Re: ABC+ Pilot Study Report dated May 1, 2017
WestPoint Home (Formerly WestPoint Stevens) Clemson Site
Oconee County
Consent Agreement 06-163-W
File #20395 (Formerly Site ID# 00895)

Dear Mr. Lanier,

The Department has reviewed the referenced submittal and offers the following comments:

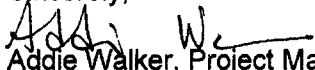

1. Pre-injection isoconcentration maps are included in the referenced submittal, however, there are no post injection isoconcentration or posted maps included. Please construct and submit these.
2. It appears that certain distribution information of the injectate was revealed during the pilot study, however, evidence of contaminant remediation was lacking. Some of the contaminant concentrations decreased but some increased and no discussion of these trends were discussed. Therefore, the results of the study at this time are inconclusive.
3. The Department recommends an additional VOC sampling event be conducted to determine effects of the injectate on the contamination itself.
4. The report notes areas where injection was not successful. How are these areas to be remediated?
5. How long does the injectate last in the subsurface?
6. It appears that monitoring well RMW-2 consistently has an extremely high pH. The reason for this should be determined as this may be affecting the efficacy of the data from this well. A discussion on this issue should be included in the referenced report.

62

Please submit a report including recent sampling results of the Pilot Study monitoring well network, in addition to the above requested information, to my attention, on or before December 15, 2017. Please feel free to contact me with any questions or comments at walker@dhc.sc.gov or at (803)898-0722.

Sincerely,

Addie Walker, Project Manager
State Voluntary Cleanup Program
Bureau of Land and Waste Management
