognized method holding time.

H3 - Sample was received or analysis requested beyond the recognized method holding time.

IK - The recalculated concentration of the calibration standard(s) did not meet method acceptance criteria; this result should be considered an estimated value.

j - Estimated concentration above the adjusted method detection limit and less than the adjusted reporting limit.

L1 - Analyte recovery in the laboratory control sample was above quality control limits. Results may be biased high.

L2 - Analyte recovery in the laboratory control sample was below quality control limits. Results for this analyte in associated samples may be biased low.

M0 - Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 - Matrix spike recovery was high: the associated Laboratory Control Spike (LCS) was acceptable.

MS - Analyte recovery in the matrix spike was outside quality control limits for one or more of the constituent analytes used in the calculated result.

R0 - The data are unusable. The sample results are rejected due to serious deficiencies in meeting quality control criteria. The analyte may or may not be present in the sample.

R1 - Relative Percent Difference value was outside control limits.

S1 - Data review findings indicate result may be biased, however, data is usable.

v1 - The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

v2 - The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

v3 - The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have low bias.

Prepared by: PPB      Checked by: RSB / JPC

**Notes:**

This table summarizes only constituents detected at concentrations greater than the method detection limit.

- Bold highlighted concentrations indicate that the compound was detected at a concentration greater than the SCDHEC R.61-68 Human Health MCLs.

Bold type indicates that the compound was detected at a concentration greater than the adjusted method detection limit.

† - Risk Based Screening Level (RBSL) referenced in Appendix D, Table 1 of the South Carolina Department of Environmental Health and Control (SCDHEC) Quality Assurance Program Plan for the Underground Storage Tank (UST) Management Division.

< - Concentration not detected at or above the adjusted reporting limit.

\* - In instances where the reporting limit is greater than the comparative regulatory criteria, the non-detected value is reported as less than the maximum detection limit.

^ - Sample was analyzed by EPA Method 8260D

Deg C - degrees Celsius

ft - feet

j - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

L1 - Analyte recovery in the laboratory control sample was above quality control limits. Results may be biased high.

MCLs - Maximum Contaminant Levels

mg/L - milligrams per liter

mV - millivolts

µhos/cm - micromhos per centimeter

NE - No screening level established at this time. A site-specific risk-based screening level may be established as part of the risk assessment process outlined in Section 5.0 of the RIWP-A.

NTUs - Nephelometric Turbidity Units

PAH - polycyclic aromatic hydrocarbon

R1 - Relative Percent Difference value was outside control limits.

S.U. - standard units

SCDHEC R.61-68 - South Carolina Department of Health and Environmental Control Regulation 61-68.

SVOCs - Semi-volatile organic compounds

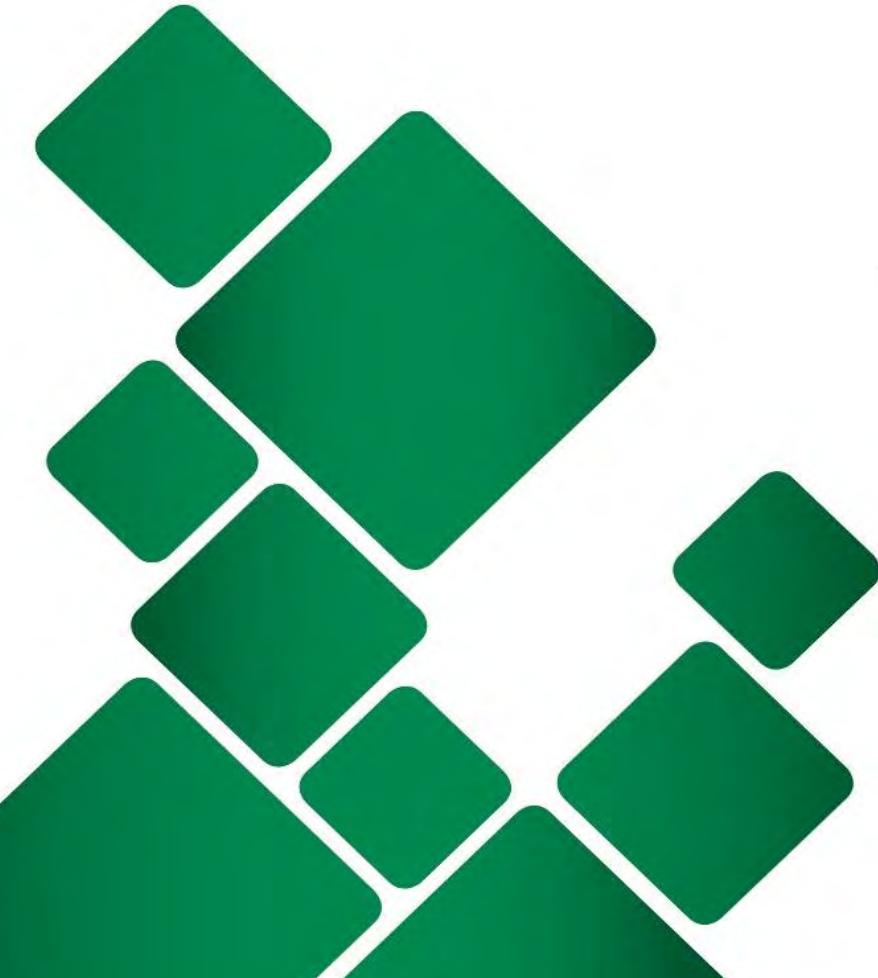

VOC - Volatile organic compounds

## Coronavirus ("COVID-19") Safety Precaution Certification for Duke Energy Site Entry

For a group of visitors from a single company, the Duke Energy Host should read the questions below to the visitors who do not have a Duke Energy badge. The visitors must sign this questionnaire form each business day they visit a Duke Energy facility. The visitor is responsible for notifying their Duke Energy point of contact if they begin to show symptoms of COVID-19 or are diagnosed with COVID-19 within 14 days following their visit.

