

Notice of Environmental Cleanup Activity
and
Availability of Administrative Record

Norfolk Southern Railway – Wayne St. Site
1001 Wayne Street, Columbia, SC

The Norfolk Southern Railway Company (NSRC) Wayne Street Site (Site) is a vacant property that was historically used as a railroad depot, a fertilizer bagging facility, and an automotive scrap yard. Soil at the Site is known to be contaminated with lead and arsenic. Groundwater at the Site also contains lead, but is not used as drinking water. In 2016, NSRC entered into a Voluntary Cleanup Contract (VCC) with the South Carolina Department of Health and Environmental Control (DHEC) to conduct a soil removal. Additional information about this site may be found at the webpage below. Excavation, treatment and off-site disposal of contaminated soil is planned to begin in mid-to-late June 2017, and is expected to last 8 to 12 weeks. Air monitoring will be conducted during the removal. **During this time you may see or hear workers and equipment at the Site, and notice increased traffic flow on Wayne Street and Pendleton Street.**