1. Have you or any member of your household visited a country outside the United States, OR traveled to an area in the U.S. that is/was under a CDC domestic travel advisory or state advisory at the time of travel within 14 days of arriving at a Duke Energy facility, whether for business or personal purposes? Follow state guidelines where they are more restrictive.  
 YES\*  NO \*If any visitor answers "YES" please refer to Job Aid for next steps
2. To the best of your knowledge, have you been in contact (physical contact of 6 feet or less for greater than 3 minutes) with anyone who has traveled outside the United States, OR traveled to an area in the U.S. that is/was under a CDC domestic travel or state advisory at the time of travel within 14 days of arriving at a Duke Energy facility, whether for business or personal purposes? Follow state guidelines where they are more restrictive.  
 YES\*  NO \*If any visitor answers "YES" please refer to Job Aid for next steps
3. To the best of your knowledge, have you been in close contact (6 feet or less) with anyone that has tested positive for COVID-19 or is suspected of having COVID-19, within the past 14 days?  
 YES\*  NO \* If any visitor answers "YES" please refer to Job Aid for next steps
4. Do you have a fever, cough, or shortness of breath at this time, or have you had these symptoms in the last 14 days?  
 YES\*  NO \* If any visitor answers "YES" please refer to Job Aid for next steps
5. Please confirm you have been instructed in the following hygiene practices designed to inhibit the spread of the COVID-19:
  - Wash hands often with soap and water for at least 20 seconds. If soap and water are not available, use an alcohol-based hand sanitizer that contains at least 60% alcohol.
  - Avoid touching your eyes, nose, and mouth with unwashed hands.
  - Avoid close contact with people who are sick.
  - Cover a cough or sneeze with a tissue, then throw the tissue in the trash.
  - Clean and disinfect frequently touched objects and surfaces.
  - Stay at home when sick and seek appropriate medical care. YES  NO\* \* If any visitor answers "NO" please refer to Job Aid for next steps

**CAUTION:** Individuals should not enter Duke Energy facilities if they are experiencing any symptoms of a respiratory illness (fever, cough, shortness of breath, or other flu-like symptoms).

Visiting Company	SynTerra, Duke Energy
Date	3 / 23 / 2021
Duke Energy Location	Bramlette MGP - Greenville, SC
Duke Energy Host First and Last Name	Richard Powell

\*\* To be completed by Duke Energy Host

Duke Energy Host, please scan and e-mail this form to [VisitorQuestionnaire@Duke-Energy.com](mailto:VisitorQuestionnaire@Duke-Energy.com) within 3 business days.

## Coronavirus (“COVID-19”) Safety Precaution Certification for Duke Energy Site Entry

By signing below, the visitor acknowledges that they have responded honestly to their host's verbal questions about their recent travel, COVID exposure, any COVID symptoms and will follow required hygiene and social distancing instructions outlined in item 5 above.

Visitor Name	Visitor Job Title	Visitor Signature	** Allowed Entry (Yes/No)
Wesley Parker	Project Scientist		Yes
Ryan Badum	Project Scientist		Yes
Greg Darnell	Staff Professional II		Yes

**\*\* To be completed by Duke Energy Host  
Duke Energy Host, please scan and e-mail**

**Duke Energy Host**, please scan and e-mail this form to [VisitorQuestionnaire@Duke-Energy.com](mailto:VisitorQuestionnaire@Duke-Energy.com) within 3 business days.

## Instrument Calibration Log

SynTerra Corporation  
148 River Street, Suite 220  
Greenville, South Carolina 29601

SC pH Certification No. 23614

Instrument ID: YSI Professional Plus  
Serial #: 17F101514  
Analyst: GSD

Date: 3-23-21  
Sample Location: Bramlette

### pH Initial Calibration (standard units)

Method: SM 4500 H+ B-2011

Calibrated at SynTerra Office - SC Certified Laboratory for pH

Cal. Time	Cal. Buffer (4.0)	Cal. Buffer (7.0)	Cal Buffer (10.0)	Check Buffer Measured Value
0628	4	7	10	7.06

\*pH buffer checks are to be within  $\pm 0.1$  pH units of the standards true value

4 Buffer Reference: 403

10 Buffer Reference: 404

7 Buffer Reference: 415

Check Buffer Reference: 407

### pH Calibration Check (standard units)

Time	Check Buffer True Value	*Check Buffer Measured Value
Mid-Day	7.0	
End-of-Day	7.0	7.08
Other		

\*pH buffer checks are to be within  $\pm 0.1$  pH units of the standards true value

Check Buffer Reference: 407 Action Required:

### Specific Conductance (umhos/cm)

Reference Method: SW846 9050A

Time	Calibration Standard True Value	Verification standard Measured Value
Initial Cal	1409	1421
Mid-Day	1409	
End-of-Day	1409	1417

\*Verification standard  $\pm 10$  percent of the standards true value

Calibration Standard Reference: 411 Verification Standard Reference: 410

### Dissolved Oxygen (mg/L)

Reference Method: SM 4500 O G-2001

	Time	Temp °C	Barometric Pressure (mm Hg)	Meter DO Reading (mg/L)	Correction Factor	DO at Temperature (mg/L)	Theoretical DO (mg/L)
Initial*	0638	19	751	9.23	.99	9.28	9.18
Mid-Day							
End-of-Day	1722	21	750	8.97	.99	8.92	8.83

\*Initial meter calibration  
Theoretical DO = DO from "Dissolved Oxygen Meter Calibration Verification" Table at ambient temp X Correction Factor at Barometric Pressure  
Theoretical DO and Meter DO reading within  $\pm 0.5$  mg/l, if not recalibrate meter.

**Daily Sampling Check List**

SynTerra Corporation  
148 River Street, Suite 220  
Greenville, South Carolina 29601

Checklist completed by: GSD

Site Name:

Date:

Field Lead:

Bramlette  
3-23-21  
GSD**General Sampling Check**

- 1 What type of samples were taken? (soil, GW, SW, WW)
- 2 What Sampling Program(s) were sampled for? (i.e., CCR, CAMA, NPDES, SOC)
- 3 Have samples been compared to original sampling list?
- 4 Correct bottleware for Sample Program?
- 5 Were appropriate field logs completed for each sample?
- 6 Were all parameters written to correct significant figures? (i.e., pH (X.XX), Turbidity (X.X), etc.)
- 7 End of Day Calibration within tolerance?

GW  
Semi Annual GW

<input checked="" type="radio"/> Y	N

*If no, which parameters:***Chain of Custody**

- 1 Correct Site Name on COC?
- 2 Site Programs by Station indicated on the COC (Abbreviation Code and Source Area)?
- 3 Do Chain of Custody and bottleware match? (i.e., Sample ID, Date, Time)?
- 4 Are all bottles labeled with correct sample ID's, Date and Time?
- 5 Were parameters written on COC as needed? (i.e., TEMP, pH, Turb, Flow, etc.)?
- 6 Parameters indicated for Analysis on the COC match the bottleware?
- 7 Samplers Initials/signature indicated on the COC?
- 8 Turnaround Time indicated on the COC?
- 9 Picture of Chain Of Custody taken?

<input checked="" type="radio"/> Y	N

**Sample Cooler**

- 1 Were sample coolers filled completely with ice if needed?
- 2 If low-level mercury samples collected, confirm samples are double bagged and not submerged in ice.
- 3 Glass containers separated in plastic bags/bubble wrap to prevent breakage?
- 4 Custody Seal present?

<input checked="" type="radio"/> Y	N

## Instrument Calibration Log

SynTerra Corporation  
148 River Street, Suite 220  
Greenville, South Carolina 29601

SC pH Certification No. 23614

Instrument ID: YSI Professional Plus

Serial #: 17F104348

Analyst: Tyler Wyatt

Date: 3-31-21

Sample Location: Brantlett MGP

### pH Initial Calibration (standard units)

Method: SM 4500 H+ B-2011

Calibrated at SynTerra Office - SC Certified Laboratory for pH

Cal. Time	Cal. Buffer (4.0)	Cal. Buffer (7.0)	Cal Buffer (10.0)	Check Buffer Measured Value
0813	4.0	7.01	10.02	7.02

\*pH buffer checks are to be within  $\pm 0.1$  pH units of the standards true value

4 Buffer Reference: 403

10 Buffer Reference: 404

7 Buffer Reference: 407

Check Buffer Reference: 415

### pH Calibration Check (standard units)

Time	Check Buffer True Value	*Check Buffer Measured Value
Mid-Day	7.0	
End-of-Day	7.0	7.07
Other		

\*pH buffer checks are to be within  $\pm 0.1$  pH units of the standards true value

Check Buffer Reference: 415

Action Required:

NONE

### Specific Conductance (umhos/cm)

Reference Method: SW846 9050A

Time	Calibration Standard True Value	Verification standard Measured Value
Initial Cal	1409	1391
Mid-Day	1409	
End-of-Day	1409	1419

\*Verification standard  $\pm 10$  percent of the standards true value

Calibration Standard Reference: 410

Verification Standard Reference: 411

### Dissolved Oxygen (mg/L)

Reference Method: SM 4500 O G-2001

	Time	Temp °C	Barometric Pressure (mm Hg)	Meter DO Reading (mg/L)	Correction Factor	DO at Temperature (mg/L)	Theoretical DO (mg/L)
Initial*	0830	18	738	9.04	0.97	9.47	9.18
Mid-Day							
End-of-Day	1325	19.5	737	9.37	0.97	9.18	8.90

\*Initial meter calibration

Theoretical DO = DO from "Dissolved Oxygen Meter Calibration Verification" Table at ambient temp X Correction Factor at Barometric Pressure  
Theoretical DO and Meter DO reading within  $\pm 0.5$  mg/l, if not recalibrate meter.

## **Coronavirus (“COVID-19”) Safety Precaution Certification for Duke Energy Site Entry**

### **JOB AID**

1. Please get the latest form by going to the main portal page and clicking on Updates on the company's COVID-19 preparations. In the middle of the page under “More Information” you will find the “Coronavirus (“COVID-19”) Safety Precaution Certification for Duke Energy Site Entry” form link.

*Please refer to the CDC Level 3 country list (link) <https://wwwnc.cdc.gov/travel/notices>*

*Please refer to the CDC Domestic Travel Advisory: <https://www.cdc.gov/coronavirus/2019-ncov/travelers/travel-in-the-us.html>*

2. This form must be completed by external visitors to Duke Energy facilities who do not have a Duke Energy badge.
3. This form will be available to visitors at Security / reception desks at all Duke Energy facilities. For facilities without security officers, business unit Administrative Assistants should work with building occupants to make sure anyone that meets the above criteria completes the form and meets the access criteria below prior to entering the building.
4. To grant access to Duke Energy facilities, the entire form must be completed AND question 1 and 2 cannot contain a CDC Level 3 country (see link above), OR traveled to an area in the U.S. that is/was under a CDC domestic travel advisory or state advisory at the time of travel within 14 days of arriving at a Duke Energy facility, whether for business or personal purposes (follow state guidelines where they are more restrictive), AND questions 3 and 4 must be answered with a “NO” AND question 5 must be answered with a “YES”.
5. If a visitor declines to complete the form, they are not allowed access to the Duke Energy facility.
6. If a visitor is denied access due to #4 or #5 above, consider rescheduling the meeting with the visitor via video or teleconference at a future date.
7. If a visitor has been denied access and refuses to leave, efforts should be made to encourage a voluntary resolution. If the issues cannot be resolved, the Enterprise Security Command Center should be contacted at (800) 951-9924.
8. These forms should be treated as confidential. The Duke Energy Host should e-mail completed forms to Enterprise Protective Services at [VisitorQuestionnaire@Duke-Energy.com](mailto:VisitorQuestionnaire@Duke-Energy.com).
9. Emergency responders (LE, Fire, EMS, etc.) are granted an exception to this process if they are visiting a Duke Energy facility to respond to an emergency.

## Coronavirus ("COVID-19") Safety Precaution Certification for Duke Energy Site Entry

Visitors to Duke Energy facilities who do not have a Duke Energy badge are required to complete the COVID-19 questionnaire. This form must be completed for each visitor each business day they visit a Duke Energy facility. The visitor is responsible for notifying their Duke Energy point of contact if they begin to show symptoms of COVID-19 or are diagnosed with COVID-19 within 14 days following their visit.

1. Have you or any member of your household visited a country outside the United States OR traveled to an area in the U.S. that is/was under a CDC domestic travel advisory or state advisory at the time of travel within 14 days of arriving at a Duke Energy facility, whether for business or personal purposes? Follow state guidelines where they are more restrictive.

YES\*  NO If YES, what country/state/city? \_\_\_\_\_ Return date: \_\_\_\_\_

\*If YES please refer to Job Aid on reverse side of this form for next steps

2. To the best of your knowledge, have you been in contact (physical contact of 6 feet or less for greater than 3 minutes) with anyone who has traveled outside the United States, OR traveled to an area in the U.S. that is/was under a CDC domestic travel advisory or state advisory at the time of travel within 14 days of arriving at a Duke Energy facility, whether for business or personal purposes? Follow state guidelines where they are more restrictive.

YES\*  NO If YES, what country/state/city? \_\_\_\_\_ Return date: \_\_\_\_\_

\*If YES please refer to Job Aid on reverse side of this form for next steps

3. To the best of your knowledge, have you been in contact (physical contact of 6 feet or less) with anyone that has tested positive for COVID-19 or is suspected of having COVID-19, within the past 14 days?

YES\*  NO \*If YES please refer to Job Aid on reverse side of this form for next steps

4. Do you have a fever, cough, or shortness of breath at this time, or have you had these symptoms in the last 14 days?

YES\*  NO \*If YES please refer to Job Aid on reverse side of this form for next steps

5. Please confirm, by reading the list below, you have been instructed in the following hygiene practices designed to inhibit the spread of the COVID-19:

YES  NO\* \*If NO please refer to Job Aid on reverse side of this form for next steps

- Wash hands often with soap and water for at least 20 seconds. If soap and water are not available, use an alcohol-based hand sanitizer that contains at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Cover a cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces.
- Stay at home when sick and seek appropriate medical care.

**CAUTION:** Individuals should not enter Duke Energy facilities if they are experiencing any symptoms of a respiratory illness (fever, cough, shortness of breath, or other flu-like symptoms).

Visiting Company	SYNTERRA
Visitor First and Last Name	LEE DRAGO
Visitor Title	SCIENTIST
Signature	
Date	03/31/2021
Duke Energy Location	BRAMLETTE
Duke Energy Host First and Last Name	RICIA POWELL
** Allowed Entry (Yes / No)	

\*\* To be completed by Duke Energy Host

Duke Energy Host, please scan and e-mail this form to [VisitorQuestionnaire@Duke-Energy.com](mailto:VisitorQuestionnaire@Duke-Energy.com) within 3 business days.

## Instrument Calibration Log

SynTerra Corporation  
148 River Street, Suite 220  
Greenville, South Carolina 29601

SC pH Certification No. 23614

Instrument ID: YSI Professional Plus  
Serial #: 17F104348  
Analyst: WTP

Date: 4/5/2021  
Sample Location: Bramlette

### pH Initial Calibration (standard units)

Method: SM 4500 H+ B-2011

Calibrated at SynTerra Office – SC Certified Laboratory for pH

Cal. Time	Cal. Buffer (4.0)	Cal. Buffer (7.0)	Cal Buffer (10.0)	Check Buffer Measured Value
0848				7.03

\*pH buffer checks are to be within  $\pm 0.1$  pH units of the standards true value

4 Buffer Reference: 405

10 Buffer Reference: 1026?

7 Buffer Reference: 407

Check Buffer Reference: 1027

### pH Calibration Check (standard units)

Time	Check Buffer True Value	*Check Buffer Measured Value
Mid-Day	7.0	
End-of-Day	7.0	7.03
Other		

\*pH buffer checks are to be within  $\pm 0.1$  pH units of the standards true value

Check Buffer Reference: 407 Action Required: None

### Specific Conductance (umhos/cm)

Reference Method: SW846 9050A

Time	Calibration Standard True Value	Verification standard Measured Value
Initial Cal	1409	1424
Mid-Day	1409	
End-of-Day	1409	1408

\*Verification standard  $\pm 10$  percent of the standards true value

Calibration Standard Reference: 417 Verification Standard Reference: 1085

### Dissolved Oxygen (mg/L)

Reference Method: SM 4500 O G-2001

	Time	Temp °C	Barometric Pressure (mm Hg)	Meter DO Reading (mg/L)	Correction Factor	DO at Temperature (mg/L)	Theoretical DO (mg/L)
Initial*	8100	15.5	740.7	10.15 wtp	0.975	9.98	10.379.73
Mid-Day				10.12			wtp
End-of-Day	1300	19.5	739.9	8.03	0.974	8.04	7.83

\*Initial meter calibration

Theoretical DO = DO from "Dissolved Oxygen Meter Calibration Verification" Table at ambient temp X Correction Factor at Barometric Pressure  
Theoretical DO and Meter DO reading within  $\pm 0.5$  mg/l, if not recalibrate meter.

## **Coronavirus (“COVID-19”) Safety Precaution Certification for Duke Energy Site Entry**

### **JOB AID**

1. Please get the latest form by going to the main portal page and clicking on Updates on the company's COVID-19 preparations. In the middle of the page under “More Information” you will find the “Coronavirus (“COVID-19”) Safety Precaution Certification for Duke Energy Site Entry” form link.

*Please refer to the CDC Level 3 country list (link) <https://wwwnc.cdc.gov/travel/notices>*

*Please refer to the CDC Domestic Travel Advisory: <https://www.cdc.gov/coronavirus/2019-ncov/travelers/travel-in-the-us.html>*

2. This form must be completed by external visitors to Duke Energy facilities who do not have a Duke Energy badge.
3. This form will be available to visitors at Security / reception desks at all Duke Energy facilities. For facilities without security officers, business unit Administrative Assistants should work with building occupants to make sure anyone that meets the above criteria completes the form and meets the access criteria below prior to entering the building.
4. To grant access to Duke Energy facilities, the entire form must be completed AND question 1 and 2 cannot contain a CDC Level 3 country (see link above), OR traveled to an area in the U.S. that is/was under a CDC domestic travel advisory or state advisory at the time of travel within 14 days of arriving at a Duke Energy facility, whether for business or personal purposes (follow state guidelines where they are more restrictive), AND questions 3 and 4 must be answered with a “NO” AND question 5 must be answered with a “YES”.
5. If a visitor declines to complete the form, they are not allowed access to the Duke Energy facility.
6. If a visitor is denied access due to #4 or #5 above, consider rescheduling the meeting with the visitor via video or teleconference at a future date.
7. If a visitor has been denied access and refuses to leave, efforts should be made to encourage a voluntary resolution. If the issues cannot be resolved, the Enterprise Security Command Center should be contacted at (800) 951-9924.
8. These forms should be treated as confidential. The Duke Energy Host should e-mail completed forms to Enterprise Protective Services at [VisitorQuestionnaire@Duke-Energy.com](mailto:VisitorQuestionnaire@Duke-Energy.com).
9. Emergency responders (LE, Fire, EMS, etc.) are granted an exception to this process if they are visiting a Duke Energy facility to respond to an emergency.

## Coronavirus ("COVID-19") Safety Precaution Certification for Duke Energy Site Entry

Visitors to Duke Energy facilities who do not have a Duke Energy badge are required to complete the COVID-19 questionnaire. This form must be completed for each visitor each business day they visit a Duke Energy facility. The visitor is responsible for notifying their Duke Energy point of contact if they begin to show symptoms of COVID-19 or are diagnosed with COVID-19 within 14 days following their visit.

1. Have you or any member of your household visited a country outside the United States OR traveled to an area in the U.S. that is/was under a CDC domestic travel advisory or state advisory at the time of travel within 14 days of arriving at a Duke Energy facility, whether for business or personal purposes? Follow state guidelines where they are more restrictive.

YES\*  NO If YES, what country/state/city? \_\_\_\_\_ Return date: \_\_\_\_\_

\*If YES please refer to Job Aid on reverse side of this form for next steps

2. To the best of your knowledge, have you been in contact (physical contact of 6 feet or less for greater than 3 minutes) with anyone who has traveled outside the United States, OR traveled to an area in the U.S. that is/was under a CDC domestic travel advisory or state advisory at the time of travel within 14 days of arriving at a Duke Energy facility, whether for business or personal purposes? Follow state guidelines where they are more restrictive.

YES\*  NO If YES, what country/state/city? \_\_\_\_\_ Return date: \_\_\_\_\_

\*If YES please refer to Job Aid on reverse side of this form for next steps

3. To the best of your knowledge, have you been in contact (physical contact of 6 feet or less) with anyone that has tested positive for COVID-19 or is suspected of having COVID-19, within the past 14 days?

YES\*  NO \*If YES please refer to Job Aid on reverse side of this form for next steps

4. Do you have a fever, cough, or shortness of breath at this time, or have you had these symptoms in the last 14 days?

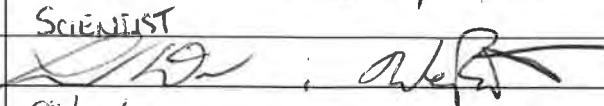

YES\*  NO \*If YES please refer to Job Aid on reverse side of this form for next steps

5. Please confirm, by reading the list below, you have been instructed in the following hygiene practices designed to inhibit the spread of the COVID-19:

YES  NO\* \*If NO please refer to Job Aid on reverse side of this form for next steps

- Wash hands often with soap and water for at least 20 seconds. If soap and water are not available, use an alcohol-based hand sanitizer that contains at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Cover a cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces.
- Stay at home when sick and seek appropriate medical care.

**CAUTION:** Individuals should not enter Duke Energy facilities if they are experiencing any symptoms of a respiratory illness (fever, cough, shortness of breath, or other flu-like symptoms).

Visiting Company	Syntexis CHPD
Visitor First and Last Name	LEE DRAGO ; Wesley Prater
Visitor Title	Scientist
Signature	
Date	04/05/21
Duke Energy Location	BRAZELTON MLP
Duke Energy Host First and Last Name	RICK POWELL
** Allowed Entry (Yes / No)	Yes

\*\* To be completed by Duke Energy Host

Duke Energy Host, please scan and e-mail this form to [VisitorQuestionnaire@Duke-Energy.com](mailto:VisitorQuestionnaire@Duke-Energy.com) within 3 business days.

LABORATORY ANALYTICAL REPORTS

(Provided as part of complete pdf on  
attached CD)

Science & Engineering Consultants

April 21, 2021

Program Manager  
Duke Energy  
13339 Hagers Ferry Road  
Bldg. 7405 MG30A2  
Huntersville, NC 28078

RE: Project: FORMER BRAMLETT J21020660  
Pace Project No.: 92524326

Dear Program Manager:

Enclosed are the analytical results for sample(s) received by the laboratory on February 25, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

## PROJECT NARRATIVE

Project: FORMER BRAMLETTE J21020660

Pace Project No.: 92524326

---

**Method:** EPA 6010D

**Description:** 6010 MET ICP

**Client:** Duke Energy

**Date:** April 21, 2021

### General Information:

4 samples were analyzed for EPA 6010D by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 613328

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92524321001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3228029)
  - Calcium
  - Iron
  - Magnesium
  - Manganese

R1: RPD value was outside control limits.

- MSD (Lab ID: 3228030)
  - Calcium
  - Iron
  - Magnesium
  - Manganese

### Additional Comments:

## REPORT OF LABORATORY ANALYSIS

## PROJECT NARRATIVE

Project: FORMER BRAMLETTE J21020660

Pace Project No.: 92524326

---

**Method:** EPA 8270E

**Description:** 8270E RVE

**Client:** Duke Energy

**Date:** April 21, 2021

### General Information:

4 samples were analyzed for EPA 8270E by Pace Analytical Services Charlotte. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

H2: Extraction or preparation conducted outside EPA method holding time.

- EB-03\_WQ\_20210224 (Lab ID: 92524326003)
- FB-02\_WQ\_20210224 (Lab ID: 92524326004)
- MW-49BR\_WG\_55\_20210224 (Lab ID: 92524326002)
- MW-49BR\_WG\_70\_20210224 (Lab ID: 92524326001)

### Sample Preparation:

The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

QC Batch: 614182

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

- BLANK (Lab ID: 3232412)
- Butylbenzylphthalate
- EB-03\_WQ\_20210224 (Lab ID: 92524326003)
- Butylbenzylphthalate
- LCS (Lab ID: 3232413)
- Butylbenzylphthalate
- MS (Lab ID: 3232414)
- 2-Nitrophenol
- bis(2-Chloroethyl) ether
- MSD (Lab ID: 3232415)
- 2-Nitrophenol
- bis(2-Chloroethyl) ether
- MW-49BR\_WG\_55\_20210224 (Lab ID: 92524326002)
- Butylbenzylphthalate
- MW-49BR\_WG\_70\_20210224 (Lab ID: 92524326001)
- 2-Nitrophenol
- bis(2-Chloroethyl) ether

v2: The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

- MW-49BR\_WG\_70\_20210224 (Lab ID: 92524326001)

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

QC Batch: 614182

v2: The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

- Aniline

v3: The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have low bias.

- MS (Lab ID: 3232414)
  - Aniline
- MSD (Lab ID: 3232415)
  - Aniline

QC Batch: 614509

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

- FB-02\_WQ\_20210224 (Lab ID: 92524326004)
  - 4-Bromophenylphenyl ether

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

QC Batch: 614182

S5: Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

- MW-49BR\_WG\_70\_20210224 (Lab ID: 92524326001)
  - 2-Fluorophenol (S)

QC Batch: 614509

S0: Surrogate recovery outside laboratory control limits.

- BLANK (Lab ID: 3234087)
  - 2-Fluorophenol (S)

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 614182

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92532666002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3232414)

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: FORMER BRAMLETTE J21020660

Pace Project No.: 92524326

---

**Method:** EPA 8260D

**Description:** 8260 MSV Low Level SC

**Client:** Duke Energy

**Date:** April 21, 2021

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 614060

L1: Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

- LCS (Lab ID: 3231906)
- Vinyl acetate

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 614060

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92524326002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3231907)
  - Naphthalene
- MSD (Lab ID: 3231908)
  - Naphthalene

### Additional Comments:

Analyte Comments:

QC Batch: 613412

1g: Sample was moved to an uncontrolled temperature environment 21 days after collection.

- FB-02\_WQ\_20210224 (Lab ID: 92524326004)
  - 4-Bromofluorobenzene (S)

## QUALIFIERS

Project: FORMER BRAMLETTE J21020660

Pace Project No.: 92524326

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- 1g      Sample was moved to an uncontrolled temperature environment 21 days after collection.
- D3      Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
- H1      Analysis conducted outside the EPA method holding time.
- H2      Extraction or preparation conducted outside EPA method holding time.
- H3      Sample was received or analysis requested beyond the recognized method holding time.
- IK      The recalculated concentration of the calibration standard(s) did not meet method acceptance criteria; this result should be considered an estimated value.
- L1      Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
- M1      Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M6      Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- R1      RPD value was outside control limits.
- S0      Surrogate recovery outside laboratory control limits.
- S5      Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).
- pH      Post-analysis pH measurement indicates insufficient VOA sample preservation.
- v1      The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.
- v2      The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

## REPORT OF LABORATORY ANALYSIS

## QUALIFIERS

Project: FORMER BRAMLETTE J21020660  
Pace Project No.: 92524326

---

### ANALYTE QUALIFIERS

- v3 The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have low bias.

RE: Project: FORMER BRAMLETTE MGP J21030496  
Pace Project No.: 92527960

Dear Program Manager:

Enclosed are the analytical results for sample(s) received by the laboratory on March 16, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: FORMER BRAMLETT MGP J21030496

Pace Project No.: 92527960

---

**Method:** EPA 6010D

**Description:** 6010 MET ICP

**Client:** Duke Energy

**Date:** March 26, 2021

### **General Information:**

3 samples were analyzed for EPA 6010D by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### **Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

### **Sample Preparation:**

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### **Initial Calibrations (including MS Tune as applicable):**

All criteria were within method requirements with any exceptions noted below.

### **Continuing Calibration:**

All criteria were within method requirements with any exceptions noted below.

### **Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### **Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### **Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

### **Additional Comments:**

## PROJECT NARRATIVE

Project: FORMER BRAMLETTE MGP J21030496

Pace Project No.: 92527960

---

**Method:** **EPA 8270E**

**Description:** 8270E RVE

**Client:** Duke Energy

**Date:** March 26, 2021

### General Information:

16 samples were analyzed for EPA 8270E by Pace Analytical Services Charlotte. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

QC Batch: 607656

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

- BLANK (Lab ID: 3201093)
- Butylbenzylphthalate
- LCS (Lab ID: 3201094)
- Butylbenzylphthalate
- MS (Lab ID: 3201095)
- Butylbenzylphthalate
- MSD (Lab ID: 3201096)
- Butylbenzylphthalate
- MW-29BR\_WG\_20210315 (Lab ID: 92527960016)
- Butylbenzylphthalate

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

QC Batch: 607212

S0: Surrogate recovery outside laboratory control limits.

- MSD (Lab ID: 3198854)
- 2,4,6-Tribromophenol (S)

S3: Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated sample.

- BLANK (Lab ID: 3198851)
- Terphenyl-d14 (S)
- MW-25R\_WG\_20210315 (Lab ID: 92527960005)

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 607212

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92527960009

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MSD (Lab ID: 3198854)
- 4-Bromophenylphenyl ether
- Benzoic Acid

R1: RPD value was outside control limits.

- MSD (Lab ID: 3198854)
- 2,4-Dinitrophenol
- Aniline
- Hexachlorocyclopentadiene

QC Batch: 607656

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92527967008

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3201095)
- Benzoic Acid
- MSD (Lab ID: 3201096)
- 4-Bromophenylphenyl ether
- Benzoic Acid

R1: RPD value was outside control limits.

- MSD (Lab ID: 3201096)

## QUALIFIERS

Project: FORMER BRAMLETTE MGP J21030496

Pace Project No.: 92527960

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- IK      The recalculated concentration of the calibration standard(s) did not meet method acceptance criteria; this result should be considered an estimated value.
- M1     Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- R1     RPD value was outside control limits.
- S0     Surrogate recovery outside laboratory control limits.
- S3     Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated sample.
- S5     Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).
- v1    The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.
- v2    The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.
- v3    The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have low bias.

RE: Project: FORMER BRAMLETTE  
Pace Project No.: 92527376

Dear Program Manager:

Enclosed are the analytical results for sample(s) received by the laboratory on March 12, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tyler Forney for  
Kevin Herring

## PROJECT NARRATIVE

Project: FORMER BRAMLETT  
Pace Project No.: 92527376

---

**Method:** EPA 6010D  
**Description:** 6010 MET ICP  
**Client:** Duke Energy  
**Date:** March 22, 2021

### **General Information:**

2 samples were analyzed for EPA 6010D by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### **Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

### **Sample Preparation:**

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### **Initial Calibrations (including MS Tune as applicable):**

All criteria were within method requirements with any exceptions noted below.

### **Continuing Calibration:**

All criteria were within method requirements with any exceptions noted below.

### **Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### **Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### **Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 607050

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92527376006

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3198349)
  - Iron
  - Manganese
- MSD (Lab ID: 3198350)
  - Iron
  - Manganese

Pace Project No.: 92527376

---

**Method:** EPA 8270E

**Description:** 8270E RVE

**Client:** Duke Energy

**Date:** March 22, 2021

### General Information:

15 samples were analyzed for EPA 8270E by Pace Analytical Services Charlotte. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

QC Batch: 606478

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

- MW-2TZ\_WG\_20210310 (Lab ID: 92527376001)
- 2-Nitrophenol

v2: The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

- MW-2TZ\_WG\_20210310 (Lab ID: 92527376001)
- Pentachlorophenol

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

QC Batch: 606478

S0: Surrogate recovery outside laboratory control limits.

- LCS (Lab ID: 3195260)
- 2,4,6-Tribromophenol (S)

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Method:** EPA 8270E by SIM

**Description:** 8270E Low Volume PAH SIM

**Client:** Duke Energy

**Date:** March 22, 2021

### General Information:

15 samples were analyzed for EPA 8270E by SIM by Pace Analytical Services Charlotte. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3511 with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

QC Batch: 606504

S2: Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

- MS (Lab ID: 3195357)
  - Nitrobenzene-d5 (S)
- MSD (Lab ID: 3195358)
  - Nitrobenzene-d5 (S)
- MW-2TZ\_WG\_20210310 (Lab ID: 92527376001)
  - Nitrobenzene-d5 (S)

S5: Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

- MW-2BR\_WG\_20210310 (Lab ID: 92527376002)
  - Nitrobenzene-d5 (S)

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: FORMER BRAMLETT  
Pace Project No.: 92527376

---

**Method:** **EPA 9060A**  
**Description:** Total Organic Carbon, Asheville  
**Client:** Duke Energy  
**Date:** March 22, 2021

**General Information:**

2 samples were analyzed for EPA 9060A by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

## QUALIFIERS

Project: FORMER BRAMLETT  
Pace Project No.: 92527376

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- IK The recalculated concentration of the calibration standard(s) did not meet method acceptance criteria; this result should be considered an estimated value.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- R1 RPD value was outside control limits.
- S0 Surrogate recovery outside laboratory control limits.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).
- v1 The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.
- v2 The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.
- v3 The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have low bias.

RE: Project: FORMER BRAMLETTE MGP J21030499  
Pace Project No.: 92528627

Dear Program Manager:

Enclosed are the analytical results for sample(s) received by the laboratory on March 18, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tyler Forney for  
Kevin Herring

## PROJECT NARRATIVE

Project: FORMER BRAMLETT MGP J21030499

Pace Project No.: 92528627

---

**Method:** EPA 6010D

**Description:** 6010 MET ICP

**Client:** Duke Energy

**Date:** March 29, 2021

### **General Information:**

7 samples were analyzed for EPA 6010D by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### **Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

### **Sample Preparation:**

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### **Initial Calibrations (including MS Tune as applicable):**

All criteria were within method requirements with any exceptions noted below.

### **Continuing Calibration:**

All criteria were within method requirements with any exceptions noted below.

### **Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### **Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### **Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

### **Additional Comments:**

---

**Method:** **EPA 8270E**

**Description:** 8270E RVE

**Client:** Duke Energy

**Date:** March 29, 2021

### **General Information:**

16 samples were analyzed for EPA 8270E by Pace Analytical Services Charlotte. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### **Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

### **Sample Preparation:**

The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

### **Initial Calibrations (including MS Tune as applicable):**

All criteria were within method requirements with any exceptions noted below.

### **Continuing Calibration:**

All criteria were within method requirements with any exceptions noted below.

### **Internal Standards:**

All internal standards were within QC limits with any exceptions noted below.

### **Surrogates:**

All surrogates were within QC limits with any exceptions noted below.

QC Batch: 608184

S0: Surrogate recovery outside laboratory control limits.

- MW-21BRL\_WG\_20210317 (Lab ID: 92528627004)
- Terphenyl-d14 (S)

### **Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### **Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### **Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 608184

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92528627005

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3203916)
- Benzoic Acid

R1: RPD value was outside control limits.

- MSD (Lab ID: 3203917)

## QUALIFIERS

Project: FORMER BRAMLETTE MGP J21030499

Pace Project No.: 92528627

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- IK      The recalculated concentration of the calibration standard(s) did not meet method acceptance criteria; this result should be considered an estimated value.
- M1     Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M6     Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- R1     RPD value was outside control limits.
- S0     Surrogate recovery outside laboratory control limits.
- S5     Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).
- v2    The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.
- v3    The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have low bias.

RE: Project: FORMER BRAMLETTE MGP J21030495  
Pace Project No.: 92527577

Dear Program Manager:

Enclosed are the analytical results for sample(s) received by the laboratory on March 12, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: FORMER BRAMLETTE MGP J21030495

Pace Project No.: 92527577

---

**Method:** EPA 6010D

**Description:** 6010 MET ICP

**Client:** Duke Energy

**Date:** March 22, 2021

### General Information:

4 samples were analyzed for EPA 6010D by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 607050

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92527376006

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3198349)
  - Iron
  - Manganese
- MSD (Lab ID: 3198350)
  - Iron
  - Manganese

---

**Method:** **EPA 8270E**

**Description:** 8270E RVE

**Client:** Duke Energy

**Date:** March 22, 2021

### General Information:

26 samples were analyzed for EPA 8270E by Pace Analytical Services Charlotte. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

QC Batch: 606974

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

- BLANK (Lab ID: 3197928)
- 2-Nitrophenol
- LCS (Lab ID: 3197929)
- 2-Nitrophenol
- MS (Lab ID: 3197930)
- 2-Nitrophenol
- MSD (Lab ID: 3197931)
- 2-Nitrophenol
- MW-7R\_WG\_20210311 (Lab ID: 92527577001)
- 2-Nitrophenol

QC Batch: 607096

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

- MS (Lab ID: 3198461)
- 2-Nitrophenol
- MSD (Lab ID: 3198462)
- 2-Nitrophenol

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: FORMER BRAMLETTE MGP J21030495

Pace Project No.: 92527577

---

**Method:** **SM 4500-S2D-2011**

**Description:** 4500S2D Sulfide Water

**Client:** Duke Energy

**Date:** March 22, 2021

**General Information:**

4 samples were analyzed for SM 4500-S2D-2011 by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 606776

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92526603002,92527577024

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3196855)
  - Sulfide
- MSD (Lab ID: 3196856)
  - Sulfide

**Additional Comments:**

## QUALITY CONTROL DATA

Project: FORMER BRAMLETTE MGP J21030495

Pace Project No.: 92527577

METHOD BLANK: 3197928

Matrix: Water

Associated Lab Samples: 92527577001, 92527577002, 92527577003, 92527577004, 92527577005, 92527577006, 92527577007,  
92527577008, 92527577009, 92527577010, 92527577011, 92527577012, 92527577013, 92527577014,  
92527577015, 92527577016, 92527577017, 92527577018, 92527577019, 92527577020

Parameter	Units	Blank	Reporting	MDL	Analyzed	Qualifiers
		Result	Limit			
bis(2-Ethylhexyl)phthalate	ug/L	ND	6.0	3.7	03/17/21 10:10	
Butylbenzylphthalate	ug/L	ND	10.0	3.1	03/17/21 10:10	
Chrysene	ug/L	ND	10.0	2.8	03/17/21 10:10	
Di-n-butylphthalate	ug/L	ND	10.0	2.2	03/17/21 10:10	
Di-n-octylphthalate	ug/L	ND	10.0	3.9	03/17/21 10:10	
Dibenz(a,h)anthracene	ug/L	ND	10.0	3.0	03/17/21 10:10	
Dibenzofuran	ug/L	ND	10.0	2.1	03/17/21 10:10	
Diethylphthalate	ug/L	ND	10.0	2.0	03/17/21 10:10	
Dimethylphthalate	ug/L	ND	10.0	2.1	03/17/21 10:10	
Fluoranthene	ug/L	ND	10.0	2.2	03/17/21 10:10	
Fluorene	ug/L	ND	10.0	2.1	03/17/21 10:10	
Hexachlorobenzene	ug/L	ND	10.0	2.2	03/17/21 10:10	
Hexachlorocyclopentadiene	ug/L	ND	10.0	1.6	03/17/21 10:10	
Hexachloroethane	ug/L	ND	10.0	1.4	03/17/21 10:10	
Indeno(1,2,3-cd)pyrene	ug/L	ND	10.0	2.9	03/17/21 10:10
